Dear Shareholder:

For corporate bond investors, fiscal year 2011 began where fiscal year 2010 ended: with gains. This advance was powered by continued economic expansion in both the United States and around the world.

Six Months in Review

For the six-month period ended April 30, 2011:

Hans W. Kertess
Chairman

- PIMCO Corporate Income Fund rose 8.25% on net asset value (NAV) and 14.22% on market price.
- PIMCO Income Opportunity Fund rose 9.36% on NAV and 16.16% on market price.

The U.S. economy, as measured by gross domestic product (GDP), expanded at an annualized rate of 3.1% between October and December 2010. This eased to a rate of 1.8% between January and March of 2011, held back in large part by continued weakness in the housing market, rising prices for energy and other commodities, and a stubbornly high unemployment rate.

Brian S. Shlissel
President & CEO

Despite these headwinds, U.S. corporations continue to show an impressive resilience. Since the recession ended in 2009, corporate profits have grown by double-digits for seven consecutive quarters. Even more encouraging, these profits were generally derived from growing revenue, as opposed to reducing costs. This top-line growth suggests increasing confidence among American consumers, who comprise approximately two-thirds of U.S. economic activity. It also suggests continued, if not increasing, global demand for the goods and services provided by U.S. firms.

The U.S. Federal Reserve (the Fed) maintained a cautious stance throughout the six-month period. Last fall, it embarked on a \$900 billion program to purchase U.S. Treasury bonds, the goal of which was to stimulate the economy by pushing already low interest rates even lower. Although certain analysts have expressed concern about what the scheduled June 2011 end of this quantitative easing program could mean for the U.S. economy, Fed Chairman Ben Bernanke has indicated it is unlikely to have significant effects. In addition, despite rising energy and food prices, the Fed believes that overall inflation trends are likely to remain subdued and revealed that it would maintain the federal funds rate near zero for an extended period.

The Road Ahead

The U.S. economic recovery is about to enter its third consecutive year. However, as the slowdown between January and March of 2011 reflects, this rebound has been more tepid than recoveries from prior recessions. We expect this modest pace to continue. Given the continued reluctance to hire workers in significant numbers, many U.S. companies seem to agree. Rather than spend on new employees, companies are stockpiling cash. At the end of 2010, U.S. companies held an estimated \$1.9 trillion, the highest amount since 1963. With so much cash on hand, companies can easily meet their debt obligations to bondholders which has resulted in a decline in defaults. That being said, credit risk is but one factor that investors in corporate bonds must be mindful of. If the economy were to strengthen more than anticipated, interest rates could rise quickly, increasing borrowing costs. Furthermore, since many U.S. corporations derive an increasing percentage of revenue from abroad, currency risk and geopolitical risk are other ongoing concerns.

For specific information on the Funds and their performance, please review the following pages. If you have any questions regarding the information provided, we encourage you to contact your financial advisor or call the Funds' shareholder servicing agent at (800) 254-5197. In addition, a wide range of information and resources are available on our website, www.allianzinvestors.com/closedendfunds.

Together with Allianz Global Investors Fund Management LLC, the Funds' investment manager, and Pacific Investment Management Company LLC (PIMCO), the Funds' sub-adviser, we thank you for investing with us.

We remain dedicated to serving your investment needs.

Sincerely,

Hans W. Kertess

PIMCO Corporate Income Fund Fund Insights

April 30, 2011 (unaudited)

For the six months ended April 30, 2011, PIMCO Corporate Income Fund returned 8.25% on net asset value (NAV) and 14.22% on market price.

The U.S. corporate bond market posted a positive return during the reporting period and outperformed equal-duration Treasuries. Supporting corporate bond prices were generally strong corporate profits, strengthening corporate balance sheets and overall solid demand from investors seeking to generate incremental yield in the low interest rate environment. In addition, corporate default rates, which had moved sharply higher during the credit crisis, continued to decline during the six months ended April 30, 2011.

Compared to the relatively flat 0.02% return for the overall U.S. fixed income market (as measured by the Barclays Capital U.S. Aggregate Index), high yield and investment grade bonds returned 6.15% and 0.56%, respectively (as measured by the Barclays Capital U.S. High Yield and Barclays Capital Credit Investment Grade Indices) for the six-month reporting period. Given investors' quest for yield, on a total return basis, lower rated, higher yielding corporate bonds generally outperformed their higher quality, lower yielding counterparts. For example, AA-, A- and BBB-rated issues returned 0.16%, 0.75% and 0.91%, respectively, during the six months ended April 30, 2011. The same trend held true in the high yield market, as BB-rated issues returned 4.30%, versus 6.02% for B-rated names.

Duration and sector positioning drive results

The Fund generated a strong absolute return during the reporting period. An emphasis on the banking sector was a significant positive for results, as these issues were among the best performers during the six months ended April 30, 2011. An emphasis on insurance, particularly life insurance credits, was also rewarded as this sector posted solid gains. In contrast, underweights to the energy sector and consumer cyclicals detracted from results as they outperformed the market.

PIMCO Corporate Income Fund

4 PIMCO Income Opportunity Fund Semi-Annual Report | 4.30.11

PIMCO Income Opportunity Fund, Inc. Fund Insights

April 30, 2011 (unaudited)

For the six months ended April 30, 2011, PIMCO Income Opportunity Fund, Inc. returned 9.36% on net asset value (NAV) and 16.16% on market price.

It was a challenging period for certain segments of the fixed income market. Yields across the Treasury curve moved sharply higher as two-year Treasuries increased from 0.34% to 0.61% and 10-year Treasuries from 2.63% to 3.32%. This rise in rates is attributable to a number of factors, including mounting inflationary pressures due to sharply higher oil and food prices, strong manufacturing activity signs that the labor market was improving.

The spread sectors (non-U.S. Treasuries) posted positive returns during the reporting period and generally outperformed equal-duration Treasuries. Supporting the spread sectors was continuing positive economic growth, relatively benign core inflation and improving corporate profits. In addition, overall, there was solid demand from investors seeking to generate incremental yield in the low interest rate environment. Given investors' quest for yield, lower rated, higher yielding securities generally outperformed their higher quality, lower yielding counterparts during the six-month period. For example, compared to the relatively flat 0.02% return for the overall U.S. fixed income market (as measured by the Barclays Capital U.S. Aggregate Index), high yield and investment grade bonds returned 6.15% and 0.56%, respectively (as measured by the Barclays Capital U.S. High Yield and Barclays Capital Credit Investment Grade Indices) for the six-month period.

Strong sector positioning enhances performance

The Fund's relatively large allocation to high quality, senior, commercial mortgage-backed securities (CMBS) enhanced performance, as the Barclays Capital CMBS Index returned 5.51% during the six-month period ended April 30, 2011. An overweighting to high yield life insurance credits was rewarded, as this component of the BofA Merrill Lynch BB-B High Yield Index gained 11.31% during the reporting period. Price appreciation in the

PIMCO Income Opportunity Fund, Inc. Fund Insights

April 30, 2011 (unaudited) (continued)

equity markets generally supported these issuers' equity-linked products sales, account values and overall reserve ratios.

The Fund's overweight credit exposure to finance companies was a positive for performance as these companies benefited from improved liquidity and earnings. Both high yield and investment grade finance companies' bonds outperformed the overall corporate market during the period. An overweighting to national money center high quality banking credits was also beneficial for performance. These banks are generally very well capitalized and have been able to generate high levels of capital through retained earnings. Security selection of both investment grade and high yield airline bonds, as well as an overweight to the airline industry were positive for results. The Fund's airline bonds offered attractive recovery prospects in the case of default due to specific collateral coverage. An underweighting to investment grade sovereign and supranational credits enhanced performance. Within the Barclays Capital U.S. Credit Index, sovereign and supranational credits, which have historically offered a relatively less compelling risk return profile than corporate bonds, returned -0.16% and 0.13%, respectively, during the six months ended April 30, 2011.

An allocation to emerging markets detracted from performance, as the JPMorgan EMBI Global Index returned -1.17% during the reporting period. Despite a nice rebound during the last three months of the period, it was not enough to offset the weak performance experienced in late 2010. An underweighting to high yield media-related credits also dragged relative performance as media bonds within the BofA Merrill Lynch U.S. BB-B High Yield Index gained a solid 4.75% during the period.

(1) **Past performance is no guarantee of future results.** Total return is calculated by determining the percentage change in NAV or market price (as applicable) in the specified period. The calculation assumes that all income dividends, capital gain and return of capital distributions, if any, have been reinvested. Total return does not reflect broker commissions or sales charges in connection with the purchase or sale of Fund shares. Total return for a period of less than one year is not annualized. Total return for a period of more than one year represents the average annual total return.

