Forward-looking statements

This quarterly report contains forward-looking statements within the meaning of the United States Private Securities Litigation Reform Act of 1995 with respect to Harmony's financial condition, results of operations, business strategies, operating efficiencies, competitive positions, growth opportunities for existing services, plans and objectives of management, markets for stock and other matters. Statements in this quarter that are not historical facts are "forward-looking statements" for the purpose of the safe harbor provided by Section 21E of the U.S. Securities Exchange Act of 1934, as amended, and Section 27A of the U.S. Securities Act of 1933, as amended. Forward-looking statements are statements that are not historical facts. These statements include financial projections and estimates and their underlying assumptions, statements regarding plans, objectives and expectations with respect to future operations, products and services, and statements regarding future performance. Forward-looking statements are generally identified by the words "expect", "anticipates", "believes", "intends", "estimates" and similar expressions. These statements are only predictions. All forward-looking statements involve a number of risks, uncertainties and other factors and we cannot assure you that such statements will prove to be correct. Risks, uncertainties and other factors could cause actual events or results to differ from those expressed or implied by the forward-looking statements.

These forward-looking statements, including, among others, those relating to the future business prospects, revenues and income of Harmony, wherever they may occur in this quarterly report and the exhibits to this quarterly report, are necessarily estimates reflecting the best judgment of the senior management of Harmony and involve a number of risks and uncertainties that could cause actual results to differ materially from those suggested by the forward-looking statements. As a consequence, these forward-looking statements should be considered in light of various important factors, including those set forth in this quarterly report. Important factors that could cause actual results to differ materially from estimates or projections contained in the forward-looking statements include, without limitation:

- overall economic and business conditions in South Africa and elsewhere;
- the ability to achieve anticipated efficiencies and other cost savings in connection with past and future acquisitions;
- increases/decreases in the market price of gold;
- the occurrence of hazards associated with underground and surface gold mining;
- the occurrence of labour disruptions;

availability, terms and deployment of capital;  
changes in government regulation, particularly  
mining rights and environmental regulations;  
fluctuations in exchange rates;  
currency devaluations and other macro-  
economic monetary policies; and  
socio-economic instability in South Africa and  
regionally.

## Chief Executive Officer's Review

**Overview**

The turnaround at Harmony continues with an increase in profitability on the back of favourable market conditions and restructuring for more quality ounces. 'Fixing the mix' – was a primary focus in the quarter under review. Costs were well-controlled and a higher Rand gold price received helped us towards significantly improved profit levels. Work continued on the commissioning of our growth projects and on production planning for the Pamodzi Gold Free State assets. In addition, we reported some very exciting exploration results out of Papua New Guinea (PNG).

**Safety**

With deep regret, I must report that five of our colleagues died in work-related incidents during the quarter. Those who died were: Lekhetho Ranko, a team leader at Bambanani, Ashley Nortje a boilermaker, and Keith Coleman, a maintenance technician, both at Target; Lebusa Elia, a team leader at Virginia Operations; and Martin Thosa, a night shift cleaner at Elandsrand. I would like to extend my deepest condolences to their families, friends and colleagues. Our Fatal Injury Frequency Rate (FIFR) showed an encouraging improvement quarter on quarter. Whilst the current quarter has not been great, safety is a high priority and is being constantly addressed. The rewards of these will be seen in time.

Detailed coverage of our safety and health performance and the measures taken to ensure a safe working environment is contained in the safety and health section on page 5.

**Gold market**

The South African Rand was stronger against the US Dollar during the quarter, the exchange rate averaging R7.49/US\$ compared with R7.78/US\$ in the previous quarter.

The US Dollar gold price averaged \$1 100/oz, up 14.9% on the previous quarter, pointing to the metal's continuing robustness as world economies recover from the meltdown of 2008. Consequently, the Rand gold price we received for our production averaged R264 774/kg, a 10.6% improvement quarter on quarter.

What matters primarily to us as a dominant South African gold producer, is of course the Rand gold price we receive, the determinant of which is the Rand/Dollar exchange rate. While the higher Rand gold price received during the December 2009 quarter was most welcome, we still hold the view that general Rand strength is likely to continue for so long as any global economic uncertainties last. We therefore expect the gold price to remain fairly flat for the next 12 months in R/kg terms.

**Operating and financial results**

Gold production for the quarter was down 1.2% to 11 569kg as expected, mainly due to the restructuring, more detail of which is provided below. Underground volume was 6.2% lower at 2 243 000t, underground grade flat at 4.51g/t, and underground production thus 5.7% lower at 325 268oz. Surface volumes increased by 22.9% to 2 681 000t. Combined with a 20% increase in grade to 0.54g/t,

resulted in surface production increasing by 46.8% to 46 688oz.

The increase in surface production can mainly be attributed to our opencast operations at PNG.

The aforementioned improvement in the average Rand gold price we received resulted in an 8.2% increase in revenue to R2 971 million, and after accounting for total cash operating costs – 1% lower at R2 172 million mainly because of the lower summer electricity tariff – cash operating profit was 44.9% higher at R800 million.

Further financial and operating results information is contained in the financial overview on page 5, and in the operational overview commencing on page 6.

### **Restructuring for sustained profitability**

As part of our stated strategy, cutbacks from marginal loss-making mining operations at Harmony could be expected. Our objective is to eliminate high-cost ounces from our production profile.

