BCB Bancorp Inc. and Subsidiaries

Notes to Unaudited Consolidated Financial Statements

Note 1 – Basis of Presentation

The accompanying unaudited consolidated financial statements include the accounts of BCB Bancorp, Inc. (the "Company") and the Company's wholly owned subsidiaries, BCB Community Bank (the "Bank"), BCB Holding Company Investment Company, and Pamrapo Service Corporation. The Company's business is conducted principally through the Bank. All significant intercompany accounts and transactions have been eliminated in consolidation.

The accompanying unaudited consolidated financial statements have been prepared in accordance with the instructions to Form 10-Q and Regulation S-X and, therefore, do not necessarily include all information that would be included in audited financial statements. The information furnished reflects all adjustments that are, in the opinion of management, necessary for a fair presentation of consolidated financial condition and results of operations. All such adjustments are of a normal recurring nature. The results of operations for the three months ended March 31, 2012 are not necessarily indicative of the results to be expected for the fiscal year ending December 31, 2012 or any other future period. The preparation of the consolidated financial statements in conformity with accounting principles generally accepted in the United States of America ("GAAP") requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities as of the date of the consolidated statement of financial condition and revenues and expenses for the periods then ended. Actual results could differ significantly from those estimates.

These unaudited consolidated financial statements should be read in conjunction with the Company's audited consolidated financial statements and related notes for the year ended December 31, 2011, which are included in the Company's Annual Report on Form 10-K as filed with the Securities and Exchange Commission.

In preparing these consolidated financial statements, BCB Bancorp, Inc., evaluated the events and transactions that occurred between March 31, 2012, and the date these consolidated financial statements were issued.

Note 2 – Acquisition of Allegiance Bancorp, Inc.

On October 14, 2011, the Company acquired all of the outstanding common shares of Allegiance Community Bank ("Allegiance") and thereby acquired all of Allegiance Community Bank's two branch locations. Under the terms of the

merger agreement, Allegiance stockholders received 0.35 of a share of BCB Bancorp, Inc. common stock at a price of \$9.57 per share in exchange for each share of Allegiance common stock, resulting in BCB Bancorp, Inc. issuing 644,434 common shares of BCB Bancorp, Inc. common stock with an acquisition date fair value of \$6.2 million. ASC 805 "Business Combinations," permits the use of provisional amounts for the assets acquired and liabilities assumed when the information at acquisition date is incomplete. During the measurement period, which is one year from the acquisition date, amounts provisionally assigned to the acquisition may be adjusted based on new information obtained during the measurement period. Under no circumstances may the measurement period exceed one year from the acquisition date.

Note 3 – Pension and Other Postretirement Plans

The Company assumed, through the merger with Pamrapo Bancorp, Inc., a non-contributory defined benefit pension plan covering all eligible employees of Pamrapo Savings Bank. Effective January 1, 2010, the defined benefit pension plan ("Pension Plan"), was frozen by Pamrapo Savings Bank. All benefits for eligible participants accrued in the "Pension Plan" to the freeze date have been retained. Accordingly, no employees are permitted to commence participation in the Pension Plan and future salary increases and future years of service are not considered when computing an employee's benefits under the Pension Plan. The Pension Plan is funded in conformity with the funding requirements of applicable government regulations. The Company also acquired through the merger with Pamrapo Bancorp, Inc. a supplemental executive retirement plan ("SERP") in which certain former employees of Pamrapo Savings Bank are covered. A SERP is an unfunded non-qualified deferred retirement plan. Participants who retire at the age of 65 (the "Normal Retirement Age"), are entitled to an annual retirement benefit equal to 75% of compensation reduced by their retirement plan annual benefits. Participants retiring before the Normal Retirement Age receive the same benefits reduced by a percentage based on years of service to the Company and the number of years prior to the Normal Retirement Age that participants retire.

