FORWARD-LOOKING STATEMENTS

The Private Securities Litigation Reform Act of 1995 evidences Congress' determination that the disclosure of forward-looking information is desirable for investors and encourages such disclosure by providing a safe harbor for forward-looking statements by corporate management. This Form 10-Q, including Management's Discussion and Analysis of Financial Condition and Results of Operations, contains forward-looking statements that involve risk and uncertainty. "Forward-looking statements" are easily identified by the use of words such as "could," "anticipate," "estimate," "believe," "confident," and similar words that refer to a future outlook. To comply with the terms of the safe harbor, the company notes that a variety of factors could cause the company's actual results and experiences to differ materially from the anticipated results or other expectations expressed in the company's forward-looking statements.

The risks and uncertainties that may affect the operations, performance, development and results of the company's business include, but are not limited to, the growth of the economy, unemployment, pricing in the real estate market, interest rate movements, the impact of competitive products, services and pricing, customer business requirements, the current economic environment posing significant challenges and affecting our financial condition and results of operations, the possibility of future FDIC assessments, Congressional legislation and similar matters

(including changes as a result of rules and regulations adopted under the Dodd-Frank Wall Street Reform and Consumer Protection Act). We caution readers of this report not to place undue reliance on forward-looking statements which are subject to influence by unanticipated future events. Actual results, accordingly, may differ materially from management expectations.

POTOMAC BANCSHARES, INC. AND SUBSIDIARY NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

1. In the opinion of management, the accompanying financial statements contain all adjustments (consisting of only normal recurring accruals) necessary to present fairly the financial position as of March 31, 2011 and December 31, 2010, and the results of operations, cash flows and statements of changes in stockholders' equity for the three months ended March 31, 2011 and 2010. The statements should be read in conjunction with Notes to Consolidated Financial Statements included in the Potomac Bancshares, Inc. annual report for the year ended December 31, 2010. The results of operations for the three month periods ended March 31, 2011 and 2010 are not necessarily indicative of the results to be expected for the full year.

The consolidated financial statements of Potomac Bancshares, Inc. (the "company") and its wholly-owned subsidiary, Bank of Charles Town (the "bank"), include the accounts of both companies. All material inter-company balances and transactions have been eliminated in consolidation.

Certain reclassifications have been made to prior period amounts to conform to the current year presentation.

In preparing these financial statements, the company has evaluated events and transactions for potential recognition or disclosure through the date the financial statements were issued.

2. Stock-Based Compensation

The 2003 Stock Incentive Plan was approved by stockholders on May 13, 2003, which authorized up to 183,600 shares of common stock to be used in the granting of incentive options to employees and directors. On April 24, 2007, the stockholders approved an additional 250,000 shares of common stock to be used in the granting of incentive options to employees and directors. This is the first and only stock incentive plan adopted by the company. Under the plan, the option price cannot be less than the fair market value of the stock on the date granted. An option's maximum term is ten years from the date of grant. Employee options granted under the plan are subject to a five year vesting schedule. Director options immediately vest.

Incremental stock-based compensation expense recognized for the three month periods ending March 31, 2011 and 2010 was \$4 thousand and \$8 thousand, respectively.

Stock option compensation expense is the estimated fair value of options granted amortized on a straight-line basis over the requisite service period for each separately vesting portion of the award. Fair value is estimated using the Black-Scholes option-pricing model. There were no options granted during the first quarters of 2011 and 2010.

Stock option plan activity for the three months ended March 31, 2011 is summarized below:

			Weighted	
			Average	
		Weighted	Remaining	
		Average	Contractual	Aggregate
		Exercise	Life	Intrinsic
	Shares	Price	(in years)	Value
Options outstanding, January 1, 2011	120 974	\$ 14.76		
Granted				
Exercised				
Canceled or expired				
Options outstanding, March 31, 2011	120 974	14.76	4	\$
Options exercisable, March 31, 2011	116 896	14.73	4	\$

The aggregate intrinsic value of a stock option in the table above represents the total pre-tax intrinsic value (the amount by which the current market value of the underlying stock exceeds the exercise price of the option) that would have been received by the option holders had all option holders exercised their options on March 31, 2011. The aggregate intrinsic values change based on changes in the market value of the company's

stock.

As of March 31, 2011 there was \$12 thousand of total unrecognized compensation expense related to nonvested stock options, which will be recognized over the remaining requisite service period.

