Yields Climb Back to 20.0 Cents (R\$) in October

Yield recovery is in line with the Company's expectations

São Paulo, November 10, 2011 – GOL Linhas Aéreas Inteligentes S.A. (BM&FBovespa: GOLL4 and NYSE: GOL), (S&P/Fitch: BB-/BB-, Moody's: B1), the largest low-cost and low-fare airline in Latin America, **recorded year-on-year demand growth of 3.5% with a load factor of 65.2% in the domestic market.**

Demand

GOL's domestic demand grew by 3.5% over October 2010. The smaller increase in domestic demand was due to the 7.0% upturn in average yields between the periods, in an upward trend seen since the end of August, when the Company began to focus more strongly on fare recovery. In addition, the fact that the October 12 holiday fell on a Wednesday, not allowing for an extended weekend as it did in 2010, contributed to the smaller growth in domestic traffic.

In comparison with the previous month, demand fell by 3.1%, chiefly due to the higher average yield on GOL's route network.

Demand on the Company's international route network fell by 15.8% year-on-year, due to: (i) the return of three B767 aircraft that had been chartered out for international flights; (ii) the discontinuation of flights to Bogotá, in Colombia; and (iii) the 4.5% depreciation of the Real against the dollar. In comparison with September, international demand remained virtually flat, increasing by only 0.4%.

Supply

Total supply increased by 9.7% year-on-year, chiefly due to the high fleet productivity, (13,2 block-hours per day in October 2011, versus 12,9 block-hours per day in October 2010), combined with: (i) the new Fortaleza/Rio Branco route, linking cities in the North and Northeast; (ii) a new flight between Porto Alegre and Santiago; and (iii) two new, regular flights to Punta Cana in the Caribbean.

In comparison with September, supply grew by 3.5%, mainly due to the higher number of operational days in October. In 2012, GOL will continue to adopt a conservative approach towards adding capacity, and expects an increase of no more than 4% in its domestic supply.

Load Factor and Yields

GOL's total load factor came to 65.2%, 5.2 p.p. down year-on-year and 4.3 p.p. less than in the previous month, reflecting the Company's yield recovery process for the coming months. GOL's yields stood between 20.0 and 20.5 cents (R\$), an increase of approximately 7% over the same period last year, while passenger revenue per available seat-kilometer (PRASK) remained virtually stable year-on-year.

Webjet

Webjet's results will be included in GOL's results as of 4Q11. Beginning this month, the Company will announce Webjet's traffic data (ASK, RPK, and load factor) according to the table below.