Edgar Filing: PIMCO CORPORATE INCOME FUND - Form N-CSRS

Performance at market price will differ from its results at NAV. Although market price returns typically reflect investment results over time, during shorter periods returns at market price can also be influenced by factors such as changing views about the Funds, market conditions, supply and demand for each Fund's shares, or changes in Fund dividends.

An investment in the Funds involves risk, including the loss of principal. Total return, market price, market price yield and NAV will fluctuate with changes in market conditions. This data is provided for information purposes only and is not intended for trading purposes. Closed-end funds, unlike open-end funds, are not continuously offered. There is a onetime public offering and once issued, shares of closed-end funds are traded in the open market through a stock exchange. NAV is equal to total assets attributable to common shareholders less total liabilities divided by the number of common shares outstanding. Holdings are subject to change daily.

(2) Market Price Yield is determined by dividing the annualized current monthly per common share dividend (comprised of net investment income for Corporate Income and net investment income and short-term capital gains, if any, for Income Opportunity) payable to common shareholders by the market price per common share at April 30, 2011.

PIMCO Corporate Income Fund/PIMCO Income Opportunity Fund
Notes to Schedules of Investments

April 30, 2011 (unaudited) (continued)

- (a) Private Placement Restricted as to resale and may not have a readily available market. Securities with an aggregate value of \$196,217,084 and \$132,994,765, representing 22.0% of total investments for Corporate Income and 33.7% of net assets for Income Opportunity, respectively.
- (b) Illiquid.
- (c) These securities generally pay interest at rates which are periodically pre-determined by reference to a base lending rate plus a premium. These base lending rates are generally either the lending rate offered by one or more major European banks, such as the LIBOR or the prime rate offered by one or more major United States banks, or the certificate of deposit rate. These securities are generally considered to be restricted as the Funds are ordinarily contractually obligated to receive approval from the Agent bank and/or borrower prior to disposition. Remaining maturities of senior loans may be less than the stated maturities shown as a result of contractual or optional payments by the borrower. Such prepayments cannot be predicted with certainty. The interest rate disclosed reflects the rate in effect on April 30, 2011.
- (d) 144A Exempt from registration under Rule 144A of the Securities Act of 1933. These securities may be resold in transactions exempt from registration, typically only to qualified institutional buyers. Unless otherwise indicated, these securities are not considered to be illiquid.
- (e) In default.
- (f) Fair-Valued Securities with an aggregate value of \$8,346,652 and \$5,365,334, representing 0.9% of total investments for Corporate Income and 1.4% of net assets for Income Opportunity, respectively. See Note 1(a) and Note 1(b) in the Notes to Financial Statements.
- (g) Perpetual maturity. Maturity date shown is the first call date. On Corporate Bonds & Notes, the interest rate is fixed until the first call date and variable thereafter.
- (h) All or partial amount segregated for the benefit of the counterparty as collateral for derivatives.
- (i) All or partial amount segregated for the benefit of the counterparty as collateral for reverse repurchase agreements.
- (j) Restricted. The aggregate acquisition cost of such securities is \$26,011,220 and \$3,454,435 for Corporate Income and Income Opportunity, respectively. The aggregate market value is \$28,738,780 and \$3,599,335, representing 3.2% of total investments and 0.9% of net assets for Corporate Income and Income Opportunity, respectively.
- (k) Dividend rate is fixed until the first call date and variable thereafter.
- (l) Rates reflect the effective yields at purchase date.
- (m) Floating rate. The rate disclosed reflects the rate in effect on April 30, 2011.

**PIMCO Corporate Income Fund/PIMCO Income Opportunity Fund
Notes to Financial Statements**

April 30, 2011 (unaudited)

1. Organization and Significant Accounting Policies

PIMCO Corporate Income Fund (Corporate Income) and PIMCO Income Opportunity Fund (Income Opportunity), each the Fund and collectively the Funds , were organized as Massachusetts business trusts on October 17, 2001 and September 12, 2007, respectively. Prior to commencing operations on December 21, 2001 and November 30, 2007, respectively, the Funds had no operations other than matters relating to their organization and registration as diversified, and non-diversified, respectively, closed-end management investment companies registered under the Investment Company Act of 1940 and the rules and regulations thereunder, as amended. Allianz Global Investors Fund Management LLC (the Investment Manager) serves as the Funds Investment Manager and is an indirect, wholly-owned subsidiary of Allianz Global Investors of America L.P. (Allianz Global). Allianz Global is an indirect, wholly-owned subsidiary of Allianz SE, a publicly traded European insurance and financial services company. The Funds have an unlimited amount of \$0.00001 par value per share of common shares authorized.

Corporate Income s primary investment objective is to seek high current income with capital preservation and capital appreciation as secondary objectives by investing at least 80% of its total assets in a diversified portfolio of U.S. dollar denominated corporate debt obligations and of other income-producing securities.

Income Opportunity s primary investment objective is to seek current income as a primary focus and also capital appreciation. Under normal market conditions, Income Opportunity will seek to achieve its objective and produce total return for shareholders by investing in a global portfolio of corporate debt, government and sovereign debt, mortgage-backed and other asset-backed securities, bank loans and related instruments, convertible securities and income-producing securities of U.S. and foreign issuers, including emerging market issuers.

There is no guarantee that the Funds will meet their stated objectives.

The preparation of the financial statements in accordance with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts and disclosures in each Fund s financial statements. Actual results could differ from those estimates.

In the normal course of business, the Funds enter into contracts that contain a variety of representations that provide general indemnifications. The Funds maximum exposure under these arrangements is unknown as this would involve future claims that may be made against the Funds that have not yet occurred.

The following is a summary of significant accounting policies consistently followed by the Funds:

(a) Valuation of Investments

Portfolio securities and other financial instruments for which market quotations are readily available are stated at market value. Market value is generally determined on the basis of last reported sales prices, or if no sales are reported, on the basis of quotes obtained from a quotation reporting system, established market makers, or independent pricing services.

Portfolio securities and other financial instruments for which market quotations are not readily available, or for which a development/event occurs that may significantly impact the value of a security, are fair-valued, in good faith, pursuant to procedures established by the Board of Trustees, or persons acting at their discretion pursuant to procedures established by the Board of Trustees, including certain fixed income securities which may be valued with reference to securities whose prices are more readily available. The Funds' investments are valued daily using prices supplied by an independent pricing service or dealer quotations, or by using the last sale price on the exchange that is the primary market for such securities, or the mean between the last quoted bid and ask price. Independent pricing services use information provided by market makers or estimates of market values obtained from yield data relating to investments or securities with similar characteristics. Exchange-traded futures and options on futures are valued at the settlement price determined by the relevant exchange. Short-term securities maturing in 60 days or less are valued at amortized cost, if their original term to maturity was 60 days or less, or by amortizing their value on the 61st day prior to maturity, if the original term to maturity exceeded 60 days. Investments initially valued in currencies other than the U.S. dollar are converted to the U.S. dollar using exchange rates obtained from pricing services. As a result, the net asset value (NAV) of each Fund's shares may be affected by changes in the value of currencies in relation to the U.S. dollar. The value of securities traded in markets outside the United States or denominated in currencies other than the U.S. dollar may be affected significantly on a day that the New York Stock Exchange (NYSE) is closed.

The prices used by the Funds to value securities may differ from the value that would be realized if the securities were sold, and these differences could be material to the Funds' financial statements. Each Fund's NAV is normally determined as of the close of regular trading (normally, 4:00 p.m. Eastern time) on the NYSE on each day the NYSE is open for business.

**PIMCO Corporate Income Fund/PIMCO Income Opportunity Fund
Notes to Financial Statements**

April 30, 2011 (unaudited)

1. Organization and Significant Accounting Policies (continued)

(b) Fair Value Measurements

Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability (i.e. the exit price) in an orderly transaction between market participants. The three levels of the fair value hierarchy are described below:

- Level 1 quoted prices in active markets for identical investments that the Funds have the ability to access
- Level 2 valuations based on other significant observable inputs (including quoted prices for similar investments, interest rates, prepayment speeds, credit risk, etc.) or quotes from inactive exchanges
- Level 3 valuations based on significant unobservable inputs (including the Funds' own assumptions in determining the fair value of investments)

An investment asset's or liability's level within the fair value hierarchy is based on the lowest level input, individually or in aggregate, that is significant to fair value measurement. The objective of fair value measurement remains the same even when there is a significant decrease in the volume and level of activity for an asset or liability and regardless of the valuation techniques used.

The valuation techniques used by the Funds to measure fair value during the six months ended April 30, 2011 maximized the use of observable inputs and minimized the use of unobservable inputs. When fair-valuing securities, the Funds utilized option adjusted spread pricing techniques.

The inputs or methodology used for valuing securities is not necessarily an indication of the risk associated with investing in those securities. The following are certain inputs and techniques that the Funds generally use to evaluate how to classify each major category of assets and liabilities for Level 2 and Level 3, in accordance with Generally Accepted Accounting Principles (GAAP).