7

Securities

The amortized cost and fair value of securities available for sale as of March 31, 2011 and December 31, 2010 (in thousands) are as follows:

	\$	42 844	\$	312	\$	(466)	\$	42 690

The primary purpose of the investment portfolio is to generate income and meet liquidity needs of the company through readily saleable financial instruments. The portfolio is made up of fixed rate bonds, whose prices move inversely with rates. At the end of any accounting period, the investment portfolio has unrealized gains and losses. The company monitors the portfolio, which is subject to liquidity needs, market rate changes and credit risk changes, to see if adjustments are needed. The primary concern in a loss situation is the credit quality of the business behind the instrument. The primary cause of impairments is the decline in the prices of the bonds as rates have risen. There are 13 accounts in the consolidated portfolio that have losses at March 31, 2011. The primary cause of the temporary impairments in the company's investments in debt securities was fluctuations in interest rates. Because the company intends to hold these investments in debt securities to maturity and it is more likely than not that the company will not be required to sell these investments before a recovery of unrealized losses, the company does not consider these investments to be other-than-temporarily impaired at March 31, 2011 and no impairment has been recognized.

There are two equity security investments in the company's portfolio with losses at March 31, 2011. Because the company has the ability and intent to hold these equity investments until the investments recover their unrealized losses, the company considers these investments to be temporarily impaired at March 31, 2011 and is recognizing no impairment. These are community bank stock related holdings.

The following table summarizes the fair value and gross unrealized losses for securities aggregated by investment category and length of time that individual securities have been in a continuous gross unrealized loss position as of March 31, 2011 and December 31, 2010 (in thousands).

The company's investment in Federal Home Loan Bank (FHLB) stock totaled \$726 thousand at March 31, 2011. FHLB stock is generally viewed as a long-term investment and as a restricted investment security, which is carried at cost, because there is no market for the stock, other than the FHLBs or member institutions. Therefore, when evaluating FHLB stock for impairment, its value is based on the ultimate recoverability of the par value rather than by recognizing temporary declines in value. Despite the FHLB's temporary suspension of repurchases of excess capital stock on a regular basis, the company does not consider this investment to be other-than-temporarily impaired at March 31, 2011 and no impairment has been recognized. FHLB stock is shown as a separate line item on the balance sheet and is not a part of the available for sale securities portfolio.

4. Loans

5. Allowance for Loan Losses (Continued)

Recorded reserves for impaired loans total \$2.8 million compared to total nonaccrual loans of \$2.7 million. There are loans with impairment that are not on nonaccrual status because payments on these loans are current. These loans are kept under constant scrutiny by the loan officers and credit administration.

5. Allowance for Loan Losses (Continued)

The past due policy of the bank is to report all classes of loans past due in the following categories:

- 30 to 59 days past due (principal or interest) still accruing interest
- 60 to 89 days past due (principal or interest) still accruing interest
- 90 days or more past due (principal or interest) still accruing interest
- Nonaccrual status.

6. Employee Benefit Plans

Components of net periodic benefit cost for the pension and postretirement benefit plans are shown below:

		on Benefits Months End	ed		Bene	r Postretin fits e Months		
	Marcl 2011	h 31	Marc 2010		Marc 2011		Marc 2010	
	(in the	ousands)			(in the	ousands)		
Components of Net Periodic Benefit Cost								
Service cost	\$		\$		\$	3	\$	3
Interest cost		100		103		9		9
Expected return on plan assets		(119)		(115)				
Amortization of net obligation at transition						5		4
Recognized net actuarial loss		38		24				
Net periodic benefit cost	\$	19	\$	12	\$	17	\$	16

Employer Contribution

The company anticipates the 2011 contribution for the pension plan will approximate \$10 thousand. The company has made payments of \$10 thousand as of March 31, 2011. The company has made payments of \$5 thousand for the other postretirement benefit plans for the first three months of 2011 and anticipates remaining payments for 2011 to total \$15 thousand.

7. Weighted Average Number of Shares Outstanding and Earnings Per Share

The following shows the weighted average number of shares used in computing earnings per share and the effect on weighted average number of shares of diluted potential common stock. Potential diluted common stock had no effect on March 31, 2011 and March 31, 2010 earnings per share.

	Three Months Ended	l		Three Months Ende	1	
	March 31, 2011			March 31, 2010		
	Average Shares		Share ount	Average Shares	Per S Amo	
Basic earnings per share	3 390 178	\$.08	3 390 178	\$.12
Effect of dilutive securities:						
Stock options						
Diluted earnings per share	3 390 178	\$.08	3 390 178	\$.12

For the quarter ended March 31, 2011, stock options representing 120,974 average shares, and for the quarter ended March 31, 2010, stock options representing 126,224 average shares were not included in the calculation of earnings per share as their effect would have been anti-dilutive.