We carefully reviewed our asset portfolio over a period of some months.

During the December 2009 quarter there was an intense focus on the uneconomical operations – specifically, Harmony 2 shaft, Merriespruit 1 and 3 shafts, and Brand 3 shaft, all contained within the Virginia operations; and the Evander 2, 5 and 7 shafts.

Brand 3 and Evander 7 ceased production, mainly due to depletion of their ore bodies, mature infrastructure and low grades. A number of their employees were redeployed to our growth projects to fill vacancies or to replace contractors at other operations.

Evander 2 and 5 were placed on care and maintenance during January 2010. We will continue to closely monitor Harmony 2, while the Merriespruit shafts appear to have remaining potential, provided they meet their production targets. It is likely that we will be able to minimise further retrenchments by absorbing some employees at the Pamodzi Gold Free State operations.

### **Growth project commissioning**

The Company continued to focus on commissioning growth projects during the quarter, which showed encouraging results.

At Phakisa, volume increased by 22.5%, while recovery from the previous quarter's geological interferences and resolution of infrastructure problems were adequately addressed. Tshepong's grade challenge is expected to continue until production from the less erratic, higher-grade Sub-66 Decline area builds up. At Bambanani, the Shaft Pillar Extraction Project is gaining momentum, with development well under way.

Doornkop shaft received ISO 14001 accreditation in December 2009, the first Harmony operation to achieve this. Work during the Christmas break helped to reduce the impact of a shaft barrel delay on shaft equipping. While Elandsrand had a disappointing production quarter, the No 1 settler dam was sealed and pre-commissioning of the 115 level pump station was completed in preparation for full commissioning during the March 2010 quarter. The 100 level refrigeration complex construction is 90% complete, with completion planned for November 2010.

In PNG, remaining sections of the Hidden Valley process plant were completed in October 2009 and the overland conveyor in early December 2009. The past quarter yielded 43 028oz of gold production and 53 081oz of silver, 50% of which is attributable to Harmony. Hidden Valley is expected to reach commercial levels of production in March 2010 quarter.

**4**

Results for the second quarter and six months

**ended 31 December 2009**

**Progressing other projects**

The business plan for the Pamodzi Gold Free State assets was completed during the quarter, the key milestones of which include: production of 18kg of gold a month from rock dump milling at Target. Our planning includes the recovery of some 800kg of gold from the plant clean-up; and production build-up from the underground assets to 150 000oz over the next 24 months. The reserve and resource estimates are currently being revised.

Re-treatment of surface tailings is proving to be an attractive proposition from both safety and cost perspectives. At our Phoenix Project in the Free State, we plan to increase volume by 400 000tpm to 900 000tpm, and at the nearby and re-commissioned Project Saints the mothballed St Helena plant will be upgraded to treat surface tailings over a period of at least 20 years. We are looking at financing options to fund these projects.

Project TPM is evaluating the potential for the economic recovery of uranium from the higher grade uranium ore mined at Tshepong, Phakisa and Masimong. Current activities include resource estimation, environmental studies, process and plant design, as well as metallurgical and flotation test work. We are now entering a 12-month feasibility stage.

**Exploration**

Drilling at the Morobe Mining Joint Venture's Golpu West prospect in Papua New Guinea has achieved several highly significant intercepts of porphyry copper gold mineralisation. These form a new zone of mineralisation immediately west of the known Golpu resource. Although the mineralisation is open at depth and along strike, it is evident that this new discovery will have a material effect on the Golpu resource base and mining studies.

A new zone of epithermal gold mineralisation was outlined in initial drilling at the Northern Diatreme Margin prospect at Wafi, and a major new gold anomaly defined through reconnaissance stream sediment sampling at Bavaga. The latter lies about 6km north of the Wafi-Golpu project, on the Wafi transfer structure. The size of the footprint (>1 km in diameter) and the tenor of the anomaly (>1 g/t Au) are particularly encouraging and suggest potential for a significant gold deposit.

Further information on our exploration activities is contained in the exploration section commencing on page 12.

**Harmony team**

Hannes Meyer was appointed as financial director designate on 1 August 2009 and officially took over Harmony's financial director's responsibilities from Frank Abbott on 1 November 2009, following his appointment to Harmony's Board as executive director. Hannes is a qualified chartered accountant with more than 14 years' experience in the mining industry. He brings with him vast knowledge and experience of the mining industry from a financial perspective and he has already proven to be an asset to Harmony.

Frank Abbott agreed to continue to serve on the Harmony Board as an executive director for the next 12 months, as from January 2010. Frank will focus on the strategic direction and growth of the company. We are delighted that we have these two individuals on our team and look forward to the contributions they will make.

**Looking ahead**

We will push ahead with the commissioning of our growth projects, in order to bring to account their quality ounces, and we will continue to pursue profitable growth opportunities – organically, by acquisition and through forging strategic partnerships. Our immediate goal remains generating profitable ounces of production and earnings to reward our shareholders, both through dividends and future growth. We have made good progress in this regard, having produced 748 555oz for the six months ended 31 December 2009. We will continue to engage in robust, constructive debate on issues that may affect the South African mining industry – in particular the outrageous power price increases being considered and the nationalisation of the mines.