Equity Securities (Common and Preferred Stock) Equity securities traded in inactive markets and certain foreign equity securities are valued using inputs which include broker-dealer quotes, recently executed transactions adjusted for changes in the benchmark index, or evaluated price quotes received from independent pricing services that take into account the integrity of the market sector and issuer, the individual characteristics of the security, and information received from broker-dealers and other market sources pertaining to the issuer or security. To the extent that these inputs are observable, the values of equity securities are categorized as Level 2. To the extent that these inputs are unobservable, the values are categorized as Level 3.

U.S. Treasury Obligations U.S. Treasury obligations are valued by independent pricing services based on pricing models that evaluate the mean between the most recently quoted bid and ask price. The models also take into consideration data received from active market makers and broker-dealers, yield curves, and the spread over comparable U.S. Treasury issues. The spreads change daily in response to market conditions and are generally obtained from the new issue market and broker-dealer sources. To the extent that these inputs are observable, the values of

Edgar Filing: PIMCO CORPORATE INCOME FUND - Form N-CSRS

U.S. Treasury obligations are categorized as Level 2. To the extent that these inputs are unobservable, the values are categorized as Level 3.

Government Sponsored Enterprise and Mortgage-Backed Securities Government sponsored enterprise and mortgage-backed securities are valued by independent pricing services using pricing models based on inputs that include issuer type, coupon, cash flows, mortgage prepayment projection tables and Adjustable Rate Mortgage evaluations that incorporate index data, periodic and life caps, the next coupon reset date, and the convertibility of the bond. To the extent that these inputs are observable, the values of Government sponsored enterprise and mortgage-backed securities are categorized as Level 2. To the extent that these inputs are unobservable, the values are categorized as Level 3.

Municipal Bonds Municipal bonds are valued by independent pricing services based on pricing models that take into account, among other factors, information received from market makers and broker-dealers, current trades, bid-want lists, offerings, market movements, the callability of the bond, state of issuance, benchmark yield curves, and bond insurance. To the extent that these inputs are observable, the values of municipal bonds are categorized as Level 2. To the extent that these inputs are unobservable, the values are categorized as Level 3.

Sovereign Debt Obligations Sovereign debt obligations are valued by independent pricing services based on discounted cash flow models that incorporate option adjusted spreads along with benchmark curves and credit spreads. In addition, international bond markets are monitored regularly for information pertaining to the issuer and/or the specific issue. To the extent that these inputs are observable, the values of sovereign debt obligations are categorized as Level 2. To the extent that these inputs are unobservable, the values are categorized as Level 3.

PIMCO Corporate Income Fund

38 PIMCO Income Opportunity Fund Semi-Annual Report | 4.30.11

**PIMCO Corporate Income Fund/PIMCO Income Opportunity Fund
Notes to Financial Statements**

April 30, 2011 (unaudited)

1. Organization and Significant Accounting Policies (continued)

Corporate Bonds & Notes Corporate bonds and notes are generally comprised of two main categories: investment grade bonds and high yield bonds. Investment grade bonds are valued by independent pricing services using various inputs and techniques, which include broker-dealer quotations, live trading levels, recently executed transactions in securities of the issuer or comparable issuers, and option adjusted spread models that include base curve and spread curve inputs. Adjustments to individual bonds can be applied to recognize trading differences compared to other bonds issued by the same issuer. High yield bonds are valued by independent pricing services based primarily on broker-dealer quotations from relevant market makers and recently executed transactions in securities of the issuer or comparable issuers. The broker-dealer quotations received are supported by credit analysis of the issuer that takes into consideration credit quality assessments, daily trading activity, and the activity of the underlying equities, listed bonds and sector-specific trends. To the extent that these inputs are observable, the values of corporate bonds and notes are categorized as Level 2. To the extent that these inputs are unobservable, the values are categorized as Level 3.

Convertible Bonds Convertible bonds are valued by independent pricing services based on various inputs and techniques, which include broker-dealer quotations from relevant market makers and recently executed transactions in securities of the issuer or comparable issuers. The broker-dealer quotations received are supported by credit analysis of the issuer that takes into consideration credit quality assessments, daily trading activity, and the activity of the underlying equities, listed bonds and sector-specific trends. To the extent that these inputs are observable, the values of convertible bonds are categorized as Level 2. To the extent that these inputs are unobservable, the values are categorized as Level 3.

Asset-Backed Securities and Collateralized Mortgage Obligations Asset-backed securities and collateralized mortgage obligations are valued by independent pricing services using pricing models based on a security's average life volatility. The models also take into account tranche characteristics such as coupon average life, collateral types, ratings, the issuer and tranche type, underlying collateral and performance of the collateral, and discount margin for certain floating rate issues. To the extent that these inputs are observable, the values of asset-backed securities and collateralized mortgage obligations are categorized as Level 2. To the extent that these inputs are unobservable, the values are categorized as Level 3.

Forward Foreign Currency Contracts Forward foreign currency contracts are valued by independent pricing services using various inputs and techniques, which include broker-dealer quotations, actual trading information and foreign currency exchange rates gathered from leading market makers and foreign currency exchange trading centers throughout the world. To the extent that these inputs are observable, the values of forward foreign currency contracts are categorized as Level 2. To the extent that these inputs are unobservable, the values are categorized as Level 3.

Interest Rate Swaps Interest rate swaps are valued by independent pricing services using pricing models that are based on real-time intraday snapshots of relevant interest rate curves that are built using the most actively traded securities for a given maturity. The pricing models also incorporate cash and money market rates. In addition, market data pertaining to interest rate swaps is monitored regularly to ensure that interest rates are properly depicting the current market rate. To the extent that these inputs are observable, the values of interest rate swaps are categorized as Level 2. To the extent that these inputs are unobservable, the values are categorized as Level 3.

Edgar Filing: PIMCO CORPORATE INCOME FUND - Form N-CSRS

Credit Default Swaps Credit default swaps are valued by independent pricing services using pricing models that take into account, among other factors, information received from market makers and broker-dealers, default probabilities from index specific credit spread curves, recovery rates, and cash flows. To the extent that these inputs are observable, the values of credit default swaps are categorized as Level 2. To the extent that these inputs are unobservable, the values are categorized as Level 3.

Senior Loans Senior Loans are valued by independent pricing services based on the average of quoted prices received from multiple dealers or valued relative to other benchmark securities when broker-dealer quotes are unavailable. To the extent that these inputs are observable, the values of Senior Loans are categorized as Level 2. To the extent that these inputs are unobservable, the values are categorized as Level 3.

The Funds policy is to recognize transfers between levels at the end of the reporting period.

* Other financial instruments are derivatives not reflected in the Schedules of Investments, such as futures contracts, swap agreements and forward foreign currency contracts, which are valued at the unrealized appreciation (depreciation) of the instrument.

** Transferred out of Level 3 into Level 2 because sufficient observable inputs were available.

The net change in unrealized appreciation/depreciation of Level 3 investments, which Corporate Income held at April 30, 2011 was \$441,275. The net change in unrealized appreciation/depreciation of Level 3 investments and other financial instruments, which Income Opportunity held at April 30, 2011 was \$(612,466) and \$(2,243), respectively. Net realized gain (loss) and net change in unrealized appreciation/depreciation are reflected on the Statements of Operations.

(c) Investment Transactions and Investment Income

Investment transactions are accounted for on the trade date. Securities purchased and sold on a when-issued or delayed-delivery basis may be settled a month or more after the trade date. Realized gains and losses on investments are determined on an identified cost basis. Interest income adjusted for the accretion of discount and amortization of premium is recorded on an accrual basis. Discounts or premiums on debt securities purchased are accreted or amortized, respectively, to interest income over the lives of the respective securities. Dividend income is recorded on the ex-dividend date. Facility fees and other fees (such as origination fees) received on settlement date are amortized as income over the expected term of the senior loan. Facility fees and other fees received after settlement date relating to senior loans, consent fees relating to

Edgar Filing: PIMCO CORPORATE INCOME FUND - Form N-CSRS

corporate actions and commitment fees received relating to unfunded purchase commitments are recorded as other fee income upon receipt. Paydown gains and losses are netted and recorded as interest income on the Statements of Operations.

(d) Federal Income Taxes

The Funds intend to distribute all of their taxable income and to comply with the other requirements of Subchapter M of the U.S. Internal Revenue Code of 1986, as amended, applicable to regulated investment companies. Accordingly, no provision for U.S. federal income taxes is required.