8. Recent Accounting Pronouncements

In January 2010, the Financial Accounting Standards Board (FASB) issued ASU 2010-06, "Fair Value Measurements and Disclosures (Topic 820): Improving Disclosures about Fair Value Measurements." ASU 2010-06 amends Subtopic 820-10 to clarify existing disclosures, require new disclosures, and includes conforming amendments to guidance on employers' disclosures about postretirement benefit plan assets. ASU 2010-06 is effective for interim and annual periods beginning after December 15, 2009, except for disclosures about purchases, sales, issuances, and settlements in the roll forward of activity in Level 3 fair value measurements. Those disclosures are effective for fiscal years beginning after December 15, 2010 and for interim periods within those fiscal years. The adoption of the new guidance did not have a material impact on the company's consolidated financial statements.

In July 2010, the FASB issued ASU 2010-20, "Disclosures about the Credit Quality of Financing Receivables and the Allowance for Credit Losses." The new disclosure guidance significantly expands the existing requirements and will lead to greater transparency into a company's exposure to credit losses from lending arrangements. The extensive new disclosures of information as of the end of a reporting period became effective for both interim and annual reporting periods ending on or after December 15, 2010. Specific disclosures regarding activity that occurred before the issuance of the ASU, such as the allowance roll forward and modification disclosures, will be required for periods beginning on or after December 15, 2010. The company has included the required disclosures in its consolidated financial statements.

The Securities Exchange Commission (SEC) has issued Final Rule No. 33-9002, "Interactive Data to Improve Financial Reporting", which requires companies to submit financial statements in XBRL (extensible business reporting language) format with their SEC filings on a phased-in schedule. Large accelerated filers and foreign large accelerated filers using U.S. GAAP were required to provide interactive data reports starting with their first quarterly report for fiscal periods ending on or after June 15, 2010. All remaining filers are required to provide interactive data reports starting with their first quarterly report for fiscal periods ending on or after June 15, 2011.

In March 2011, the SEC issued Staff Accounting Bulletin (SAB) 114. This SAB revises or rescinds portions of the interpretive guidance included in the codification of the Staff Accounting Bulletin Series. This update is intended to make the relevant interpretive guidance consistent with current authoritative accounting guidance issued as a part of the FASB's Codification. The principal changes involve revision or removal of accounting guidance references and other conforming changes to ensure consistency of referencing through the SAB Series. The effective date for SAB 114 is March 28, 2011. The adoption of the new guidance did not have a material impact on the company's consolidated financial statements.

In April 2011, the FASB issued ASU 2011-02, "A Creditor's Determination of Whether a Restructuring Is a Troubled Debt Restructuring." The amendments in this ASU clarify the guidance on a creditor's evaluation of whether it has granted a concession to a debtor. They also clarify the guidance on a creditor's evaluation of whether a debtor is experiencing financial difficulty. The amendments in this Update are effective for the first interim or annual period beginning on or after June 15, 2011. Early adoption is permitted. Retrospective application to the beginning of the annual period of adoption for modifications occurring on or after the beginning of the annual adoption period is required. As a result of applying these amendments, an entity may identify receivables that are newly considered to be impaired. For purposes of measuring impairment of those receivables, an entity should apply the amendments prospectively for the first interim or annual period beginning on or after June 15, 2011. The company is currently assessing the impact that ASU 2011-02 will have on its consolidated financial statements.

9. Fair Value Measurements

Determination of Fair Value

The company uses fair value measurements to record fair value adjustments for certain assets and to determine fair value disclosures. In accordance with the Fair Value Measurements and Disclosures topic of FASB ASC, the fair value of a financial instrument is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. Fair value is best determined based upon quoted market prices. However, in many instances, there are no quoted market prices for the company's various financial instruments. In cases where quoted market prices are not available, fair values are based on estimates using present value or other valuation techniques. Those techniques are significantly affected by the assumptions used, including the discount rate and estimates of future cash flows. Accordingly, the fair value estimates may not be realized in an immediate settlement of the instrument.

9. Fair Value Measurements (Continued)

The recent fair value guidance provides a consistent definition of fair value, which focuses on exit price in an orderly transaction (that is, not a forced liquidation or distressed sale) between market participants at the measurement date under current market conditions. If there has been a significant decrease in the volume and level of activity for the asset or liability, a change in valuation technique or the use of multiple valuation techniques may be appropriate. In such instances, determining the price at which willing market participants would transact at the measurement date under current market conditions depends on the facts and circumstances and requires the use of significant judgment. The fair value is a reasonable point within the range that is most representative of fair value under current market conditions.