**Graham Briggs**

**Chief Executive Officer**

**Our strategy:**

**generating sustainable profitable ounces to fund growth and dividends**

**5**

## Safety and health

**Safety**

Harmony continues to focus on sustainable safety improvements. Our management team is committed to ensuring that safety remains a priority at Harmony and to ensure that safety procedures and protocols of the highest standards are implemented at all Harmony's operations. Regrettably, five fatalities were recorded during the quarter under review. Falls of ground and tramming accidents remain the main causes of the accidents.

We are pleased to announce that during the December 2009 quarter, a single digit Lost Time Injury Frequency Rate (LTIFR) was achieved for the fifth consecutive quarter and also improved by 18% on year-to-date figures from 9.35 to 7.64. However, the LTIFR dropped 20% from 6.91 in the previous quarter to 8.30. The Fatality Injury Frequency Rate (FIFR) indicated a remarkable improvement of 38% quarter on quarter from 0.32 to 0.20. However, the year to date figure deteriorated 24% from 0.21 to 0.26. The year to date Reportable injury Frequency Rate (RIFR) improved by 18% when compared to the actual figure for the previous year (from 4.97 to 4.09), but regressed by 29% quarter on quarter (from 3.55 to 4.59).

A significant amount of attention was directed towards safety management during the quarter under review. Management has played a significant role in setting safety objectives and in developing safety strategies that continue to focus on:

- management leading by example;
- involvement of all stakeholders;
- compliance with standards, and the auditing thereof;

**Financial overview**

Cash operating profit was 44.9% higher at R800 million due to a higher average Rand gold price received and lower cash operating costs counteracting the impact of lower gold production and gold sold (excluding ounces from Hidden Valley).

**Earnings per share**

Basic earnings per share increased from a loss of 7 SA cents to earnings of 28 SA cents. Similarly, headline earnings increased from a headline loss of 12 SA cents to headline earnings of 49 SA cents.

This improvement can be attributed to an increase in revenue.

**Revenue**

A 10.6% increase in the average Rand gold price received to R264 774/kg took revenue 8.2% higher to R2 971 million in spite of a 6.2% decrease in gold production to 10 900kg (excluding gold production at Hidden Valley) and a 2.2% decrease in gold sold to 11 224kg (excluding gold sold at Hidden Valley).

**Costs**

Total cash operating costs were 1% lower at R2 172 million due mainly to the lower summer-month electricity tariff applicable. Cash operating unit costs rose by 2% to R192 101/kg due to lower gold production.

- behaviour-based campaigns and initiatives;
- recognition of achievements; and

in situ training, particularly in hazard identification and risk assessment.

Harmony's commitment to zero fatalities is communicated to employees on a regular basis, at every level of the company with a persistent, deliberate and consistent safety awareness effort. We have a comprehensive safety auditing programme (first reported in FY07) in place to assess the physical workplace, compliance with fall of ground regulations, shafts and metallurgical processes (specifically in relation to compliance with the Cyanide Code).

More than 90% of the group's South African workforce participated in formal joint management-worker health and safety committees that participate in occupational health and safety programmes.

The following operations achieved outstanding safety results:

Harmony Total Operations – 1 000 000 fatality free shifts twice during the quarter

Ernest Oppenheimer Hospital – 4 000 000 fatality free shifts

Harmony 2 and Merriespruit 1 and 3 operations as a unit – 2 500 000 fatality free shifts

Randfontein Medical Bureau – 1 250 000 fatality free shifts

Tshepong – 750 000 fatality free shifts

Evander 8 shaft – 2 250 000 fatality free shifts

Free State Surface Operations – 2 000 000 fatality free shifts

#### **Capital expenditure**

Total capital expenditure was 2.5% lower at R892 million. While capital expenditure for the South African operations increased by 6.8% to R711 million, Hidden Valley capital expenditure was 27.3% lower at R181 million due to completion of construction at the site starting to come to an end.

#### **Impairment of assets**

An impairment of R67 million for Evander 2 and 5 shafts and R37 million for Brand 3 shaft were recorded following the decision to place these shafts on care and maintenance.

#### **Security costs**

Security costs increased by 19% to R90.5 million in calendar year 2009, in comparison to calendar year 2008 (R76 million), mainly due to additional measures being put in place to curb criminal mining.

#### **Disposals**

The remaining Avoca shares were disposed of in October 2009 for A\$4.1 million.

#### **Nedbank facility**

The Company entered into loan facilities with Nedbank Limited in December 2009. One being term facility of R900 million and the other a revolving credit facility of R600 million to pay for the acquisition of the Pamodzi Free State assets and to create financial flexibility.

Safety during the quarter was poor. A fall of ground (FOG) fatality was recorded and far-reaching corrective measures were taken as a consequence, including a change in the mining method used in steeply dipping, high-stopping-width panels from breast to down-dip. An 18% improvement in recovered grade to 7.58g/t helped to contain the impact of a 16% drop in volume to 123 000t and gold production was 2% lower at 932kg.

Higher grade resulted both from moving of panels during October 2009 and from the achievement of required volumes from higher-grade panels. Grade is expected to be maintained going forward by moving of crews from low-grade areas to higher-grade areas in the upper shaft.

Lower volume was a consequence both of the aforementioned change in mining method and from generally unsatisfactory performance during December 2009.

Cash costs were 10% lower at R179 746/kg, mainly as a result of lower summer-month electricity tariffs applicable.

A 97% improvement in cash operating profit to R80 million resulted both from a higher Rand gold price received and lower costs.