Accounting for uncertainty in income taxes establishes for all entities, including pass-through entities such as the Funds, a minimum threshold for financial statement recognition of the benefit of positions taken in filing tax returns (including whether an entity is taxable in a particular jurisdiction), and requires certain expanded tax disclosures. The Funds' management has

PIMCO Corporate Income Fund

42 PIMCO Income Opportunity Fund Semi-Annual Report | 4.30.11

PIMCO Corporate Income Fund/PIMCO Income Opportunity Fund

Notes to Financial Statements

April 30, 2011 (unaudited)

1. Organization and Significant Accounting Policies (continued)

determined that its evaluation has resulted in no material impact to the Funds' financial statements at April 30, 2011. The Funds' federal tax returns for the prior three years remain subject to examination by the Internal Revenue Service.

(e) Dividends and Distributions - Common Shares

Corporate Income declares dividends from net investment income to common shareholders monthly. Distributions of net realized capital gains, if any, are paid at least annually. Income Opportunity declares dividends from net investment income and net short-term capital gains, if any, from the sale of portfolio securities and other sources to common shareholders monthly. Distributions of net long-term realized capital gains, if any, are paid at least annually. The Funds record dividends and distributions to their respective shareholders on the ex-dividend date. The amount of dividends and distributions from net investment income and net realized capital gains are determined in accordance with federal income tax regulations, which may differ from GAAP. These book-tax differences are considered either temporary or permanent in nature. To the extent these differences are permanent in nature, such amounts are reclassified within the capital accounts based on their federal income tax treatment. Temporary differences do not require reclassification. To the extent dividends and/or distributions exceed current and accumulated earnings and profits for federal income tax purposes, they are reported as dividends and/or distributions to shareholders from return of capital.

(f) Foreign Currency Translation

The Funds' accounting records are maintained in U.S. dollars as follows: (1) the foreign currency market value of investments and other assets and liabilities denominated in foreign currencies are translated at the prevailing exchange rate at the end of the period; and (2) purchases and sales, income and expenses are translated at the prevailing exchange rate on the respective dates of such transactions. The resulting net foreign currency gain (loss) is included in the Funds' Statements of Operations.

The Funds do not generally isolate that portion of the results of operations arising as a result of changes in the foreign currency exchange rates from the fluctuations arising from changes in the market prices of securities. Accordingly, such foreign currency gain (loss) is included in net realized and unrealized gain (loss) on investments. However, the Funds do isolate the effect of fluctuations in foreign currency exchange rates when determining the gain (loss) upon the sale or maturity of foreign currency denominated debt obligations pursuant to U.S. federal income tax regulations; such amount is categorized as foreign currency gain (loss) for both financial reporting and income tax reporting purposes.

(g) Senior Loans

The Funds purchase assignments of, and participations in, Senior Loans originated, negotiated and structured by a U.S. or foreign commercial bank, insurance company, finance company or other financial institution (the Agent) for a lending syndicate of financial institutions (the Lender). When purchasing an assignment, the Funds succeed to all the rights and obligations under the loan agreement with the same rights and obligations as the assigning Lender. Assignments may, however, be arranged through private negotiations between potential assignees and potential assignors, and the rights and obligations acquired by the purchaser of an assignment may differ from, and be more limited than, those

held by the assigning Lender.

(h) Repurchase Agreements

The Funds enter into transactions with their custodian bank or securities brokerage firms whereby they purchase securities under agreements to resell such securities at an agreed upon price and date (repurchase agreements). The Funds, through their custodian, take possession of securities collateralizing the repurchase agreement. Such agreements are carried at the contract amount in the financial statements, which is considered to represent fair-value. Collateral pledged (the securities received), which consists primarily of U.S. government obligations and asset-backed securities, is held by the custodian bank for the benefit of the Funds until maturity of the repurchase agreement. Provisions of the repurchase agreements and the procedures adopted by the Funds require that the market value of the collateral, including accrued interest thereon, be sufficient in the event of default by the counterparty. If the counterparty defaults and the value of the collateral declines or if the counterparty enters an insolvency proceeding, realization of the collateral by the Funds may be delayed or limited.

(i) Reverse Repurchase Agreements

In a reverse repurchase agreement, the Funds sell securities to a bank or broker-dealer and agree to repurchase the securities at a mutually agreed upon date and price. Generally, the effect of such a transaction is that the Funds can recover and reinvest all or most of the cash invested in portfolio securities involved during the term of the reverse repurchase agreement and still be entitled to the returns associated with those portfolio securities. Such transactions

PIMCO Corporate Income Fund/PIMCO Income Opportunity Fund

Notes to Financial Statements

April 30, 2011 (unaudited)

1. Organization and Significant Accounting Policies (continued)

are advantageous if the interest cost to the Funds of the reverse repurchase transaction is less than the returns it obtains on investments purchased with the cash. To the extent the Funds do not cover their positions in reverse repurchase agreements (by segregating liquid assets at least equal in amount to the forward purchase commitment), the Funds' uncovered obligations under the agreements will be subject to the Funds' limitations on borrowings. Reverse repurchase agreements involve leverage risk and also the risk that the market value of the securities that the Funds are obligated to repurchase under the agreements may decline below the repurchase price. In the event the buyer of securities under a reverse repurchase agreement files for bankruptcy or becomes insolvent, the Funds' use of the proceeds of the agreement may be restricted pending determination by the other party, or their trustee or receiver, whether to enforce the Funds' obligation to repurchase the securities.

(j) Mortgage-Related and Other Asset-Backed Securities

Investments in mortgage-related or other asset-backed securities include mortgage pass-through securities, collateralized mortgage obligations (CMOs), commercial mortgage-backed securities, mortgage dollar rolls, CMO residuals, stripped mortgage-backed securities (SMBSs) and other securities that directly or indirectly represent a participation in, or are secured by and payable from, mortgage loans on real property. The value of some mortgage-related or asset-backed securities may be particularly sensitive to changes in prevailing interest rates. Early repayment of principal on some mortgage-related securities may expose the Funds to a lower rate of return upon reinvestment of principal. The value of these securities may fluctuate in response to the market's perception of the creditworthiness of the issuers. The decline in liquidity and prices of these types of securities may make it more difficult to determine fair market value. Additionally, although mortgages and mortgage-related securities are generally supported by some form of government or private guarantee and/or insurance, there is no assurance that private guarantors or insurers will meet their obligations.

(k) U.S. Government Agencies or Government-Sponsored Enterprises

Securities issued by U.S. Government agencies or government-sponsored enterprises may not be guaranteed by the U.S. Treasury. The Government National Mortgage Association (GNMA or Ginnie Mae), a wholly-owned U.S. Government corporation, is authorized to guarantee, with the full faith and credit of the U.S. Government, the timely payment of principal and interest on securities issued by institutions approved by GNMA and backed by pools of mortgages insured by the Federal Housing Administration or guaranteed by the Department of Veterans Affairs. Government-related guarantors not backed by the full faith and credit of the U.S. Government include the Federal National Mortgage Association (FNMA or Fannie Mae) and the Federal Home Loan Mortgage Corporation (FHLMC or Freddie Mac). Pass-through securities issued by FNMA are guaranteed as to timely payment of principal and interest by FNMA, but are not backed by the full faith and credit of the U.S. Government. FHLMC guarantees the timely payment of interest and ultimate collection of principal, but its participation certificates are not backed by the full faith and credit of the U.S. Government.

(l) Short Sales

Short sale transactions involve the Funds selling securities they do not own in anticipation of a decline in the market price of the securities. The Funds are obligated to deliver securities at the market price at the time the short position is closed. Possible losses from short sales may be unlimited, whereas losses from purchases cannot exceed the total amount invested.

(m) Restricted Securities

The Funds are permitted to invest in securities that are subject to legal or contractual restrictions on resale. These securities generally may be resold in transactions exempt from registration or to the public if the securities are registered. Disposal of these securities may involve time consuming negotiations and expenses, and prompt sale at an acceptable price may be difficult.

(n) Interest Expense

Interest expense primarily relates to the Funds' participation in reverse repurchase agreement transactions. Interest expense is recorded as it is incurred.

(o) Custody Credits on Cash Balances

The Funds benefit from an expense offset arrangement with their custodian bank, whereby uninvested cash balances earn credits that reduce monthly custodian and accounting agent expenses. Had these cash balances been invested in income-producing securities, they would have generated income for the Funds. Cash overdraft charges, if any, are included in custodian and accounting agent fees.

PIMCO Corporate Income Fund

44 PIMCO Income Opportunity Fund Semi-Annual Report | 4.30.11

**PIMCO Corporate Income Fund/PIMCO Income Opportunity Fund
Notes to Financial Statements**

April 30, 2011 (unaudited)

2. Principal Risks

In the normal course of business, the Funds trade financial instruments and enter into financial transactions where risk of potential loss exists due to, among other things, changes in the market (market risk) or failure of the other party to a transaction to perform (counterparty risk). The Funds are also exposed to other risks such as, but not limited to, interest rate, foreign currency and credit risks.