Fair Value Hierarchy

In accordance with this guidance, the company groups its financial assets and financial liabilities generally measured at fair value in three levels, based on the markets in which the assets and liabilities are traded and the reliability of the assumptions used to determine fair value.

Level 1—Valuation is based on quoted prices in active markets for identical assets or liabilities that the reporting entity has the ability to access at the measurement date. Level 1 assets and liabilities generally include debt and equity securities that are traded in an active exchange market. Valuations are obtained from readily available pricing sources for market transactions involving identical assets or liabilities.

Level 2—Valuation is based on inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly or indirectly. The valuation may be based on quoted prices for similar assets or liabilities; quoted prices in markets that are not active; or other inputs that are observable or can be corroborated by observable market data for substantially the full term of the asset or liability.

Level 3—Valuation is based on unobservable inputs that are supported by little or no market activity and that are significant to the fair value of the assets or liabilities. Level 3 assets and liabilities include financial instruments whose value is determined using pricing models, discounted cash flow methodologies, or similar techniques, as well as instruments for which determination of fair value requires significant management judgment or estimation.

A financial instrument's categorization within the valuation hierarchy is based upon the lowest level of input that is significant to the fair value measurement.

The following methods and assumptions were used by the company in estimating fair value disclosures for financial instruments:

Cash and Short-Term Investments

The carrying amounts of cash and short-term instruments approximate fair values based on the short-term nature of the assets.

Securities

Securities available for sale are recorded at fair value on a recurring basis. Fair value measurement is based upon quoted market prices, when available (Level 1). If quoted market prices are not available, fair values are measured utilizing independent valuation techniques of identical or similar securities for which significant assumptions are derived primarily from or corroborated by observable market data. Third party vendors compile prices from various sources and may determine the fair value of identical or similar securities by using pricing models that consider observable market data (Level 2).

Loans

For variable rate loans that reprice frequently and with no significant change in credit risk, fair values are based on carrying values. Fair values for other loans were estimated using discounted cash flow analyses, using interest rates currently being offered.

FHLB Stock

The carrying amounts of FHLB stock approximate fair value based on redemption provisions of the FHLB.

9. Fair Value Measurements (Continued)

Bank Owned Life Insurance (BOLI)

The carrying amounts of BOLI approximate fair value.

Deposit Liabilities

The fair value of demand deposits, savings accounts, and certain money market deposits is the amount payable on demand at the reporting date. The fair value of fixed-maturity fixed rate certificates of deposit is estimated using the rates currently offered for deposits of similar remaining maturities.

Short-Term Borrowings

The carrying amounts of borrowings under repurchase agreements and federal funds purchased approximate fair value.

FHLB Advances

The fair values of the company's FHLB advances are estimated using discounted cash flow analysis based on the company's incremental borrowing rates for similar types of borrowing arrangements.

Accrued Interest

The carrying amounts of accrued interest approximate fair value.

Off-Balance Sheet Financial Instruments

The fair value of commitments is estimated using the fees currently charged to enter into similar agreements, taking into account the remaining terms of the agreements and the present creditworthiness of the counterparties. For fixed-rate loan commitments, fair value also considers the difference between current levels of interest rates and the committed rates. The fair value of letters of credit is based on fees currently charged for similar agreements or on the estimated cost to terminate them or otherwise settle the obligations with the counterparties at the reporting date.

At March 31, 2011 and December 31, 2010, the fair value of loan commitments and standby-letters of credit was immaterial. Therefore, they have not been included in the following table.

The carrying amounts and estimated fair values of the company's financial instruments are as follows:

	Mar	ch 31, 2011			Dec	ember 31, 20	010

Assets and Liabilities Measured at Fair Value on a Nonrecurring Basis

Certain assets are measured at fair value on a nonrecurring basis in accordance with generally accepted accounting principles. Adjustments to the fair value of these assets usually result from the application of lower-of-cost-or-market accounting or write-downs of individual assets.

9. Fair Value Measurements (Continued)

The following describes the valuation techniques used by the company to measure certain assets recorded at fair value on a nonrecurring basis in the financial statements:

Loans held for sale: Loans held for sale are carried at the lower of cost or market value. These loans currently consist of one-to-four family residential loans originated for sale in the secondary market. Fair value is based on the price secondary markets are currently offering for similar loans using observable market data which is not materially different than cost due to the short duration between origination and sale (Level 2). As such, the company records any fair value adjustments on a nonrecurring basis. No nonrecurring fair value adjustments were recorded on loans held for sale during the periods ended March 31, 2011 and December 31, 2010. Gains and losses on the sale of loans are recorded within other operating income on the consolidated statements of income.