Capital expenditure was 21% higher, reflecting the growing momentum of the Shaft Pillar Extraction Project.

Even more focus on safety-related matters resulted in improved procedures, training, maintenance and behaviour. The Doornkop shaft received ISO 14001 accreditation in December 2009, the first Harmony operation to achieve this milestone.

While volume improved by 14% to 148 000t, reflecting a 26% increase in square metres blasted, recovered grade was 14% lower at 3.31g/t, resulting in a 2% decline in gold production to 490kg.

Lower recovered grade was a consequence both of tonnage locked During the quarter, a safety statistics audit conducted by the auditors revealed that under-reporting of accidents took place at Harmony's Phakisa mine during the period August to November 2009. Appropriate measures have been taken to rectify this and to ensure that all accidents are correctly recorded going forward.

#### **Health**

Harmony continues to roll out and invest in initiatives and healthcare programmes to protect the well-being of our employees and improve productivity of the company going forward.

In terms of occupational hygiene, noise and dust, we are pleased to announce that the implementation of personalised hearing protection devices (HPD's) is about 87% completed. The installation of sound attenuators on mechanical loaders has been scheduled and some operations have already begun with the installation process.

Furthermore, Harmony hosted the Chamber of Mines MOSH dust mini-summit on 12 November 2009 in the Free State, which bares testimony to our pro-active initiatives that are recognised by external stakeholders. Also during the quarter under review, the north and south airborne pollutant laboratories were audited by an external authority and we are pleased to announce that we achieved an overall compliance of 97%.

7

up underground due to a fire on the main feed conveyor belt to the plant and a plant thickener breakdown.

Cash costs rose by 16% to R198 561/kg, mainly as a result of planned labour build-up to meet the operation's future production profile.

Cash operating profit was 70% higher at R31.4 million however, reflecting the higher Rand gold price received.

While shaft barrel delays at the South Reef Project caused equipping to fall behind, 14 days were gained during the Christmas break and the North and South Rock Winder compartments are now equipped to 212 level. The construction of the 212 level conveyor belt is expected to be completed by February 2010.

Increased seismicity during the quarter resulted in one fatality and a rise in the number of lost time injuries. As a consequence pre-conditioning of stope faces has been improved to reduce the risk of face ejection resulting from small, volatile seismic events, and a broader range of safety initiatives continue to be applied.

Gold production was 15% lower at 1 387kg, reflecting a 10% decline in volume to 235 000t and a 6% drop in recovered grade to 5.90g/t.

Lower volume resulted from a lack of available face length and from five production shifts lost, three due to a Section 54 instruction following the fatality, one to a power outage caused by a faulty transformer at the Eskom sub-station and one to a compressor breakdown. Lower recovered grade was a consequence of lower face grade, mine call factor and the treatment of low-grade tonnage from a dam clean-up in the plant.

While cash operating costs were 9% higher at R199 147, reflecting lower production, cash operating profit was 47% higher at R101 million due to the improved Rand gold price received.

Safety performance was satisfactory at Evander.  
 Volume was 5% lower at 245 000t and recovered grade 10% lower at 4.31g/t, resulting in a 15% decline in gold production to 1 057kg. Lower volume was mainly the result of the closure of Evander 7 shaft in December 2009 and panels stopped at Evander 8 shaft because of high temperatures. Steps to improve ventilation at Evander 8 shaft have been taken. Lower recovered grade resulted primarily from a 5% decline in face grade and in mine call factor.  
 Cash operating costs were 10% higher at R249 411/kg, due mainly to the drop in gold production. Cash operating profit was 38% higher at R23.4 million due to the higher Rand gold price received.  
 The impact of the closure of Evander 2 and 5 shafts in January 2010 will reflect in the operation's results for the quarter ended 31 March 2010.

Joel recorded a very satisfactory quarter from a safety perspective, being fatality-free for more than two years.

While volume declined by 18% to 112 000t, recovered grade was 39% higher at 5.28g/t, resulting in a 15% increase in gold production to 591kg.

Lower volume was due to lower tonnes mined in December 2009 arising from a drop in stopping width, raise boring of the extension

**8**

Results for the second quarter and six months

**ended 31 December 2009**

to the lift shaft and a mud rush on the belt level. Higher recovered grade was due to increased face grade in the west, more vamping in the upper mine and reduced stoping widths.

Cash operating costs were 16% lower at R167 232/kg, reflecting higher gold production, lower electricity costs and good stores controls. Cash operating profit was 159% higher at R59.4 million due to higher gold production and an increase in the Rand gold price received.

Capital expenditure increased by 82% from R17.8 million to R32.4 million mainly due to the continued capital being spent on the re-commissioning of Joel plant. Joel plant started treating ore from Joel shaft during the December 2009 quarter.

Raise boring of the lift shaft extension to 129 level has been completed. Cleaning operations are in progress which will be followed by shaft support work and equipping. Completion is expected in September 2010.

 Masimong reported very good safety results with an improvement in both LTIFR and RIFR.  
 Gold production was 9% lower at 1 242kg. While volume was flat at 235 000t, recovered grade was 9% lower at 5.29g/t due to a drop in B Reef grades. The Basal Reef panels stayed fairly constant and will continue to do so.  
 Cash operating costs were 4% higher at 142 754/kg, a consequence of the lower gold production. Masimong remains the lowest R/kg cost producer in the company, including surface operations. A higher Rand gold price received resulted in an 8% increase in cash operating profit to R149.7 million.  
 Capital was 16% higher at R45.0 million but lower than planned due to the delayed delivery of emergency generators and fridge plant, now scheduled to arrive in the third and fourth quarters of FY10.

