**Item 1.01. Entry into a Material Definitive Agreement**

On February 27, 2012, Linn Energy, LLC (the Company) entered into, through one of its wholly-owned subsidiaries, a definitive purchase agreement (the Agreement) to acquire certain oil and gas properties located in the Hugoton Basin area of Southwestern Kansas from BP America Production Company for a contract price of \$1.2 billion, subject to closing conditions (the Hugoton Acquisition). Pursuant to the terms of the Agreement, the Company made a deposit with the seller equal to \$360.0 million. The seller is permitted to retain all or a portion of this deposit for a termination of the agreement under certain circumstances. The Company anticipates the Hugoton Acquisition will close on or before March 30, 2012, and will be financed with net proceeds from a private offering by the Company and its subsidiary, Linn Energy Finance Corp., of \$1.5 billion in aggregate principal amount of senior unsecured notes due 2019 (the Notes Offering). There can be no assurance that all of the conditions to closing the Hugoton Acquisition will be satisfied.

A copy of the press release announcing the Hugoton Acquisition is attached hereto as Exhibit 99.1.

- (1) Includes certain outstanding natural gas puts of approximately 7,964 MMBtu for the year ended December 31, 2012, 10,570 MMBtu for each of the years ending December 31, 2013, December 31, 2014, and December 31, 2015, and 10,599 MMBtu for the year ended December 31, 2016, used to hedge revenues associated with NGL production.
- (2) Includes certain outstanding fixed price oil swaps on 14,750 Bbls of daily production which may be extended annually at a price of \$100.00 per Bbl for each of the years ending December 31, 2016,

December 31, 2017, and December 31, 2018, if the counterparties determine that the strike prices are in-the-money on a designated date in each respective preceding year. The extension for each year is exercisable without respect to the other years.

- (3) Settle on the respective pricing index to hedge basis differential associated with natural gas production.
- (4) We hedge the timing risk associated with the sales price of oil in the Mid-Continent Deep, Mid-Continent Shallow and Permian Basin regions. In these regions, we generally sell oil for the delivery month at a sales price based on the average NYMEX price of light crude oil during that month, plus an adjustment calculated as a spread between the weighted average prices of the delivery month, the next month and the following month during the period when the delivery month is prompt (the trade month roll).