Periodic pension and SERP cost, which is recorded as part of salaries and employee benefits expense in our Consolidated Statements of Income, is comprised of the following, (In Thousands):

	Three months ended		
	March 31		
	2012	2011	
Pension plan:			
Interest cost	\$ 111	\$ 117	
Expected return on plan assets	(100)	(94)	
Amortization of unrecognized loss	28	_	
Net periodic pension cost	\$ 39	\$ 23	
SERP plan:			
Interest cost	\$ 5	\$ 7	

Net periodic postretirement cost \$ 5 \$ 7

Note 3 – Pension and Other Postretirement Plans (Continued)

Stock-Based Compensation Plan

The Company, under the plan approved by its shareholders on April 28, 2011 ("2011 Stock Plan"), authorized the issuance of up to 900,000 shares of common stock of BCB Bancorp, Inc. pursuant to grants of stock options. Employees and directors of BCB Bancorp, Inc. and BCB Community Bank are eligible to participate in the 2011 Stock Plan. All stock options will be granted in the form of either "incentive" stock options or "non-qualified" stock options. Incentive stock options have certain tax advantages that must comply with the requirements of Section 422 of the Internal Revenue Code. Only employees are permitted to receive incentive stock options. On September 29, 2011, a grant of 60,000 options was declared for certain members of the Board of Directors. The exercise price was recorded as of the close of business on September 29, 2011 and a Form 4 was filed for each Director as of that date with the Securities and Exchange Commission consistent with their filing requirements. No stock options were granted during the three months ended March 31, 2012.

A summary of stock option activity, adjusted to retroactively reflect subsequent stock dividends, follows:

	Number of Option Shares	Range of Exercise Prices	Weighted Average Exercise Price
Outstanding at December 31, 2011	317,976	\$5.29-29.25	\$ 11.61
Options forfeited Options exercised Options granted			 5.29
Outstanding at March 31, 2012	312,201	\$5.29-29.25	\$ 11.71

As of March 31, 2012, stock options which are granted and were exercisable totaled 257, 201 stock options.

Note 4 – Earnings Per Share

Basic net income per common share is computed by dividing net income by the weighted average number of shares of common stock outstanding. The diluted net income per common share is computed by adjusting the weighted average number of shares of common stock outstanding to include the effects of outstanding stock options, if dilutive, using the treasury stock method. For the three months ended March 31, 2012 and 2011, the weighted average of outstanding options considered to be anti-dilutive were 238,197 and 180,684, respectively, and were therefore, excluded from the diluted net income per common share calculation.

The following is a reconciliation of the numerators and denominators of the basic and diluted earnings per share computations:

The amortized cost and carrying values shown above are by contractual final maturity. Actual maturities will differ from contractual final maturities due to scheduled monthly payments related to mortgage—backed securities and due to the borrowers having the right to prepay obligations with or without prepayment penalties. As of March 31, 2012 and December 31, 2011, all residential mortgage backed securities held in the portfolio were Government Sponsored Enterprise securities.

During the first quarter of 2012, management decided to sell mortgage-backed securities that were issued by the Federal National Mortgage Association ("FNMA") and the Federal Home Loan Mortgage Corporation ("FHLMC").

While these securities were classified as held to maturity, ASC 320 (formerly FAS 115) allows sales of securities so designated, provided that a substantial portion (at least 85%) of the principal balance has been amortized prior to the sale. During the three months ended March 31, 2012, proceeds from sales of securities held to maturity totaled approximately \$16,290,000 and resulted in gross gains of approximately \$165,000 and gross losses of approximately \$37,000.

There were no sales of securities held to maturity during the three months ended March 31, 2011.

