Return on Equity/Return on Capital:

In order to accommodate the various perspectives, LNC presents three separate Return on Equity numbers on pages 2 and 3 of this Statistical Report. "Net Income Divided by Average Shareholders' Equity" tends to fluctuate from period to period due to the realization of gains on the sale of investments or subsidiaries during one period and the planned generation of losses in another period for purposes of recovering Federal Taxes previously paid. "Income from Operations Divided by Average Shareholders' Equity" is less volatile but leaves out an important element of earnings for a company that has a long-term goal of enhancing shareholder value by realizing investment gains. "Adjusted Income from Operations Divided by Adjusted Shareholders' Equity" amortizes: 1) realized security gains on investments 2) unrealized gains on equity securities over approximately five years and eliminates amortization of goodwill related to acquisitions.

Return on capital measures the effectiveness of LNC's use of its total capital, which is made up of equity, debt and hybrid securities. Return on capital is calculated by dividing income from operations (after adding back after-tax interest expense) by average capital. The difference between return on capital and return on equity presents the effect of leveraging on LNC's consolidated results.