Impaired Loans: Loans are designated as impaired when, in the judgment of management based on current information and events, it is likely that some amounts due according to the contractual terms of the loan agreement may not be collected. The measurement of loss associated with impaired loans can be based on either the observable market price of the loan or the fair value of the collateral. Fair value is measured based on the value of the collateral securing the loans. Collateral may be in the form of real estate or business assets including equipment, inventory, and accounts receivable. The vast majority of the collateral is real estate. The value of real estate collateral is determined utilizing an income or market valuation approach based on an appraisal conducted by an independent, licensed appraiser outside of the company using observable market data (Level 2). However, if the collateral is a house or building in the process of construction or if an appraisal of the real estate property is over two years old, then the fair value is considered Level 3. The value of business equipment is based upon an outside appraisal if deemed significant, or the net book value on the applicable business' financial statements if not considered significant using observable market data. Likewise, values for inventory and accounts receivable are based on financial statement balances or aging reports (Level 3). Impaired loans allocated to the Allowance for Loan Losses are measured at fair value on a nonrecurring basis. Any fair value adjustments are recorded in the period incurred as provision for loan losses on the consolidated statements of income.

Other Real Estate Owned: Certain assets such as other real estate owned (OREO) are measured at fair value less cost to sell. The value of real estate collateral is determined utilizing an income or market valuation approach based on an appraisal conducted by an independent, licensed appraiser outside of the company using observable market data (Level 2). However, if the collateral is a house or building in the process of construction or if an appraisal of the real estate property is over two years old, then the fair value is considered Level 3.

The following table summarizes the company's financial assets that were measured at fair value (in thousands) on a nonrecurring basis as of March 31, 2011 and December 31, 2010.

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

CRITICAL ACCOUNTING POLICIES

General

The company's financial statements are prepared in accordance with accounting principles generally accepted in the United States of America (GAAP). The financial information contained within our statements is, to a significant extent, financial information that is based on measures of the financial effects of transactions and events that have already occurred. A variety of factors could affect the ultimate value that is obtained either when earning income, recognizing an expense, recovering an asset or relieving a liability. We use historical loss factors as one factor in determining the inherent loss that may be present in our loan portfolio. Actual losses could differ significantly from the historical factors that we use. In addition, GAAP itself may change from one previously acceptable method to another method. Although the economics of our transactions would be the same, the timing of events that would impact our transactions could change.

Allowance for Loan Losses

The allowance for loan losses is an estimate of the losses that may be sustained in our loan portfolio. The allowance is based on two basic principles of accounting: (1) losses be accrued when they are probable of occurring and are capable of estimation and (2) losses be accrued based on the differences between the value of collateral, present value of future cash flows or values that are observable in the secondary market and the loan balance.

The allowance consists of specific, general and unallocated components. The specific component relates to loans that are classified as doubtful or substandard. For such loans that are also classified as impaired, an allowance is established when the discounted cash flows (or collateral value or observable market price) of the impaired loan is lower than the carrying value of that loan. The general component covers non-classified loans and is based on historical loss experience adjusted for qualitative factors. An unallocated component is maintained to cover uncertainties that could affect management's estimate of probable losses. The unallocated component of the allowance reflects that margin of imprecision inherent in the underlying assumptions used in the methodologies for estimating specific and general losses in the portfolio.

FINANCIAL OVERVIEW

If the first quarter is any indication, 2011 is shaping up to be a challenging year for the industry and the bank. Lenders are finding loan demand to be somewhat stagnant. Interest bearing deposits have had unexpected growth which has had a negative impact on earnings. Management has counteracted the trend by substantially lowering deposit rates and modifying terms of the Smart Checking account. The excess funds have been predominantly put into investment securities in an attempt to improve returns until loan demand improves.

On a more positive note, there are some indications of potential growth. Several commercial projects are under way within our primary banking area. This brings the potential for job creation and an improving overall local economy. We are very hopeful that the start of growth will continue toward a more "normal" local economy in the near future. Growth in deposits has increased liquidity and put us in a great position to meet loan demand when it begins to increase.