Safety indicators deteriorated quarter on quarter, pointing to a need for re-focus.

Gold production rose by 35% to 350kg, reflecting a 23% increase in volume to 87 000t and a 10% improvement in recovered grade to 4.02g/t. Volume, nonetheless, was below expectation as the mine continues to address geological issues and down-time on new infrastructure.

Cash operating costs were 3% lower at R216 006/kg. Higher gold production and a higher Rand gold price received led to a 222% increase in cash operating profit to R16.9 million.

The third railveyor train was commissioned during the December 2009 break, thus completing railveyor infrastructure for full production. Fine-tuning of the Phase 1 infrastructure – in particular, the remaining four ice plants and the rock handling system – continues.

Target recorded two fatalities during the quarter. Fall of ground prevention has become a major focus, and in the narrow reef mining section where seismicity has increased, all panels are now mined

with safety nets installed on the faces.

**9**

While volume was only 1% lower at 191 000t, recovered grade was 12% lower at 4.14g/t compared with the previous quarter's unexpected high of 4.71g/t, resulting in a 13% drop in gold production to 791kg. Contributing to volume stability is improved availability of massive stopes through better planning and design, and the return to production of all 10 narrow reef mining panels following resolution of ventilation and cooling challenges. Ore reserve management (ORM) remains crucial to Target's success going forward; with this in mind, the ORM team has recently undergone further training and development.

Cash operating costs were 10% higher at R182 513/kg as a result of lower grade. Lower electricity, plant and contractor costs and rationalisation of the trackless fleet will assist in reducing costs in future. Cash operating profit was 22% lower at R46.6 million due to lower gold production.

Tshepong was fatality-free for the second consecutive quarter, a notable achievement, and reflective of the success of various safety initiatives.

Gold production was flat at 1 692kg, a 5% increase in recovered grade to 4.27g/t compensating for a 5% decline in volume to 396 000t caused by the shorter December delivery month. Face grade remains a challenge due to mining at the edge of the pay shoot where values are more erratic but improvements carried out to the Harmony 1 Plant are reflected in the higher recovered grade. Cash operating costs were 4% down at R162 528/kg, due mainly to lower electricity costs. This, together with a higher Rand gold price received resulted in a 39% improvement in cash operating profit to R176 million.

Capital expenditure was 19% lower due to less spent on the Sub 71 Decline project and delays in the delivery of the emergency generators.

Virginia Operations recorded one fatality during the quarter, at the Merriespruit 3 shaft.

The Virginia Operations recorded a better quarter, reflecting the impact of restructuring (closure of Brand 3 shaft). While a 10% increase in recovered grade to 3.37g/t did not compensate for a 13% drop in volume to 471 000t and gold production was consequently 5% lower at 1 585kg, cash operating costs were down 3% to R241 214/kg. This, together with a higher Rand gold price received, resulted in a cash operating profit of R38.3 million compared with the previous quarter's R14.5 million loss.

Kalgold recorded a lost time injury-free quarter.

Gold production was 16% lower at 350kg, reflecting lower volume – down 6% to 423 000t from the September quarter’s exceptional high of 452 000t – and lower recovered grade, down 10% to 0.83g/t. Heavy rain both restricted mining in the open pit and caused oxidised material to form clay, which negatively affected milling efficiency.

Cash operating costs were 7% higher at R185 666/kg, but cash operating profit rose by 119% to R32.4 million due to the higher Rand gold price received.

1 503

(32)

Gold production increased by 14% to 185kg, reflecting a 10% increase in volume to 1 522 000t, above design capacity of 1 500 000t, and a 4% increase in recovered grade to 0.122g/t.

Improved grade was as a result of mining the Brand A dam's higher-grade bottom strip.

Cash operating costs were 11% lower at R154 497/kg, and a range of measures are in process to reduce costs further. Cash operating profit was 88% higher at R20.6 million due to higher production, lower costs and a higher Rand gold price received.

No accidents were reported for the quarter.

While volume increased by 35% to 347 000t, grade was 41% lower at 0.71g/t. Gold production was 21% lower however, mainly because 93kg of gold from the Winkelhaak plant mill clean-up was reported in the September quarter.

Cash operating costs were substantially higher in the quarter under review as a consequence at R170 339/kg, and cash operating profit was 44% lower at R23.9 million.

## 11

### Development

**Note:** The ore reserve block grades reflect the grades of the blocks in the life of mine plans of the various operations. Those blocks are to a large degree

the blocks above a certain cut off grade that has been targeted for mining. The development grades are the grades as sampled in the ongoing

on-reef development at the operations and no selectivity has been applied from a grade point of view.

### **Bambanani**

The Bambanani ore reserve grade is to a large degree a reflection of the future extraction of the high grade Basal Reef shaft pillar. All the on reef development is currently taking place in the sub-shaft area where the grades are lower than the average reserve grade. There has however been an improvement in the quarter to quarter development grades in line with expectations. No on-reef development was planned in the high grade shaft pillar during the quarter.

### **Doornkop**

There was a further quarter on quarter increase in the South Reef development grades and it is in line with the reserve grade. There was however a quarter on quarter drop in the grade in the Kimberley reef due to facies changes as well as partial exposure of the channel in certain areas.