December 31, 2011 Residential mortgage-backed securities	\$16,949	\$	82	\$ 5,942	\$	38	\$22,891	\$	120
	\$16,949	\$	82	\$ 5,942	\$	38	\$22,891	\$	120

Management does not believe that any of the unrealized losses as of March 31, 2012, (which are related to twenty-four residential mortgage-backed securities) represent an other-than-temporary impairment as they are primarily related to market interest rates and not related to the underlying credit quality of the issuers of the securities as all these securities were issued by U.S. Agencies. Additionally, the Company has the ability, and management has the intent, to hold such securities for the time necessary to recover cost and does not have the intent to sell the securities, and it is more likely than not that it will not have to sell the securities before recovery of their cost.

Note 7 - Loans Receivable and Allowance for Loan Losses

The following table presents the recorded investment in loans receivable as of March 31, 2012 and December 31, 2011 by segment and class.

Deal and the second second	March 31, 2012 (In Thousa	December 31, 2011 ands)

Note 7 - Loans Receivable and Allowance for Loan Losses (Continued)

Allowance for Loan Losses

Management reviews the adequacy of the allowance on at least a quarterly basis to ensure that the provision for loan losses has been charged against earnings in an amount necessary to maintain the allowance at a level that is adequate based on management's assessment of probable estimated losses. The Company's methodology for assessing the adequacy of the allowance for loan losses consists of several key elements. These elements include a general allocated reserve for impaired loans, a specific reserve for impaired loans and an unallocated portion.

The Company consistently applies the following comprehensive methodology. During the quarterly review of the allowance for loan losses, the Company considers a variety of factors that include:

- •General economic conditions.
- •Trends in charge-offs.
- •Trends and levels of delinquent loans.
- •Trends and levels of non-performing loans, including loans over 90 days delinquent.
- •Trends in volume and terms of loans.
- •Levels of allowance for specific classified loans.
- •Credit concentrations.

The methodology includes the segregation of the loan portfolio by loans that are performing and loans that are impaired. Loans which are performing are evaluated collectively by loan class or loan type. The allowance for performing loans is evaluated based on historical loan loss experience, including consideration of peer loss analysis, with an adjustment for qualitative factors due to economic conditions in the Bank's market. Impaired loans are loans which are 90 days or more delinquent or troubled debt restructured. These loans are individually evaluated for impairment either by current appraisal or net present value of expected cash flows. Management reviews the overall estimate of this allowance for reasonableness and bases the loan loss provision accordingly.

The portfolio of performing loans is segmented into the following loan classes, where the risk level for each class is analyzed when determining the allowance for these loans:

Residential single family real estate loans involve certain risks such as interest rate risk and risk of non-repayment. Adjustable-rate residential family real estate loans decreases the interest rate risk to the Bank that is associated with changes in interest rates but involve other risks, primarily because as interest rates rise, the payment by the borrower rises to the extent permitted by the terms of the loan, thereby increasing the potential for default. At the same time, the marketability of the underlying property may be adversely affected by higher interest rates. Repayment risk can be affected by job loss, divorce, illness and personal bankruptcy of the borrower.

Commercial and multi-family real estate lending entails significant additional risks as compared with residential family property lending. Such loans typically involve large loan balances to single borrowers or groups of related borrowers. The payment experience on such loans is typically dependent on the successful operation of the real estate project. The success of such projects is sensitive to changes in supply and demand conditions in the market for commercial real estate as well as economic conditions generally.

Construction lending is generally considered to involve a high risk due to the concentration of principal in a limited number of loans and borrowers and the effects of the general economic conditions on developers and builders. Moreover, a construction loan can involve additional risks because of the inherent difficulty in estimating both a property's value at completion of the project and the estimated cost (including interest) of the project. The nature of these loans is such that they are generally difficult to evaluate and monitor. In addition, speculative construction loans to a builder are not necessarily pre-sold and thus pose a greater potential risk to the Bank than construction loans to individuals on their personal residence.

Commercial business lending is generally considered higher risk due to the concentration of principal in a limited number of loans and borrowers and the effects of general economic conditions on the business. Commercial business loans and lines of credit are primarily secured by inventories and other business assets. In most cases, any repossessed collateral for a defaulted commercial business loans will not provide an adequate source of repayment of the outstanding loan balance.