Interest rate risk is the risk that fixed income securities will decline in value because of changes in interest rates. As nominal interest rates rise, the value of certain fixed income securities held by the Funds are likely to decrease. A nominal interest rate can be described as the sum of a real interest rate and an expected inflation rate. Fixed income securities with longer durations tend to be more sensitive to changes in interest rates, usually making them more volatile than securities with shorter durations. Duration is used primarily as a measure of the sensitivity of a fixed income security's market price to interest rate (i.e. yield) movements.

Variable and floating rate securities generally are less sensitive to interest rate changes but may decline in value if their interest rates do not rise as much, or as quickly, as interest rates in general. Conversely, floating rate securities will not generally increase in value if interest rates decline. Inverse floating rate securities may decrease in value if interest rates increase. Inverse floating rate securities may also exhibit greater price volatility than a fixed rate obligation with similar credit quality. When the Funds hold variable or floating rate securities, a decrease (or, in the case of inverse floating rate securities, an increase) in market interest rates will adversely affect the income received from such securities and the NAV of the Funds' shares.

Mortgage-related and other asset-backed securities often involve risks that are different from or more acute than risks associated with other types of debt instruments. Generally, rising interest rates tend to extend the duration of fixed rate mortgage-related securities, making them more sensitive to changes in interest rates. As a result, in a period of rising interest rates, if the Funds hold mortgage-related securities, they may exhibit additional volatility. This is known as extension risk. In addition, adjustable and fixed rate mortgage-related securities are subject to prepayment risk. When interest rates decline, borrowers may pay off their mortgages sooner than expected. This can reduce the returns of the Funds because the Funds may have to reinvest that money at the lower prevailing interest rates. The Funds' investments in other asset-backed securities are subject to risks similar to those associated with mortgage-related securities, as well as additional risks associated with the nature of the assets and the servicing of those assets.

The Funds are exposed to credit risk, which is the risk of losing money if the issuer or guarantor of a fixed income security is unable or unwilling, or is perceived (whether by market participants, rating agencies, pricing services or otherwise) as unable or unwilling, to make timely principal and/or interest payments, or to otherwise honor its obligations. Securities are subject to varying degrees of credit risk, which are often reflected in credit ratings.

To the extent the Funds directly invest in foreign currencies or in securities that trade in, and receive revenues in, foreign currencies, or in derivatives that provide exposure to foreign currencies, it will be subject to the risk that those currencies will decline in value relative to the U.S. dollar, or, in the case of hedging positions, that the U.S. dollar will decline in value relative to the currency being hedged. Currency rates in

Edgar Filing: PIMCO CORPORATE INCOME FUND - Form N-CSRS

foreign countries may fluctuate significantly over short periods of time for a number of reasons, including economic growth, inflation, changes in interest rates, intervention (or the failure to intervene) by U.S. or foreign governments, central banks or supranational entities such as the International Monetary Fund, or the imposition of currency controls or other political developments in the United States or abroad. As a result, the Funds' investments in foreign currency-denominated securities may reduce the returns of the Funds.

The Funds are subjected to elements of risk not typically associated with investments in the U.S., due to concentrated investments in foreign issuers located in a specific country or region. Such concentrations will subject the Funds to additional risks resulting from future political or economic conditions in such country or region and the possible imposition of adverse governmental laws of currency exchange restrictions affecting such country or region, which could cause the securities and their markets to be less liquid and prices more volatile than those of comparable U.S. companies.

The market values of equity securities, such as common and preferred stock, or equity-related investments, such as futures and options, may decline due to general market conditions which are not specifically related to a particular company, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or adverse investor sentiment. They may also decline due to factors that affect a

**PIMCO Corporate Income Fund/PIMCO Income Opportunity Fund
Notes to Financial Statements**

April 30, 2011 (unaudited)

2. Principal Risks (continued)

particular industry or industries, such as labor shortages or increased production costs and competitive conditions within an industry. Equity securities and equity related investments generally have greater market price volatility than fixed income securities.

The Funds are exposed to counterparty risk, or the risk that an institution or other entity with which the Funds have unsettled or open transactions will default. The potential loss to the Funds could exceed the value of the financial assets recorded in the Funds' financial statements. Financial assets, which potentially expose the Funds to counterparty risk, consist principally of cash due from counterparties and investments. The Funds' Sub-Adviser, Pacific Investment Management Company LLC (the Sub-Adviser), an affiliate of the Investment Manager, seeks to minimize the Funds' counterparty risk by performing reviews of each counterparty and by minimizing concentration of counterparty risk by undertaking transactions with multiple customers and counterparties on recognized and reputable exchanges. Delivery of securities sold is only made once the Funds have received payment. Payment is made on a purchase once the securities have been delivered by the counterparty. The trade will fail if either party fails to meet its obligation.

Leverage will cause the value of the Funds' shares to be more volatile than if the Funds did not use leverage. This is because leverage tends to exaggerate the effect of any increase or decrease in the value of the Funds' portfolio securities. The Funds may engage in transactions (such as reverse repurchase agreements) or purchase instruments that give rise to forms of leverage. In addition, to the extent the Funds employ leverage, interest costs may not be recovered by any appreciation of the securities purchased with the leverage proceeds and could exceed the Funds' investment returns, resulting in greater losses.

The Funds are party to International Swaps and Derivatives Association, Inc. Master Agreements (ISDA Master Agreements) with select counterparties that govern transactions, over-the-counter derivatives and foreign exchange contracts entered into by the Funds and those counterparties. The ISDA Master Agreements contain provisions for general obligations, representations, agreements, collateral and events of default or termination. Events of termination include conditions that may entitle counterparties to elect to terminate early and cause settlement of all outstanding transactions under the applicable ISDA Master Agreement. Any election to terminate early could be material to the financial statements of the Funds.

The considerations and factors surrounding the settlement of certain purchases and sales made on a delayed-delivery basis are governed by Master Securities Forward Transaction Agreements (Master Forward Agreements) between the Funds and select counterparties. The Master Forward Agreements maintain provisions for, among other things, initiation and confirmation, payment and transfer, events of default, termination, and maintenance of collateral.

The Funds are also party to Master Repurchase Agreements (Master Repo Agreements) with select counterparties. The Master Repo Agreements maintain provisions for initiation, income payments, events of default, and maintenance of collateral.

Edgar Filing: PIMCO CORPORATE INCOME FUND - Form N-CSRS

The counterparty risk associated with certain contracts may be reduced by master netting arrangements to the extent that if an event of default occurs, all amounts with the counterparty are terminated and settled on a net basis. The Funds' overall exposure to counterparty risk with respect to transactions subject to master netting arrangements can change substantially within a short period, as it is affected by each transaction subject to the arrangement.

Corporate Income had security transactions outstanding with Lehman Brothers entities as the counterparty at the time the relevant Lehman Brothers entity filed for protection or was placed in administration. The security transactions, associated with Lehman Brothers Inc., (SLH) as counterparty were written down to their estimated recoverable values. Anticipated losses for securities transactions associated with SLH have been incorporated as net realized gain (loss) on the Fund's Statement of Operations. The remaining balances due from SLH are included in receivable from broker on the Fund's Statement of Assets and Liabilities. The estimated recoverable value of receivables is determined by independent broker quotes.

3. Financial Derivative Instruments

Disclosure about derivatives and hedging activities requires qualitative disclosure regarding objectives and strategies for using derivatives, quantitative disclosure about fair value amounts of gains and losses on derivatives, and disclosure about credit-risk-related contingent features in derivative agreements. The disclosure requirements distinguish between derivatives which are accounted for as hedges and those that do not qualify for such accounting. Although

PIMCO Corporate Income Fund

46 PIMCO Income Opportunity Fund Semi-Annual Report | 4.30.11

**PIMCO Corporate Income Fund/PIMCO Income Opportunity Fund
Notes to Financial Statements**

April 30, 2011 (unaudited)

3. Financial Derivative Instruments (continued)

the Funds sometimes use derivatives for hedging purposes, the Funds reflect derivatives at fair value and recognize changes in fair value through the Funds' Statements of Operations, and such derivatives do not qualify for hedge accounting treatment.

(a) Futures Contracts

The Funds use futures contracts to manage their exposure to the securities markets or the movements in interest rates and currency values. A futures contract is an agreement between two parties to buy and sell a financial instrument at a set price on a future date. Upon entering into such a contract, the Funds are required to pledge to the broker an amount of cash or securities equal to the minimum initial margin requirements of the exchange. Pursuant to the contracts, the Funds agree to receive from or pay to the broker an amount of cash or securities equal to the daily fluctuation in the value of the contracts. Such receipts or payments are known as variation margin and are recorded by the Funds as unrealized appreciation or depreciation. When the contracts are closed, the Funds record a realized gain or loss equal to the difference between the value of the contracts at the time they were opened and the value at the time they were closed. Any unrealized appreciation or depreciation recorded is simultaneously reversed. The use of futures transactions involves various risks, including the risk of an imperfect correlation in the movements in the price of futures contracts, interest rates and underlying hedging assets, and possible inability or unwillingness of counterparties to meet the terms of their contracts. There were no open futures transactions for Income Opportunity at April 30, 2011.