### **Elandsrand**

Good grades in line with expectations were intersected in both the old and new mine resulting in a quarter on quarter improvement in development grade.

### **Evander**

There was a significant quarter on quarter improvement in grade as the raises advanced from the edge of the payshoot into the payshoot. Increase in grades expected to continue.

### **Joel**

Most of the on reef development is directed towards 129 level in the form of winzes (down dip on reef development). Good grades continues to be intersected which resulted in an increase in quarter on quarter development grades. The rolling four-quarter development grade remains higher than the reserve grade.

### International operations

#### **Hidden Valley**

Harmony's 50% share of gold production for the quarter was 21 514 ounces. Construction of the 5km overland conveyor linking the Hidden Valley pit with the processing plant was completed during the quarter.

The processing plant ramp up continued during the quarter with ore sourced from the Hamata and Hidden Valley pits and mill throughput reaching 85% of design capacity in December. The processing plant is expected to reach full production during the March 2010 quarter following commissioning of the flotation circuit.

Hidden Valley will be fully commissioned for mining and process throughput by the end of January 2010 but the process plant profile for full recovery of both gold and silver will not be finalised until the end of February. The original design capacity for the Hidden Valley mine and processing plant will be achieved during the fourth quarter

of FY10.

## 12

Results for the second quarter and six months

**ended 31 December 2009**

Exploration

### **Evander 6 shaft and Twistdraai (Joint Venture with Taung)**

Harmony's objective for these areas is to complete a bankable feasibility study of the two areas within five years. As soon as we have received permission from the Department of Mineral Resources (DMR) to begin the surface drilling, we will commence with the drilling process.

A study entailing a detailed mine plan and schedule of the Evander 6 shaft was completed during the quarter. The purpose of the study is to optimise the extraction of the orebody and improve the project financials.

### **Evander South surface drilling**

Good progress was made with the drilling programme during the quarter. A total of 1 420 metres were drilled and the drilling was completed in October 2009. A total of 24 671 metres were drilled, which was 2% above the planned 24 072 metres. Demobilisation of rigs and rehabilitation of the drilling sites concluded the drilling programme. Costs were 3% under budget.

Pleasing sampling results for 15 boreholes were received during the quarter. A preliminary update of the geological (datamine) model using the results obtained to date was completed towards the end of December 2009.

### **Poplar**

The Poplar project refers to the region in the north of the Evander basin. We plan to continue with the drilling programme and to re-evaluate the ore resource.

The Phase 1 programme will involve the drilling of 25 holes (19 500 m).

Eight holes from the previous programme, which had been piloted, will be re-drilled (7 800 m) and a further 17 holes (11 700 m) drilled.

The programme is scheduled to take 12 months to complete.

### **Waste Metres / Reef Metres / Ave cmg/t**

#### **Masimong**

Masimong had a disappointing quarter in terms of on-reef development due to an underperformance on the 'B' Reef drives and the grades in the Basal Reef development also being below expectation.

#### **Phakisa**

The on reef development is still close to the shaft in the lower-grade southern areas. Grades have however improved quarter on quarter and will further improve as the development progress towards the north and more reef is exposed within the major north west- to south east-trending Basal Reef payshoot.

#### **Target (narrow reef mining)**

Development sampling is reported only on those raises being developed for "gold" as distinct from those raises developed on selected horizons to "de-stress" future massive stopes. Figures represent only 35 metres (7 sections) of Raise and these values are not really representative of the narrow reef grade, nor indeed of the

mine as a whole. It is important to note that, after a period of limited raise development, raise metres are on the increase at Target and next quarter's results ought to be a little more representative.

**Tshepong**

There was a quarter on quarter decrease in development grades as a large proportion of the on-reef development is currently taking place on the edges of the Tshepong payshoot. The development grade is expected to improve as new raise lines becomes available within the deeper extension of the payshoot in the Sub 66 and Sub 71 decline areas and the B reef development moves into high grade channels.

**Virginia**

In general, the development at Unisel produced good results, especially on the Basal reef and Leader reef development. Middle reef grades were disappointing due to areas of increased channelisation that was intersected The development grades were lower than expected at Merriespruit and Harmony 2.

## 13

### **Joel North surface drilling – exploration progress**

The current surface drilling programme at Joel North involves drilling six holes to a depth of between 1 300m and 1 400m to the north of the current Joel mine workings to allow an upgrade of the resource between 129 level and 137 level.

During the quarter, a fourth diamond drilling machine was brought on site. LB24 was completed in November 2009 with five deflections having been drilled. LB23 has also intersected reef and the deflections are now being drilled. LB23 is expected to be completed by the end of January 2010, whilst LB25 and LB27 will be finished early in February 2010. LB22 and LB28 will continue into March 2010. The programme is about 70% complete and projected completion is scheduled for April 2010.

### **Project Saints**

Project Saints entails the re-treating of surface tailings in the Free State at a rate of 1 million tonnes per month. During the quarter a final feasibility gate-keeping session was held to consider the outstanding items from the previous feasibility gate-keeping. Re-drilling where necessary was completed, assays received and the models were updated.