Home equity lending entails certain risks such as interest rate risk and risk of non-repayment. The marketability of the underlying property may be adversely affected by higher interest rates, decreasing the collateral securing the loan. Repayment risk can be affected by job loss, divorce, illness and personal bankruptcy of the borrower.

Home equity line of credit lending entails securing an equity interest in the borrower's home. The risk associated with this type of lending is the marketability of the underlying property may be adversely affected by higher interest rates. Repayment risk can be affected by job loss, divorce, illness and personal bankruptcy of the borrower. This type of lending is often priced on an adjustable rate basis with the rate set at or above a predefined index. Adjustable-rate loans decreases the interest rate risk to the Bank that is associated with changes in interest rates but involve other risks, primarily because as interest rates rise, the payment by the borrower rises to the extent permitted by the terms of the loan, thereby increasing the potential for default.

Consumer loans generally have more credit risk because of the type and nature of the collateral and, in certain cases, the absence of collateral. Consumer loans generally have shorter terms and higher interest rates than other lending. In addition, consumer lending collections are dependent on the borrower's continuing financial stability, and thus are more likely to be adversely effected by job loss, divorce, illness and personal bankruptcy. In most cases, any repossessed collateral for a defaulted consumer loan will not provide and adequate source of repayment of the outstanding loan.

Note 7 - Loans Receivable and Allowance for Loan Losses (Continued)

The Company also maintains an unallocated allowance. The unallocated allowance is used to cover any factors or conditions which may cause a potential loan loss but are not specifically identifiable. It is prudent to maintain an unallocated portion of the allowance because no matter how detailed an analysis of potential loan losses is performed, these estimates lack some element of precision. Management must make estimates using assumptions and information that is often subjective and changing rapidly. In addition, as an integral part of their examination process, the Federal Deposit Insurance Corporation will periodically review the allowance for loan losses and may require us to adjust the allowance based on their analysis of information available to it at the time of its examination.

Classified Assets. The Company's policies provide for a classification system for problem assets. Under this classification system, problem assets are classified as "substandard," "doubtful," "loss" or "special mention." An asset is considered substandard if it is inadequately protected by its current net worth and paying capacity of the borrower or of the collateral pledged, if any. Substandard assets include those characterized by the "distinct possibility" that "some loss" will be sustained if the deficiencies are not corrected. Assets classified as doubtful have all the weaknesses inherent in those classified substandard with the added characteristic that the weakness present makes "collection or liquidation in full" on the basis of currently existing facts, conditions, and values, "highly questionable and improbable." Assets classified as loss are those considered "uncollectible" and of such little value that their continuance as assets without the establishment of a specific loss reserve is not warranted, and the loan, or a portion thereof, is charged-off. Assets may be designated special mention because of potential weaknesses that do not currently warrant classification in one of the aforementioned categories.

When the Company classifies problem loans, it may establish general allowances for loan losses in an amount deemed prudent by management. General allowances represent loss allowances which have been established to recognize the inherent risk associated with lending activities, but which, unlike specific allowances, have not been allocated to particular problem assets. A portion of general loss allowances established to cover possible losses related to assets classified as substandard or doubtful may be included in determining our regulatory capital. Specific valuation allowances for loan losses generally do not qualify as regulatory capital. As of March 31, 2012, we had \$220,000 in assets classified as loss, \$7.4 million in assets classified as doubtful, \$37.3 million in assets classified as substandard, and \$37.4 million in assets classified as special mention. The loans classified as substandard represent primarily commercial loans secured either by residential real estate, commercial real estate or heavy equipment. The loans that have been classified substandard were classified as such primarily because either updated financial information has not been provided timely, or the collateral underlying the loan is in the process of being revalued.