Total assets have increased \$14.6 million or 4.9% from the December 31, 2010 total of \$297.6 million to \$312.2 million at March 31, 2011. Interest bearing deposits in other financial institutions increased approximately \$11.1 million. Securities have increased approximately \$10.1 million. The increase in cash is primarily due to an increase in deposits. The security increase was the result of replacing securities that had matured or been called in the first quarter of 2011 and adding additional securities to provide a return on the excess funds currently on deposit. Loans have decreased approximately \$6.5 million from the December 31, 2010 total of \$214.2 million to \$207.7 million at March 31, 2011. The loan decrease can be attributed to minimal loan demand, the pay down of existing loans, loan charge-offs and the transfer of loans to OREO.

Total deposits have increased \$15.1 million or 5.9% at March 31, 2011 compared to December 31, 2010. Noninterest-bearing deposits have increased 0.9% and interest-bearing deposits have increased 6.4% during the first quarter of 2011. The increase in deposits is the result of a combination of circumstances including, management believes, customers saving more. Other liabilities decreased 3.39%.

The March 31, 2011 annualized return on average assets is .34% compared to .59% at December 31, 2010. At March 31, 2011 the annualized return on average equity is 3.79% compared to 6.70% at December 31, 2010. The Tier 1 capital to average assets ratio (leverage capital ratio) is 9.02% at March 31, 2011 compared to 9.36% at December 31, 2010. The Tier 1 capital to total risk weighted assets ratio is 12.88% at March 31, 2011 compared to 12.97% at December 31, 2010. The total capital to risk weighted assets ratio is 14.14% at March 31, 2011 compared to 14.24% at December 31, 2010. All capital ratios are within the regulatory guidelines.

			Mi	nimum	
			Ca	pital	
	Actual		Re	quirement	
	Amount	Ratio	An	nount	Ratio
Total capital to risk weighted assets	\$ 300	086 14.14%	\$	17 022	8.00%
Tier 1 capital to risk weighted assets	\$ 27	12.88%	\$	8 511	4.00%
Tier 1 capital to average assets	\$ 274	9.02%	\$	12 152	4.00%

The following table is an analysis of the company's allowance for loan losses with amounts shown in thousands. Management monitors the loan portfolio on a continual basis with procedures that allow for problem loans and potentially problem loans to be highlighted and watched. Written reports are prepared on a monthly basis for all loans including commercial loans graded below a certain level and are reported to the Board of Directors on a monthly basis. Based on experience, these loan policies and the bank's grading and review system, management believes the loan loss allowance is adequate.

	March 2011	. 31	Decen 2010	nber 31	March 2010	31

loans outstanding during the period		.27%		1.01%		.31%

As a result of the regular loan reviews by management, the reserve decreased when comparing data as of March 31, 2011 to March 31, 2010. This is reflected in the allowance for loan loss to period end loans ratios for these same quarter ends. The decrease over the previous year represents management's assessment of the bank's loan portfolio that has been affected by the poor economic conditions. Most of the loans foreclosed upon or currently in nonaccrual status are related to the real estate industry. In comparing data for the loan loss reserve for the March 31, 2011 quarter end to December 31, 2010 information, the reserve has decreased. This represents the gradual improvement in the status of problem assets as management continues to review these assets on a regular basis.

Loans are placed on nonaccrual status when principal or interest is delinquent for 90 days or more. Interest income generally is not recognized on specific impaired loans unless the likelihood of further loss is remote. Interest income on other nonaccrual loans is recognized only to the extent of interest payments received. The majority of the current nonaccrual loans as shown in the chart below are in the process of collection. Following is a table showing the risk elements in the loan portfolio with amounts in thousands.

	Ma	rch 31	Dec	ember 31	Ma	rch 31
	201	1	2010)	201	0

Loans past due 90 days accruing interest	\$	276	\$		\$	
Allowance for loan losses to period end loans		2.28%		2.29%		2.28%
Nonperforming assets to period end loans and						
foreclosed properties		4.40%		3.90%		3.77%

At March 31, 2011, other potential problem loans total \$2.3 million. Loans are viewed as potential problem loans according to the ability of such borrowers to comply with current repayment terms. These loans are subject to constant management attention, and their status is reviewed on a regular basis.

The details of the income statements for the three months ended March 31, 2011 and 2010 are highlighted below.

Ø Net income in 2011 is 39.1% less than the 2010 net income. This is predominantly the result of changes in the loan and deposit portfolios. The loan portfolio has decreased and the total deposits, including interest bearing deposits, have increased.

Ø At March 31, 2011, total interest and dividend income is down 8.6% compared to March 31, 2010. Although loan yields have remained relatively stable over the past year, the loan portfolio has decreased. The reduction in income is created by the smaller amount of loans from which to collect interest.

