Portfolio Manager Commentary

Fund Performance

The fund's NAV rose 0.90% to end April at \$14.54. Based on NAV, the fund's total return, which includes the monthly dividend of 8.375 cents per share, was 1.49%. The fund's common market price increased 4.91% over the month to end at \$14.75. Based on the common market price, the fund's total return for April was 5.52%.

The share price ended the month at a premium of 1.44% relative to NAV, in contrast to the discount of 2.43% at the end of March. Trading volume of FMN's common shares on the NYSE averaged about 9,100 shares per day, up from 8,700 last month.

The annualized current yield of the fund relative to its month-end closing market price was 6.81%, which equates to 11.09% on a taxable equivalent basis for shareholders in the 38.6% federal tax bracket.

Municipal Market

Edgar Filing: FEDERATED PREMIER MUNICIPAL INCOME FUND - Form 8-K

The military success of U.S. forces in Iraq allowed market participants to refocus on the economy during April. Anticipation of accelerating economic growth following the end of fighting in Iraq seemed to diminish in the face of generally weak economic data. Treasury and municipal yields rose early in April as imminent military success was clear, but reversed course as signs of economic acceleration failed to emerge. On net, the AAA 10-year yield fell 7 basis points to 3.54% during April, and yields across the municipal yield curve fell from 1 to 14 basis points. (All yields from Municipal Market Data).

Seasonal upward pressure on short-term municipal yields during tax season contributed to a slight flattening in the slope of the municipal yield curve, with the difference between one-year and 20-year AAA yields ending April at 335 basis points, down from 350 basis points last month. The tepid pace of economic recovery continues to underpin the ongoing steep slope of the yield curve.

The total return on the Lehman Brothers Aggregate Municipal Bond Index was 0.66% for the month. The healthcare, education and insured segments of the index were the three strongest performing credit sectors. Holdings in these sectors contributed to the fund's positive performance in April and cumulatively represent over 75% of the fund portfolio.

Investment Strategy

The portfolio management team continued to evaluate opportunities to increase fund holdings of bonds rated BBB or lower, consistent with the fund's income objective. The fund purchased such securities in the hospital, life care and special tax sectors during the month. The use of leverage continues to enhance the fund's ability to pay attractive dividends to common shareholders. The fund paid an average of 1.19% in preferred share dividends during April, while the capital contributed by preferred shareholders was invested in the fund's portfolio of long-term bonds, which had an average yield to effective maturity of 5.53% for the month.

*Taxable Equivalent Market Yields - In calculating these yields, the market yield is divided by (1 minus the applicable tax rate). The maximum federal tax rate (38.6%) is used when calculating the taxable equivalent market yield. Federal Tax Rates are based on the 2003 rates as stated in the Economic Growth and Tax Relief Reconciliation Act of 2001.

**Duration is a measure of a security's price sensitivity to changes in interest rates. Securities with longer durations are more sensitive to changes in interest rates than securities of shorter durations. The Fund is a closed-end fund. Unlike open-end funds, closed-end funds are not continually offered. There is a one-time public offering, and once issued, shares of closed-end funds are bought and sold in the open market. Consequently, shares of closed-end funds may trade at, above or below their net asset values ("NAV"). If a closed-end fund's shares trade at a price below their NAV, they are said to be trading at a "discount." Conversely, if a closed-end fund's shares trade at a price above their NAV, they are said to be trading at a "premium." Shares of closed-end funds frequently trade at a discount.

The Fund offers Common Shares and Preferred Shares. The Pricing, Yield, Dividends, Fund History and Total Return information provided herein relates to Common Shares only. Unlike Preferred Shares, Common Shares are not rated.

The Fund's issuance of Preferred Shares creates leverage risks for holders of Common Shares. Two major types of risks created by leverage include: (1) the likelihood of greater volatility of NAV and market price of Common Shares, because changes in the value of the Fund's portfolio securities are borne

Edgar Filing: FEDERATED PREMIER MUNICIPAL INCOME FUND - Form 8-K

entirely by holders of Common Shares; and (2) the possibility either that income available for Common Share dividends will fall if the Preferred Shares dividend rate rises, or that income available for Common Shares dividends will fluctuate because the Preferred Shares dividend rate varies.

The Fund invests in high-yield, lower-rated securities that generally entail greater market, credit and liquidity risks than investment-grade securities. Please refer to the Fund's prospectus for more information on the risks associated with an investment in the Fund.

Income may be subject to state and local taxes.

Past performance is no guarantee of future results. Total return, price, yields, and NAV will fluctuate. Total returns of less than 1 year are cumulative.

Portfolio composition is subject to change.

Credit ratings pertain only to the securities in the Fund's portfolio and do not protect the Fund against market risk.

For additional information, including definitions of related terms and indexes, see the Financial Glossary and Benchmark Index Glossary.

The Fund's Common Shares are only available for purchase and sale on the New York Stock Exchange at the current market price. Common Shares may trade at a discount to NAV. Total return data assumes full reinvestment of dividends. Consult your investment professional for further information.