The Company's internal credit risk grades are based on the definitions currently utilized by the banking regulatory agencies. The grades assigned and definitions are as follows, and loans graded excellent, above average, good and watch list (risk ratings 1-4) are treated as "pass" for grading purposes:

- 5 Special Mention- Loans currently performing but with potential weaknesses including adverse trends in borrower's operations, credit quality, financial strength, or possible collateral deficiency.
- 6 Substandard- Loans that are inadequately protected by current sound worth, paying capacity, and collateral support. The loan needs special and corrective attention.
- 7 *Doubtful* Weaknesses in credit quality and collateral support make full collection improbable, but pending reasonable factors remain sufficient to defer the loss status.
- 8 Loss- Continuance as a bankable asset is not warranted. However, this does not preclude future attempts at partial recovery.

The current methodology for this calculation is determined with the Company's specific Historical Loss Percentage ("HLP") for each loan type, using 2 years of prior Bank data (or 8 quarters). The relative weights of prior quarters are decayed logarithmically and are further adjusted based on the trend of the historical loss percentage at the time. Also, instead of applying consistent percentages to each of the credit risk grades, the current methodology applies a higher factor to classified loans based on a delinquency risk trend and concentration risk trend by using the past due and non-accrual as a percentage of the specific loan category.

Note 7 - Loans Receivable and Allowance for Loan Losses (Continued)

The following table sets forth the activity in the Bank's allowance for loan losses for the three months ended March 31, 2012 and recorded investment in loans receivable as of March 31, 2012. Net deferred loan fees of \$1,478,000 at March 31, 2012, are not included in table amounts. The following table also details the amount of total loans receivable, that are evaluated individually, and collectively, for impairment, and the related portion of the allowance for loan losses that is allocated to each loan class (In Thousands):

Note 7 - Loans Receivable and Allowance for Loan Losses (Continued)

The tables below sets forth the amounts and types of non-accrual loans in the Bank's loan portfolio, as of March 31, 2012 and December 31, 2011. Loans are placed on non-accrual status when they become more than 90 days delinquent, or when the collection of principal and/or interest become doubtful. As of March 31, 2012 and December 31, 2011, total non-accrual loans differed from the amount of total loans past due greater than 90 days due to troubled debt restructuring of loans which are maintained on non-accrual status for a minimum of six months until the borrower has demonstrated its ability to satisfy the terms of the restructured loan.

	As of March 31, 2012 (In Thousands)

Note 7 - Loans Receivable and Allowance for Loan Losses (Continued)

The following table presents the unpaid principal balance and the related recorded investment of acquired loans included in our Consolidated Statements of Financial Condition.

	March	December		
	31,	31,		
	2012	2011		
	(In Thousands)			
Unpaid principal balance	\$379,922	\$410,057		
Recorded investment	375,421	405,951		

The following table presents changes in the accretable discount on loans acquired for the three months ended March 31, 2012 and 2011, (In Thousands):

	March	March			
	31,	31,			
	2012	2011			
	(In Thousands)				
Beginning Balance	\$180,722	\$205,491			
Accretion	(13,593)	(12,126)			
Ending Balance	\$167,129	\$193,365			

No interest income is being recognized on loans acquired where the fair value of the loan was based on the cash flows expected to be received from the foreclosure and sale of the underlying collateral. The carrying value of these loans as of March 31, 2012 and December 31, 2011, was \$12.5 million and \$13.3 million, respectively.

Note 8 – Fair Values of Financial Instruments

Guidance on fair value measurements establishes a fair value hierarchy that prioritizes the inputs to valuation methods used to measure fair value. The hierarchy gives the highest priority to unadjusted quoted prices in active markets for identical assets and liabilities (Level 1 measurements) and the lowest priority to unobservable inputs (Level 3 measurements). The three levels of the fair value hierarchy are as follows:

Level 1: Unadjusted quoted prices in active markets that are accessible at the measurement date for identical, unrestricted assets or liabilities.

Level 2: Quoted prices in markets that are not active, or inputs that are observable either directly or indirectly, for substantially the full term of the asset or liability.