Ø At March 31, 2011, interest expense was 19.1% below 2010 expense for the same time period. The decrease in expense is primarily due to a reduction in interest rates since interest bearing deposit balances actually increased. The lower overall average balance in daily cash management accounts and a lower balance on the FHLB advance due to the continued pay down of the advance contributed to the decrease in interest expense.

Ø Net interest margin at March 31, 2011 is 3.44%, down from the December 31, 2010 figure of 3.56% and March 31, 2010 figure of 3.47%. During the first three months of 2011, the overall average rate on loans dropped slightly from 5.70% at December 31, 2010 to 5.64% at March 31, 2011. The overall rate on loans at March 31, 2010 was 5.74%. During this same period the overall average rate being paid on deposits decreased to 1.53% from 1.68% at December 31, 2010 and 1.81% at March 31, 2010.

Noninterest income decreased 9.9% for the three months ended March 31, 2011 compared to March 31, 2010. Some significant income items are listed here.

Ø At March 31, 2011 there is an overall loss on sale of OREO compared to an overall gain at March 31, 2010. This results in a decrease of 124.1% in the gain or loss on sale of OREO account.

Ø Visa and Mastercard fees have increased 15.2%. The increase is believed to be an overall increase in consumer spending and the likelihood that consumers continue to get more comfortable with using credit/debit cards versus cash.

Ø Other non interest income has decreased 11.9%. The significant factor contributing to this drop is the reduction in rental income on other real estate. Two properties, a home and set of storage units, that were being rented during the first quarter of 2010 were sold later in 2010 reducing rental income.

Noninterest expense increased about .64% for the three months ended March 31, 2011 compared to the same period in 2010. Some details are listed below.

Ø Occupancy expense has decreased 10.0%. The biggest contributing factor was the 47.1% decrease in grounds maintenance during the first quarter of 2011. Normally grounds maintenance is higher during this time period due to the extra expense associated with winter weather. The 2011 winter was somewhat mild compared to the record snowfall of February 2010, thus the costs associated with handling

the weather was reduced.

Ø Foreclosed property expense has decreased 37.6% compared to the first quarter of 2010. The decrease is two fold. The latest properties foreclosed upon have been in better shape and/or a finished product. Many of the properties in the other real estate portfolio are land with no structures to maintain or improve for selling purposes.

Ø ATM and check card expenses have increased 10.9% in the first three months of 2011 compared to the same time period in 2010. The increase is due to increased usage by customers.

Ø The FDIC assessment has increased 27.5% in the first quarter of 2011 as compared to the same quarter in 2010. The increase is due to the increase in deposits.

Ø Other noninterest expenses have increased 12.6% at March 31, 2011 compared to March 31, 2010. The significant contributing factors are outlined below.

- Other professional fees increased due to timing differences of bill payments and to the use of a consultant to assess the Small Business Lending Fund program.
- Postage has increased primarily due to the timing differences of payments.
- Printing, stationery and supplies expense increased 18.6%. The increase is due to timing differences of payments and to some additional costs related to the outsourced printing of statements.

LIQUIDITY

Liquidity is a measure of the Bank's ability to respond to sudden changes in funding needs or funding sources. Examples of sudden changes could involve a sudden increase in loan demand, a funding need, or it might involve a large decrease in deposited funds, a funding source. The role of cash management is to manage assets and liabilities so that the Bank can respond to such fluctuations in sources and uses of cash. Management spends much of its time assessing our liquidity position.

Management is informed of the liquidity information via reports and committee discussion. The president is provided a weekly "dashboard" report of our liquidity information. The Asset/Liability Committee reviews and discusses our liquidity position on a quarterly basis. The committee has set a benchmark minimum liquidity ratio of 15%. Management has recently worked on a strategy to free up some pledged assets for liquidity purposes.

Public funds are required to have collateral pledged against their balances above the FDIC insurance limits. Generally the bank has pledged securities or obtained letters of credit from the Federal Home Loan Bank of Pittsburgh to cover public funds. Two additional strategies to cover these funds are being considered. In the case of public funds in the form of CDs, the bank plans to aid customers in utilizing the CDARS network to insure their funds. We are also exploring the use of the Insured Cash Sweep (ICS) product to secure public funds. Both of the programs provide complete coverage through FDIC insurance. Most importantly, the securities that had been pledged against the public funds can be used as a source of cash if the need would arise. The securities are effectively converted from a non liquid asset to a liquid asset.