### **Phoenix expansion**

The current Phoenix project (Saaiplaas plant) has been operating for almost three years and involves the re-treating of 500 000 tpm of tailings. It is planned to increase the tonnage throughput at Phoenix by 400 000 tpm to 900 000 tpm. At the increased throughput rate, the life of the project is 12 years after which deposition capacity will run out. Further resources will be available to be treated if more deposition capacity is permitted within this 12-year period.

### **Project Libra**

With regards to Project Libra, the re-treating of surface tailings at a rate of 1 million tonnes per month from the Winkelhaak, Leslie and Kinross tailings dams at Evander, the start of the Environmental Impact Assessment (EIA) study has been postponed due to a final tailings deposition site not having been determined.

During the quarter under review dams were re-drilled and the samples assayed. These processes are continuing. Final assay and recovery results are due and thereafter the optimal way to mine the dams will be determined and a production schedule drawn up.

### **Project TPM**

During the quarter, the pilot flotation plant was erected and commissioned. The primary aim of the plant is to confirm sulphur recoveries and to optimise the reagent suite for the proposed TPM plant using live feed from the Harmony 1 plant.

Good progress on the EIA, which is due for submission in March 2010, was made during the December 2009 quarter. Furthermore, a comprehensive set of procedures pertaining to uranium sampling and assaying was also completed.

The only outstanding aspect of the pre-feasibility study is the declaration of a resource and reserve. An application for capital to proceed with the feasibility study and demonstration plant has been put forward. The feasibility study will develop and present a comprehensive and detailed description of the final optimised process and plant design for the project.

#### **St Helena 10 shaft**

This project involves the re-opening of St Helena 10 shaft. During the December quarter, the block plans incorporating the faulting structure were prepared and a two dimensional model built.

A mining schedule was drawn up and more accurate capital and operating costs were determined.

Harmony's application for power at St Helena 8 and 10 shafts was approved by Eskom during the quarter under review. We have submitted an amended EMP to the DMR and are awaiting a response.

#### **Exploration – Morobe JV (50%)**

Morobe JV drilling during the quarter included testing of priority target areas at Wafi-Golpu and ongoing resource definition at Hidden Valley.

#### **Wafi**

At Wafi, drilling continued testing the epithermal gold mineralisation at the Northern margin of the diatreme. Significant results include:

- **WR318:**

21.8m @ 1.45g/t Au, 9.02g/t Ag from 66m

17.8m @ 1.0g/t Au, 5.22g/t Ag from 110.2m

58m @ 1.07g/t Au, 5.27g/t Ag from 140m

35m @ 1.02g/t Au, 1.9g/t Ag from 304m

Also at Wafi, drilling at Miapilli to determine the extent and source of the porphyry mineralisation continued with 2 holes completed during the quarter.

#### **Golpu West**

Discovery drilling on the Golpu West prospect in PNG identified a new zone of high grade porphyry copper gold mineralisation adjacent to the existing Golpu resource. The intercepts include average gold and copper grades significantly higher than the Golpu resource.

The extent of the Golpu West mineralisation remains open and the existing resource is expected to grow significantly.

At Golpu, discovery drilling identified a new zone of high grade porphyry copper gold mineralisation west of the existing Golpu resource. Significant intercepts at Golpu West include:

– WR321: 331m @ 0.51g/t Au & 0.93% Cu from 694m including 155m @ 0.88g/t Au & 1.5% Cu from 868m

– WR327A: 478.4m @ 0.85g/t Au & 1.36% Cu from 506m including 155m @ 1.47g/t Au & 2.29% Cu from 691m

– WR328: 597m @ 0.57g/t Au & 0.96% Cu from 399m including 198m @ 1.13g/t Au & 1.88% Cu from 788m

The extent of Golpu West mineralisation remains open. Golpu West is located off the western margin of the Golpu orebody, outside of existing resource limits. Drilling to define the geometry and extent of mineralisation is ongoing.

Also at Golpu, drilling has commenced at Golpu Deeps to test the extent of the Golpu mineralisation at depth.

NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS  
FOR THE PERIOD ENDED 31 DECEMBER 2009

**1.**

**Accounting policies**

Basis of accounting

The condensed consolidated interim financial statements for the period ended 31 December 2009 have been prepared using accounting

policies that comply with International Financial Reporting Standards (IFRS), which are consistent with the accounting policies used in the

audited annual financial statements for the year ended 30 June 2009. These condensed consolidated interim financial statements are

prepared in accordance with IAS 34, Interim Financial Reporting, and in the manner required by the Companies Act of South Africa. They

should be read in conjunction with the annual financial statements for the year ended 30 June 2009.

<sup>1</sup> The comparative figures are re-presented due to Mount Magnet being reclassified as part of continuing operations. See note 3 in this regard.

\*The impairment recorded in the December 2009 quarter relates to Brand 3 and Evander 2 and 5, which have been placed on care and maintenance.

**3.**

**Disposal groups classified as held-for-sale and discontinued operations**

Following approval by the Board of Directors in April 2007, the assets and liabilities related to Mount Magnet ( an operation in Australia) were classified as held-for-sale. This operation also met the criteria to be classified as discontinued operations in terms of IFRS 5. During the June 2009 quarter, it was decided that further drilling at the site to define the orebody would enhance the selling potential of the operation. As a result, the operation no longer met the requirements of IFRS 5 to be classified as held-for-sale, and was therefore reclassified as continuing operations again. Consequently, the income statements and earnings per share amounts for all comparative periods have been re-presented taking this change into account.