(b) Swap Agreements

Swap agreements are privately negotiated agreements between the Funds and a counterparty to exchange or swap investment cash flows, assets, foreign currencies or market-linked returns at specified, future intervals. The Funds enter into credit default, cross-currency, interest rate, total return, variance and other forms of swap agreements in order to manage their exposure to credit, currency and interest rate risk. In connection with these agreements, securities may be identified as collateral in accordance with the terms of the respective swap agreements to provide assets of value and recourse in the event of default or bankruptcy/insolvency.

Payments received or made at the beginning of the measurement period are reflected as such on the Funds' Statements of Assets and Liabilities and represent payments made or received upon entering into the swap agreement to compensate for differences between the stated terms of the swap agreement and prevailing market conditions (credit spreads, currency exchange rates, interest rates, and other relevant factors). These upfront payments are recorded as realized gains or losses on the Funds' Statements of Operations upon termination or maturity of the swap. A liquidation payment received or made at the termination of the swap is recorded as realized gain or loss on the Funds' Statements of Operations. Net periodic payments received or paid by the Funds are included as part of realized gains or losses on the Funds' Statements of Operations.

Entering into these agreements involves, to varying degrees, elements of credit, legal, market and documentation risk in excess of the amounts recognized on the Funds' Statements of Assets and Liabilities. Such risks include the possibility that there will be no liquid market for these agreements, that the counterparties to the agreements may default on their obligation to perform or disagree as to the meaning of contractual terms in the agreements and that there may be unfavorable changes in interest rates.

Credit Default Swap Agreements Credit default swap agreements involve one party (referred to as the buyer of protection) making a stream of payments to another party (the seller of protection) in exchange for the right to receive a specified return in the event of a default or other credit event for the referenced entity, obligation or index. As sellers of protection on credit default swap agreements, the Funds will generally receive from the buyer of protection a fixed rate of income throughout the term of the swap provided that there is no credit event. As sellers, the Funds would effectively add leverage to their investment portfolios because, in addition to their total net assets, the Funds would be subject to investment exposure on the notional amount of the swap.

If the Funds are sellers of protection and a credit event occurs, as defined under the terms of that particular swap agreement, a Fund will either (i) pay to the buyer of protection an amount equal to the notional amount of the swap and take delivery of the referenced obligation, other deliverable obligations or underlying securities comprising the referenced index or (ii) pay a net settlement amount in the form of cash or securities equal to the notional amount of the swap less the recovery value of the referenced obligation or underlying securities comprising the referenced index. If the Funds are buyers of protection and a credit event occurs, as defined under the terms of that particular swap agreement, a Fund will either (i) receive from the seller of protection an amount equal to the notional amount of the

**PIMCO Corporate Income Fund/PIMCO Income Opportunity Fund
Notes to Financial Statements**

April 30, 2011 (unaudited)

3. Financial Derivative Instruments (continued)

swap and deliver the referenced obligation, other deliverable obligations or underlying securities comprising the referenced index or (ii) receive a net settlement amount in the form of cash or securities equal to the notional amount of the swap less the recovery value of the referenced obligation or underlying securities comprising the referenced index. Recovery values are assumed by market makers considering either industry standard recovery rates or entity specific factors and considerations until a credit event occurs. If a credit event has occurred, the recovery value is determined by a facilitated auction whereby a minimum number of allowable broker bids, together with a specified valuation method, are used to calculate the settlement value.

Credit default swap agreements on corporate issues or sovereign issues of an emerging market country involve one party making a stream of payments to another party in exchange for the right to receive a specified return in the event of a default or other credit event. If a credit event occurs and cash settlement is not elected, a variety of other deliverable obligations may be delivered in lieu of the specific referenced obligation. The ability to deliver other obligations may result in a cheapest-to-deliver option (the buyer of protection's right to choose the deliverable obligation with the lowest value following a credit event). The Funds use credit default swaps on corporate issues or sovereign issues of an emerging country to provide a measure of protection against defaults of the issuers (i.e., to reduce risk where the Funds own or have exposure to the referenced obligation) or to take an active long or short position with respect to the likelihood of a particular issuer's default.

Credit default swap agreements on asset-backed securities involve one party making a stream of payments to another party in exchange for the right to receive a specified return in the event of a default or other credit events. Unlike credit default swaps on corporate issues or sovereign issues of an emerging country, deliverable obligations in most instances would be limited to the specific referenced obligation as performance for asset-backed securities can vary across deals. Prepayments, principal paydowns, and other writedown or loss events on the underlying mortgage loans will reduce the outstanding principal balance of the referenced obligation. These reductions may be temporary or permanent as defined under the terms of the swap agreement and the notional amount for the swap agreement will be adjusted by corresponding amounts. The Funds use credit default swaps on asset-backed securities to provide a measure of protection against defaults of the referenced obligation or to take an active long or short position with respect to the likelihood of a particular referenced obligation's default.

Credit default swap agreements on credit indices involve one party making a stream of payments to another party in exchange for the right to receive a specified return in the event of a write-down, principal shortfall, interest shortfall or default of all or part of the referenced entities comprising the credit index. A credit index is a basket of credit instruments or exposures designed to be representative of some part of the credit market as a whole. These indices are made up of reference credits that are judged by a poll of dealers to be the most liquid entities in the credit default swap market based on the sector of the index. Components of the indices may include, but are not limited to, investment grade securities, high yield securities, asset backed securities, emerging markets, and/or various credit ratings within each sector. Credit indices are traded using credit default swaps with standardized terms including a fixed spread and standard maturity dates. An index credit default swap references all the names in the index, and if there is a default, the credit event is settled based on that name's weight in the index, or in the case of a tranching index credit default swap, the credit event is settled based on the name's weight in the index that falls within the tranche for which the Funds bear exposure. The composition of the indices changes periodically, usually every six months, and for most indices, each name has an equal weight in the index. The Funds use credit default swaps on credit indices to hedge a portfolio of credit default swaps or bonds with a credit default swap on indices which is less expensive than it would be to buy many credit default swaps to achieve a similar effect. Credit-default swaps on indices are benchmarks for protecting investors owning bonds against default, and traders use them to speculate on changes in credit quality.

Edgar Filing: PIMCO CORPORATE INCOME FUND - Form N-CSRS

Implied credit spreads, represented in absolute terms, utilized in determining the market value of credit default swap agreements on corporate issues or sovereign issues of an emerging market country as of period end are disclosed later in the Notes to Financial Statements (see 5(b)) and serve as an indicator of the current status of the payment/performance risk and represent the likelihood or risk of default for the credit derivative. The implied credit spread of a particular referenced entity reflects the cost of buying/selling protection and may include upfront payments required to be made to enter into the agreement. For credit default swap agreements on asset-backed securities and credit indices, the quoted market prices and resulting values serve as the indicator of the current status of the payment/performance risk. Wider credit spreads and increasing market values, in absolute terms when compared to

3. Financial Derivative Instruments (continued)

the notional amount of the swap, represent a deterioration of the referenced entity's credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement.

The maximum potential amount of future payments (undiscounted) that the Funds as sellers of protection could be required to make under a credit default swap agreement would be an amount equal to the notional amount of the agreement. Notional amounts of all credit default swap agreements outstanding as of April 30, 2011 for which the Funds are sellers of protection are disclosed later in the Notes to Financial Statements (see 5(b)). These potential amounts would be partially offset by any recovery values of the respective referenced obligations, upfront payments received upon entering into the agreement, or net amounts received from the settlement of buy protection credit default swap agreements entered into by the Funds for the same referenced entity or entities.

Interest Rate Swap Agreements Interest rate swap agreements involve the exchange by the Funds with a counterparty of their respective commitments to pay or receive interest, e.g., an exchange of floating rate payments for fixed rate payments, with respect to the notional amount of principal. Certain forms of interest rate swap agreements may include: (i) interest rate caps, under which, in return for a premium, one party agrees to make payments to the other to the extent that interest rates exceed a specified rate, or cap, (ii) interest rate floors, under which, in return for a premium, one party agrees to make payments to the other to the extent that interest rates fall below a specified rate, or floor, (iii) interest rate collars, under which a party sells a cap and purchases a floor or vice versa in an attempt to protect itself against interest rate movements exceeding given minimum or maximum levels, (iv) callable interest rate swaps, under which the counterparty may terminate the swap transaction in whole at zero cost by a predetermined date and time prior to the maturity date, (v) spreadlocks, which allow the interest rate swap users to lock in the forward differential (or spread) between the interest rate swap rate and a specified benchmark, or (vi) basis swaps, under which two parties can exchange variable interest rates based on different money markets.