Liquid assets of the company include cash and due from banks, securities purchased under agreements to resell, federal funds sold, securities available for sale, and loans and investments maturing within one year. The company's statement of cash flows details this liquidity since January 1, 2011.

Operating Activities. The company's net income usually provides cash from the bank's operating activities. The net income figure is adjusted for certain noncash transactions such as depreciation expense that reduces net income but does not require a cash outlay. During 2011, the net income as adjusted has provided cash of \$1.0 million. Interest income earned on loans and investment securities is the company's major income source.

Investing Activities. Customer core deposits and company noncore funding provide the funds used to invest in loans and investment securities. In addition, the principal portion of loan payments, loan payoffs and maturity of investment securities provide cash flow. Purchases of bank premises and equipment are an investing activity. As mentioned in the section on deposits, we have taken advantage of our noncore funding capabilities since deposit growth is not always sufficient. The net amount of cash used in investing activities in 2011 is \$4.3 million.

Financing Activities. Customer core deposits and company noncore funding provide the financing for the investing activities as stated above. If the company has an excess of funds on any given day, the bank will sell these funds to make additional interest income to fund activities. Likewise, if the company has a shortage of funds on any given day it will purchase funds and pay interest for the use of these funds. Financing activities also include payment of dividends to shareholders, purchase of shares of the company's common stock for the treasury and repayment of any noncore funding. The net amount of cash provided by financing activities in 2010 is \$14.4 million.

At March 31, 2011, cash and due from banks, interest-bearing deposits in financial institutions, securities purchased under agreements to resell, federal funds sold and loans and securities maturing within one year were \$51.6 million.

Noncore funding capabilities, including borrowing, provide additional liquidity. The subsidiary bank maintains a federal funds line with one financial institution and is a member of the Federal Home Loan Bank of Pittsburgh. In March 2010, the subsidiary bank modified a \$3 million borrowing amortizing over three years from the Federal Home Loan Bank. In July 2009 the subsidiary bank secured a credit line with the Federal Reserve discount window. At March 31, 2011, the subsidiary bank has total credit available through these institutions of approximately \$28.4 million.

ANALYSIS OF CAPITAL

The adequacy of the company's capital is reviewed by management on an ongoing basis in terms of the size, composition, and quality of the company's asset and liability levels, and consistency with regulatory requirements and industry standards. Management seeks to maintain a capital structure that will assure an adequate level of capital to support anticipated asset growth and absorb potential losses.

The Federal Reserve, the Comptroller of the Currency and the Federal Deposit Insurance Corporation have adopted capital guidelines to supplement the existing definitions of capital for regulatory purposes and to establish minimum capital standards. Specifically, the guidelines categorize assets and off-balance sheet items into four risk-weighted categories. The minimum ratio of qualifying total capital to risk-weighted assets is 8.0%, of which at least 4.0% must be tier 1 capital, composed of common equity, retained earnings and a limited amount of perpetual preferred stock, less certain goodwill items. The company had a ratio of total capital to risk-weighted assets of 14.14% and a ratio of tier 1 capital to risk-weighted assets of 12.88% at March 31, 2011. Both ratios exceed the capital requirements adopted by the federal regulatory agencies.

Item 4. Controls and Procedures

Under the supervision and with the participation of our management, including our principal executive officer and principal financial officer, we have evaluated the effectiveness of the design and operation of our disclosure controls and procedures as of the date of this quarterly report. Based on that evaluation, our principal executive officer and principal financial officer have concluded that these controls and procedures are effective. There were no significant changes in our internal controls or in other factors that could significantly affect these controls subsequent to the date of their evaluation.

Disclosure controls and procedures are our controls and other procedures that are designed to ensure that information required to be disclosed by us in the reports that we file or submit under the Exchange Act is accumulated and communicated to our management, including our principal executive officer and principal financial officer, as appropriate, to allow timely decisions regarding required disclosure.

PART II. OTHER INFORMATION

Item 1. Legal Proceedings.

There are no material legal proceedings to which the Registrant or its subsidiary, directors or officers is a party or by which they, or any of them, are threatened. All legal proceedings presently pending or threatened against Potomac Bancshares, Inc. and its subsidiary involve routine litigation incidental to the business of the company or the subsidiary and are either not material in respect to the amount in controversy or fully covered by insurance.

26

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds.

On February 12, 2002, the company's Board of Directors originally authorized the repurchase program. The program authorized the repurchase of up to 10% of the company's stock over the next twelve months. The stock may be purchased in the open market and/or in privately negotiated transactions as management and the board of directors determine prudent. The program has been extended on annual basis at Potomac's reorganization meeting.