Level 3: Prices or valuation techniques that require inputs that are both significant to the fair value measurement and unobservable (i.e. supported with little or no market activity).

An asset or liability's level within the fair value hierarchy is based on the lowest level of input that is significant to the fair value measurement.

The only assets or liabilities that the Company measured at fair value on a recurring basis were as follows (In Thousands):

Description	Total	Qu Ac for	evel 1) uoted Prices in ctive Markets r Identical ssets	(Leve Signif Other Obser Inputs	icant vable	(Level 3 Signific Unobse Inputs	ant
As of March 31, 2012:							
Securities available for sale — Equity Securities	es\$1,190	\$	1,190	\$		\$	_
As of December 31, 2011:							
Securities available for sale — Equity Securities	es\$1,045	\$	1,045	\$	_	\$	_

There were no transfers of assets or liabilities into or out of Level 1, Level 2, or Level 3 of the fair value hierarchy during the three months ended March 31, 2012.

The Company's policy is to recognize transfers between levels as of the actual date of the event or change in circumstances that caused the transfer. There were no transfers of assets or liabilities into or out of Level 1, Level 2, or Level 3 of the fair value hierarchy during the three months ended March 31, 2012.

The only assets or liabilities that the Company measured at fair value on a nonrecurring basis were as follows (In Thousands):

Description	Total	(Level 1) Quoted Prices in Active Markets for Identical Assets		(Level 2) Significant Other Observable Inputs		(Level 3) Significant Unobservable Inputs	
As of March 31, 2012:				•			
Impaired loans	\$26,801	\$	_	\$		\$ 26,801	
As of December 31, 2011:							
Impaired Loans Real estate owned	\$23,007 \$300	\$ \$		\$ \$		\$ 23,007 \$ 300	
Real estate owned	\$ 3 00	Φ		Ф		\$ 300	

Note 8 – Fair Values of Financial Instruments (Continued)

The following table presents additional quantitative information about assets measured at fair value on a nonrecurring basis and for which the Company has utilized adjusted Level 3 inputs to determine fair value:

Quantitative Information about Level 3 Fair Value Measurements

Fair Value Valuation Unobservable Range (Weighted

Estimate Techniques Input Average)

March 31, 2012:

Impaired Loans \$26,801 Appraisal of collateral (1) Appraisal adjustments (2) 10%

Liquidation expenses (3) 10%

- (1) Fair value is generally determined through independent appraisals of the underlying collateral, which generally include various level 3 inputs which are not identifiable.
- Appraisals may be adjusted by management for qualitative factors such as economic conditions and estimated (2) liquidation expenses. The range and weighted average of liquidation expenses and other appraisal adjustments are presented as a percent of the appraisal.
 - (3) Includes qualitative adjustments by management and estimated liquidation expenses.

The following information should not be interpreted as an estimate of the fair value of the entire Company since a fair value calculation is only provided for a limited portion of the Company's assets and liabilities. Due to a wide range of valuation techniques and the degree of subjectivity used in making the estimates, comparisons between the Company's disclosures and those of other companies may not be meaningful. The following methods and assumptions were used to estimate the fair values of the Company's financial instruments as of March 31, 2012 and December 31, 2011.

Cash and Cash Equivalents (Carried at Cost)

The carrying amounts reported in the consolidated statements of financial condition for cash and short-term instruments approximate those assets' fair values.

Securities

The fair value of securities available for sale (carried at fair value) and held to maturity (carried at amortized cost) are determined by obtaining quoted market prices on nationally recognized securities exchanges (Level 1), or matrix pricing (Level 2), which is a mathematical technique used widely in the industry to value debt securities without relying exclusively on quoted market prices for the specific securities but rather by relying on the securities' relationship to other benchmark quoted prices. For certain securities which are not traded in active markets and/or are subject to transfer restrictions, valuations are adjusted to reflect illiquidity and/or non-transferability, and such adjustments are generally based on available market evidence (Level 3). In the absence of such evidence, management's best estimate is used. Management's best estimate consists of both internal and external support on certain Level 3 investments. Internal cash flow models using a present value formula that includes assumptions market participants would use along with indicative exit pricing obtained from broker/dealers (where available) were used to support fair values of certain Level 3 investments.