(c) Forward Foreign Currency Contracts

A forward foreign currency contract is an agreement between two parties to buy and sell a currency at a set exchange rate on a future date. The Funds enter into forward foreign currency contracts for the purpose of hedging against foreign currency risk arising from the investment or anticipated investment in securities denominated in foreign currencies. The Funds also enter into these contracts for purposes of increasing exposure to a foreign currency or shifting exposure to foreign currency fluctuations from one country to another. The market value of a forward foreign currency contract fluctuates with changes in foreign currency exchange rates. All commitments are marked to market daily at the applicable exchange rates and any resulting unrealized appreciation or depreciation is recorded. Realized gains or losses are recorded at the time the forward contract matures or by delivery of the currency. Risks may arise upon entering these contracts from the potential inability of counterparties to meet the terms of their contracts and from unanticipated movements in the value of a foreign currency relative to the U.S. dollar. In addition, these contracts may involve market price risk in excess of the unrealized appreciation (depreciation) reflected in the Funds Statements of Assets and Liabilities.

The following is a summary of the fair valuation of the Funds' derivatives categorized by risk exposure.

Edgar Filing: PIMCO CORPORATE INCOME FUND - Form N-CSRS

The effect of derivatives on the Statements of Assets and Liabilities at April 30, 2011:

Corporate Income:

Location	Interest Rate Contracts	Credit Contracts	Foreign Exchange Contracts	Total
Asset derivatives:				
Unrealized appreciation on swaps		\$5,178,035		\$5,178,035
Unrealized appreciation of forward foreign currency contracts			\$243,165	243,165
Total asset derivatives		\$5,178,035	\$243,165	\$5,421,200
Liability derivatives:				
Unrealized depreciation on swaps	\$(6,910,314)			\$(6,910,314)
Payable for variation margin on futures contracts*	(9,375)			(9,375)
Unrealized depreciation of forward foreign currency contracts			\$(2,230,007)	(2,230,007)
Total liability derivatives	\$(6,919,689)		\$(2,230,007)	\$(9,149,696)

4. Investment Manager/Sub-Adviser

Each Fund has an Investment Management Agreement (each an Agreement) with the Investment Manager. Subject to the supervision of the Funds' Board of Trustees, the Investment Manager is responsible for managing, either directly or through others selected by it, each Fund's investment activities, business affairs and administrative matters. Pursuant to each Agreement, the Investment Manager receives an annual fee, payable monthly, at an annual rate of 0.75% of Corporate Income's average daily net assets, inclusive of net assets attributable to any Preferred

Edgar Filing: PIMCO CORPORATE INCOME FUND - Form N-CSRS

Shares that may be outstanding, and 1.00% of Income Opportunity's average daily total managed assets. For Income Opportunity, total managed assets refers to the total assets (including any assets attributable to any reverse repurchase agreements and borrowings that may be outstanding) minus accrued liabilities (other than liabilities representing reverse repurchase agreements and borrowings).

The Investment Manager has retained the Sub-Adviser to manage each Fund's investments. Subject to the supervision of the Investment Manager, the Sub-Adviser is responsible for making all of the Funds' investment decisions. The Investment Manager, and not the Funds, pays a portion of the fees it receives as Investment Manager to the Sub-Adviser in return for its services.

(1) If the Funds are sellers of protection and a credit event occurs, as defined under the terms of that particular swap agreement, the Funds will either (i) pay to the buyer of protection an amount equal to the notional amount of the swap and take delivery of the referenced obligation or underlying securities comprising the referenced index or (ii) pay a net settlement amount in the form of cash or securities equal to the notional amount of the swap less the recovery value of the referenced obligation or underlying securities comprising the referenced index.

(2) Implied credit spreads, represented in absolute terms, utilized in determining the market value of credit default swap agreements as of year end serve as an indicator of the current status of the payment/performance risk and represent the likelihood or risk of default for the credit derivative. The implied credit spread of a particular referenced entity reflects the cost of buying/selling protection and may include upfront payments required to be made to enter into the agreement. Wider credit spreads represent a deterioration of the referenced entity's credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement.

(3) This represents the maximum potential amount the Funds could be required to make available as sellers of credit protection or receive as buyers of credit protection if a credit event occurs as defined under the terms of that particular swap agreement.

Edgar Filing: PIMCO CORPORATE INCOME FUND - Form N-CSRS

(4) *The quoted market prices and resulting values for credit default swap agreements serve as an indicator of the status at April 30, 2011 of the payment/performance risk and represent the likelihood of an expected liability (or profit) for the credit derivative should the notional amount of the swap agreement been closed/sold as of the period end. Increasing market values, in absolute terms when compared to the notional amount of the swap, represent a deterioration of the referenced entity's credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement.*

					\$332,894,784

The weighted average daily balance of reverse repurchase agreements outstanding during the six months ended April 30, 2011 for Corporate Income and Income Opportunity was \$157,490,178 and \$320,382,087, respectively, at a weighted average interest rate of 0.49% and 0.69%, respectively. The total market value of underlying collateral (refer to the Schedules of Investments for positions segregated for the benefit of the counterparty as collateral for reverse repurchase agreements) for open reverse repurchase agreements at April 30, 2011 for Corporate Income and Income Opportunity was \$150,627,313 and \$369,652,934, respectively.

At April 30, 2011, Corporate Income held \$680,000 in principal value of U.S. Government Agency Securities and \$60,000 in cash as collateral for open reverse repurchase agreements. At April 30, 2011, Income Opportunity held \$1,010,000 in principal value of U.S. Treasury Obligations and \$510,000 in cash as collateral for open reverse repurchase agreements. Cash collateral held may be invested in accordance with the Funds

6. Income Tax Information

At April 30, 2011, the aggregate cost basis and net unrealized appreciation of investments for federal income tax purposes were as follows:

	Federal Tax Cost Basis	Unrealized Appreciation	Unrealized Depreciation	Net Unrealized Appreciation
Corporate Income	\$770,368,020	\$136,813,826	\$14,494,024	\$122,319,802
Income Opportunity	631,668,083	92,364,104	5,632,838	86,731,266

The difference between book and tax cost basis is attributable to wash sales.

7. Auction-Rate Preferred Shares Corporate Income

Corporate Income has 1,352 shares of Preferred Shares Series M, 1,352 shares of Preferred Shares Series T, 1,352 shares of Preferred Shares Series W, 1,352 shares of Preferred Shares Series TH and 1,352 shares of Preferred Shares Series F outstanding, each with a liquidation preference of \$25,000 per share plus any accumulated, unpaid dividends.

Dividends are accumulated daily at an annual rate (typically re-set every seven days) through auction procedures (or default procedures in the event of auction failure). Distributions of net realized capital gains, if any, are paid annually.

For the six months ended April 30, 2011, the annualized dividend rates ranged from:

Corporate Income:

	High	Low	At April 30, 2011
Series M	0.347%	0.090%	0.120%
Series T	0.377%	0.135%	0.165%
Series W	0.330%	0.105%	0.105%

Edgar Filing: PIMCO CORPORATE INCOME FUND - Form N-CSRS

Series TH	0.330%	0.105%	0.105%
Series F	0.330%	0.105%	0.120%

The Fund is subject to certain limitations and restrictions while Preferred Shares are outstanding. Failure to comply with these limitations and restrictions could preclude the Fund from declaring or paying any dividends or distributions to common shareholders or repurchasing common shares and/or could trigger the mandatory redemption of Preferred Shares at their liquidation preference plus any accumulated, unpaid dividends.

Preferred shareholders, who are entitled to one vote per share, generally vote together with the common shareholders but vote separately as a class to elect two Trustees and on any matters affecting the rights of the Preferred Shares.

Since mid-February 2008, holders of auction-rate preferred shares (ARPS) issued by the Fund have been directly impacted by an unprecedented lack of liquidity, which has similarly affected ARPS holders in many of the nation's closed-end funds. Since then, regularly scheduled auctions for ARPS issued by the Fund have consistently failed because of insufficient demand (bids to buy shares) to meet the supply (shares offered for sale) at each auction. In a failed auction, ARPS holders cannot sell all, and may not be able to sell any, of their shares tendered for sale. While repeated auction failures have affected the liquidity for ARPS, they do not constitute a default or automatically alter the credit quality of the ARPS, and ARPS holders have continued to receive dividends at the defined maximum rate, the 7-day AA Composite Commercial Paper Rate multiplied by a minimum of 150%, depending on the credit rating of the ARPS (which is a function of short-term interest rates and typically higher than the rate that would have otherwise been set through a successful auction). If the Fund's ARPS auctions continue to fail and the maximum rate payable on the ARPS rises as a result of changes in short-term interest rates, returns for the Fund's common shareholders could be adversely affected.