**4.**

**Earnings/(loss) per ordinary share**

Earnings/(loss) per ordinary share is calculated on the weighted average number of ordinary shares in issue for the quarter ended 31 December 2009: 425.9 million (30 September 2009: 425.9 million, 31 December 2008: 406.8 million), and the six months ended 31 December 2009: 425.9 million (31 December 2008: 405.0 million) and the year ended 30 June 2009: 414.1 million. The fully diluted earnings/(loss) per ordinary share is calculated on weighted average number of diluted ordinary shares in issue for the quarter ended 31 December 2009: 427.5 million (30 September 2009: 427.2 million, 31 December 2008: 409.1 million), and the six months ended 31 December 2009: 427.4 million (31 December 2008: 407.1 million) and the year ended 30 June 2009: 416.0 million.

**5.**

**Inventories**

During the quarter ended 31 December 2009, the Group concluded two separate purchase agreements with Pamodzi Gold Free State (Proprietary) Limited (In Provisional Liquidation) (Pamodzi), for the purchase of a waste rock dump and a gold plant to the value of R120 million. The Group's intention is to break up the plant and extract the gold in lock-up. The portion of inventory that is expected to be recovered more than twelve months after balance sheet date has been classified as non-current.

**6.**

**Restricted cash**

The Group entered into two separate purchase agreements with Pamodzi for the purchase of Pamodzi's Free State North and South Assets for a total consideration of R280 million. The Group had an obligation in terms of the North and South agreements to pay, at the conclusion of the later of the waste rock dump and plant agreements, an amount equal to the purchase consideration into an escrow account as the North and South sale of assets agreements were not yet unconditional on 31 December 2009. The escrow account is an interest-bearing trust account on which the interest accrues to the benefit of the Group.

**Total borrowings**

(1) (2)

**1 025****368****362****2 859**

(1) On 11 December 2009, the Company entered into a loan facility with Nedbank Limited, comprising a Term Facility of R900 million and a

Revolving Credit Facility of R600 million. Interest accrues on a day-to-day basis over the term of the loan at a variable interest rate, which

is fixed for a three-month period, equal to JIBAR plus 3.5%. Interest is repayable quarterly.

The Term Facility is repayable bi-annually in equal instalments of R90 million over five years. The Revolving Credit Facility is repayable

after three years. The Group drew down R650 million of the Term Facility during December 2009.

(2) Included in the borrowings is R102 million (September 2009: 104 million; June 2009: R106 million; December 2008: R198 million) owed to

Westpac Bank Limited in terms of a finance lease agreement. The future minimum lease payments are as follows:

This expenditure will be financed from existing resources and borrowings where necessary.

**Contingent liability**

Class action.

On 18 April 2008, Harmony Gold Mining Company Limited was made aware that it has been named or may be named as a

defendant in a lawsuit filed in the U.S. District Court in the Southern District of New York on behalf of certain purchasers and sellers of

Harmony's American Depositary Receipts (ADRs) with regard to certain of its business practises. Harmony has retained legal counsel, who

advise Harmony on further developments in the U.S.

During January 2009, the plaintiff filed an Amended Complaint with the Court. Subsequently, the Company filed a Motion to Dismiss all claims asserted in the Class Action Case with the Court. The plaintiffs have filed an opposing response and the Company has since replied to that response. It is not possible to predict with certainty when the Court will rule on the Motion of Dismiss as the timing of the ruling is entirely within the discretion of the Court. It is currently not possible to estimate if there will be a financial effect, or what that effect might be.

Results for the second quarter and six months

**ended 31 December 2009**

**10. Subsequent events**

In January 2010, the sale of Big Bell Operations (Proprietary) Limited, an operation in Western Australia, was concluded, in which the Group

received an amount of AU\$3.0 million and the release on performance bonds of AU\$3.1 million.

**11. Segment report**

The segment report follows on page 25.

### **13. Review report**

The condensed consolidated financial statements for the six months ended 31 December 2009 on pages 16 to 26 have been reviewed

in accordance with International Standards on Review Engagements 2410 – “ Review of interim financial information performed by the

Independent Auditors of the entity ” by PricewaterhouseCoopers Inc. Their unqualified review report is available for inspection at the

Company’s registered office.

<sup>1</sup> The comparative figures are re-presented due to Mount Magnet being reclassified as part of continuing operations. The currency conversion average rates for the quarter ended: December 2009: US\$1 = R7.49 (September 2009: US\$1 = R7.78, December 2008:

US\$1 = R9.93)

The currency conversion average rates for the six months ended: December 2009: US\$1 = R7.63 (December 2008: US\$1 = R8.84)

The income statement for the year ended 30 June 2009 has been extracted from the 2009 Annual Report.

**Note on convenience translations**

Except where specific statements have been extracted from the 2009 Annual Report, the requirements of IAS 21, The Effects of the Changes in

Foreign Exchange Rates, have not necessarily been applied in the translation of the US Dollar financial statements

presented on page 30 to 36.

**Notes:**

(1) Includes Kalgold, Phoenix and Dumps.

(2) Production statistics for Hidden Valley are shown for information purposes. The mine is in a build-up phase and revenue and cost are currently capitalised until commercial levels of production are reached.

All income statement items, including capital expenditure, are converted at the currency conversion rate of US\$1 = R7.63.

Mining assets are converted at the currency conversion rate of US\$1 = R7.37.