Loans Held for Sale (Carried at Lower of Cost or Fair Value)

The fair value of loans held for sale is determined, when possible, using quoted secondary-market prices. If no such quoted prices exist, the fair value of a loan is determined using quoted prices for a similar loan or loans, adjusted for specific attributes of that loan. Loans held for sale are carried at their cost as of March 31, 2012 and December 31, 2011.

Loans Receivable (Carried at Cost)

The fair values of loans are estimated using discounted cash flow analyses, using market rates at the balance sheet date that reflect the credit and interest rate-risk inherent in the loans. Projected future cash flows are calculated based upon contractual maturity or call dates, projected repayments and prepayments of principal. Generally, for variable rate loans that reprice frequently and with no significant change in credit risk, fair values are based on carrying values.

Impaired Loans (Generally Carried at Fair Value)

A loan is impaired when, based on current information and events, it is probable that a creditor will be unable to collect all amounts due according to the contractual terms of the loan agreement. Impaired loans are measured based on the present value of expected future cash flows discounted at the loan's effective interest rate, or as a practical expedient, at the loans observable market price or the fair value of the collateral if the loan is collateral dependent. Fair value is generally determined based upon independent third-party appraisals of the properties, or discounted cash flows based upon the expected proceeds. These assets are included as Level 3 fair values, based upon the lowest level of input that is significant to the fair value measurements. The fair value consists of the loan balances of \$29,565,000 and \$26,398,000, net of a valuation allowance of \$2,764,000 and \$3,391,000 as of March 31, 2012 and December 31, 2011, respectively.

Table of Contents

Note 8 – Fair Values of Financial Instruments (Continued)

Real Estate Owned (Generally Carried at Fair Value)

Real Estate Owned is generally carried at fair value, when the carry value is written down to fair value, which is determined based upon independent third-party appraisals of the properties, or based upon the expected proceeds from a pending sale. These assets are included as Level 3 fair values, based upon the lowest level of input that is significant to the fair value measurements.

FHLB of New York Stock (Carried at Cost)

The carrying amount of restricted investment in bank stock approximates fair value, and considers the limited marketability of such securities.

Interest Receivable and Payable (Carried at Cost)

The carrying amount of interest receivable and interest payable approximates its fair value.

Deposits (Carried at Cost)

The fair values disclosed for demand deposits (e.g., interest and non-interest checking, passbook savings and money market accounts) are, by definition, equal to the amount payable on demand at the reporting date (i.e., their carrying amounts). Fair values for fixed-rate certificates of deposit are estimated using a discounted cash flow calculation that applies interest rates currently being offered in the market on certificates to a schedule of aggregated expected monthly maturities on time deposits.

Long-Term Debt (Carried at Cost)

Fair values of long-term debt are estimated using discounted cash flow analysis, based on quoted prices for new long-term debt with similar credit risk characteristics, terms and remaining maturity. These prices obtained from this active market represent a market value that is deemed to represent the transfer price if the liability were assumed by a third party.

Off-Balance Sheet Financial Instruments

Fair values for the Company's off-balance sheet financial instruments (lending commitments and unused lines of credit) are based on fees currently charged in the market to enter into similar agreements, taking into account, the remaining terms of the agreements and the counterparties' credit standing. The fair value of these commitments was deemed immaterial and is not presented in the accompanying table.

Note 8 – Fair Values of Financial Instruments (Continued)

The carrying values and estimated fair values of financial instruments were as follows as of March 31, 2012 and December 31, 2011:

	Carrying Value (In Thousa	Fair Value	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