See Note 8 Legal Proceedings, for a discussion of shareholder demand letters received by certain closed-end funds managed by the Investment Manager, including Corporate Income.

PIMCO Corporate Income Fund/PIMCO Income Opportunity Fund

Notes to Financial Statements

April 30, 2011 (unaudited)

8. Legal Proceedings

In June and September 2004, the Investment Manager and certain of its affiliates (including PEA Capital LLC (PEA), Allianz Global Investors Distributors LLC and Allianz Global Investors of America, L.P.) agreed to settle, without admitting or denying the allegations, claims brought by the Securities and Exchange Commission (SEC) and the New Jersey Attorney General alleging violations of federal and state securities laws with respect to certain open-end funds for which the Investment Manager serves as investment adviser. The settlements related to an alleged market timing arrangement in certain open-end funds formerly sub-advised by PEA. The Investment Manager and its affiliates agreed to pay a total of \$68 million to settle the claims. In addition to monetary payments, the settling parties agreed to undertake certain corporate governance, compliance and disclosure reforms related to market timing, and consented to cease and desist orders and censures. Subsequent to these events, PEA deregistered as an investment adviser and dissolved. None of the settlements alleged that any inappropriate activity took place with respect to the Funds.

Since February 2004, the Investment Manager and certain of its affiliates and their employees have been named as defendants in a number of pending lawsuits concerning market timing, which allege the same or similar conduct underlying the regulatory settlements discussed above. The market timing lawsuits have been consolidated in a multi-district litigation proceeding in the U.S. District Court for the District of Maryland (the MDL Court). After a number of claims in the lawsuits were dismissed by the MDL Court, the parties entered into a stipulation of settlement, which was publicly filed with the MDL Court in April 2010, resolving all remaining claims. In April 2011, the MDL Court granted final approval of the settlement.

In addition, in a lawsuit filed in the Northern District of Illinois Eastern Division, plaintiffs challenged certain trades by the Sub-Adviser in the June 2005 10 year futures contract. The Sub-Adviser's position is that all such trades were properly designed to secure best execution for its clients. The parties resolved this matter through settlement, which resolves all of the claims against the Sub-Adviser. In settling this matter, the Sub-Adviser denies any liability. This settlement is purely private in nature and not a regulatory matter.

Beginning in May 2010, several closed-end funds managed by the Investment Manager, including Corporate Income and certain other funds sub-advised by the Sub-Adviser, each received a demand letter from a law firm on behalf of certain common shareholders. The demand letters allege that the Investment Manager and certain officers and trustees of the funds breached their fiduciary duties in connection with the redemption at par of a portion of the funds' ARPS and demand that the boards of trustees take certain action to remedy those alleged breaches. After conducting an investigation in August 2010, the independent trustees of Corporate Income rejected the demands made in the demand letters.

The Investment Manager and the Sub-Adviser believe that these matters are not likely to have a material adverse effect on the Funds or on their ability to perform their respective investment advisory activities relating to the Funds.

9. Subsequent Events

Edgar Filing: PIMCO CORPORATE INCOME FUND - Form N-CSRS

On May 2, 2011, the following dividends were declared to common shareholders payable June 1, 2011 to shareholders of record on May 12, 2011:

Corporate Income	\$0.10625 per common share
Income Opportunity	\$0.19 per common share

On June 1, 2011, the following dividends were declared to common shareholders payable July 1, 2011 to shareholders of record on June 13, 2011:

Corporate Income	\$0.10625 per common share
Income Opportunity	\$0.19 per common share

Portfolio turnover	17%	52%	117%	118%	46%	30%	

- (1) Total investment return is calculated assuming a purchase of a common share at the market price on the first day and a sale of a common share at the market price on the last day of each period reported. Income dividends and capital gain distributions, if any, are assumed, for purposes of this calculation, to be reinvested at prices obtained under the Fund's dividend reinvestment plan. Total investment return does not reflect brokerage commissions or sales charges in connection with the purchase or sale of Fund shares. Total investment return for a period of less than one year is not annualized.
- (2) Calculated on the basis of income and expenses applicable to both common and preferred shares relative to the average net assets of common shareholders.
- (3) Inclusive of expenses offset by custody credits earned on cash balances at the custodian bank (See note 1(o) in Notes to Financial Statements).
- (4) Interest expense primarily relates to the liability for floating rate notes issued in connection with inverse floater transactions and/or participation in reverse repurchase agreement transactions.

Edgar Filing: PIMCO CORPORATE INCOME FUND - Form N-CSRS

- (5) During the years indicated above, the Investment Manager waived a portion of its investment management fee. The effect of such waiver relative to the average net assets of common shareholders was 0.01%, 0.10%, 0.18%, 0.25% and 0.32% for the years ended October 31, 2010, October 31, 2009, October 31, 2008, October 31, 2007 and October 31, 2006, respectively.
- (6) Annualized.

**PIMCO Corporate Income Fund/PIMCO Income Opportunity Fund
Annual Shareholder Meeting Results/Changes to Board of Trustees/
Changes in Investment Policy/Proxy Voting Policies & Procedures (unaudited)**

Annual Shareholder Meeting Results:

Corporate Income and Income Opportunity held their annual meeting of shareholders on April 14, 2011.

Corporate Income:

Common/Preferred shareholders voted as indicated below:

	Affirmative	Withheld Authority
Election of Bradford K. Gallagher Class III to serve until 2014	32,772,062	484,344
Election of Alan Rappaport Class I to serve until 2012	32,797,890	458,516
Re-election of John C. Maney Class III to serve until 2014	32,693,290	563,116

The other members of the Board of Trustees at the time of the meeting, namely Messrs. Paul Belica, James A. Jacobson*, Hans W. Kertess* and William B. Ogden, IV, continued to serve as Trustees.

Income Opportunity:

Shareholders voted as indicated below:

	Affirmative	Withheld Authority
Election of Bradford K. Gallagher Class III to serve until 2014	13,263,505	165,393
Election of Alan Rappaport Class III to serve until 2014	13,257,022	171,876

The other members of the Board of Trustees at the time of the meeting, namely Messrs. Paul Belica, James A. Jacobson, Hans W. Kertess, John C. Maney and William B. Ogden, IV, continued to serve as Trustees.

* Preferred Shares Trustee

Interested Trustee

Changes to Board of Trustees:

Effective June 14, 2011, the Funds' Board of Trustees appointed Deborah A. Zoullas as a Class II Trustee for Corporate Income and a Class I Trustee for Income Opportunity to serve until 2012.

Changes in Investment Policy – Corporate Income:

Effective April 20, 2011, Corporate Income's duration guidelines were expanded such that, under normal market conditions, the Fund will maintain an average portfolio duration of between zero and eight years. Corporate Income previously observed intermediate average portfolio duration ranges – normally between three and seven years.

Duration is a measure of the expected life of a debt security that is used to determine the sensitivity of the security's price to changes in interest rates. Generally, the longer a security's duration, the more sensitive it will be to changes in interest rates – i.e., the prices of debt obligations typically fall when market interest rates rise. Please see 2. Principal Risks in the Notes to Financial Statements for additional discussion of interest rate risk.

Proxy Voting Policies & Procedures:

A description of the policies and procedures that the Funds have adopted to determine how to vote proxies relating to portfolio securities and information about how the Funds voted proxies relating to portfolio securities held during the most recent twelve month period ended June 30 is available (i) without charge, upon request, by calling the Funds' shareholder servicing agent at (800) 254-5197; (ii) on the Funds' website at www.allianzinvestors.com/closedendfunds; and (iii) on the Securities and Exchange Commission website at www.sec.gov

This report, including the financial information herein, is transmitted to the shareholders of PIMCO Corporate Income Fund and PIMCO Income Opportunity Fund for their information. It is not a prospectus, circular or representation intended for use in the purchase of shares of the Funds or any securities mentioned in this report.

The financial information included herein is taken from the records of the Funds without examination by an independent registered public accounting firm, who did not express an opinion herein.

Notice is hereby given in accordance with Section 23(c) of the Investment Company Act of 1940, as amended, that from time to time the Funds may purchase their common shares in the open market.

The Funds file their complete schedules of portfolio holdings with the Securities and Exchange Commission (SEC) for the first and third quarters of their fiscal year on Form N-Q. Each Fund s Form N-Q is available on the SEC s website at www.sec.gov and may be reviewed and copied at the SEC s Public Reference Room in Washington, D.C. Information on the operation of the Public Reference Room may be obtained by calling (800) SEC-0330. The information on Form N-Q is also available on the Funds website at www.allianzinvestors.com/closedendfunds.

Information on the Funds is available at www.allianzinvestors.com/closedendfunds or by calling the Funds shareholder servicing agent at (800) 254-5197.

Receive this report electronically and eliminate paper mailings.
