ABAXIS, INC.
NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(Unaudited)

NOTE 1. DESCRIPTION OF BUSINESS AND SIGNIFICANT ACCOUNTING POLICIES

Description of Business. Abaxis, Inc. (Abaxis, the Company, or we), incorporated in California in 1989, develops, manufactures, markets and sells portable blood analysis systems for use in the human or veterinary patient-care setting to provide clinicians with rapid blood constituent measurements.

On July 1, 2008, our sales office in Darmstadt, Germany was incorporated as Abaxis Europe GmbH to market, promote and distribute diagnostic systems for medical and veterinary uses. Abaxis Europe GmbH, our wholly-owned subsidiary, was formed to provide customer support in a timely manner in response to the growing and increasingly diverse services needs of customers in the European market.

Principles of Consolidation. The accompanying unaudited condensed consolidated financial statements as of and for the three and six month periods ended September 30, 2009 include the accounts of Abaxis and our wholly-owned subsidiary, Abaxis Europe GmbH. All intercompany transactions and balances have been eliminated in consolidation.

Basis of Presentation. We have prepared the unaudited condensed consolidated financial statements included herein pursuant to the rules and regulations of the Securities and Exchange Commission (the SEC) for interim periods. The unaudited condensed consolidated financial statements included herein reflect all normal recurring adjustments, which are, in the opinion of our management, necessary to state fairly the results of operations and financial position for the periods presented. The results for the three and six month periods ended September 30, 2009 are not necessarily indicative of the results to be expected for the entire fiscal year ending March 31, 2010 or for any interim or future period.

These unaudited condensed consolidated financial statements should be read in conjunction with Management's Discussion and Analysis of Financial Condition and Results of Operations and the audited financial statements and notes thereto included in our Annual Report on Form 10-K for the fiscal year ended March 31, 2009.

In preparing the accompanying unaudited condensed consolidated financial statements, we have reviewed, as determined necessary by our management, events that have occurred after September 30, 2009 and through the time of filing these condensed consolidated financial statements on Form 10-Q with the SEC on November 9, 2009. There were no subsequent events requiring recognition or disclosure in the financial statements.

Reclassifications. Certain reclassifications have been made to prior periods' financial statements to conform to the current period presentation. These reclassifications had no material impact on previously reported results of operations or financial position.

Use of Estimates in Preparation of Financial Statements. The preparation of financial statements in accordance with accounting principles generally accepted in the United States of America requires our management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the reporting period. Such management estimates include allowance for doubtful accounts, fair value of investments, sales and other allowances, valuation of inventory, fair values of purchased intangible assets, useful lives of intangible assets, income taxes, valuation allowance for deferred tax assets, share-based compensation and warranty reserves. Our management bases their estimates on historical experience and on various other assumptions that are believed to be reasonable, the results of which form the basis for making judgments about the carrying values of assets and liabilities. Our actual results may differ materially from these estimates.

Significant Accounting Policies. The significant accounting policies used in preparation of these condensed consolidated financial statements are consistent with those disclosed in our Annual Report on Form 10-K for the year ended March 31, 2009 filed with the SEC on June 12, 2009, except for the adoption of new accounting standards during the first six months of fiscal 2010 as discussed below.

Table of Contents**NOTE 2. RECENT ACCOUNTING PRONOUNCEMENTS**

In October 2009, the Financial Accounting Standards Board (the FASB) issued amendments to the accounting standard addressing multiple-deliverable revenue arrangements. The amendments provide guidance in addressing how to determine whether an arrangement involving multiple deliverables contains more than one unit of accounting, and how to allocate the consideration to each unit of accounting. In an arrangement with multiple deliverables, the delivered items shall be considered a separate unit of accounting if the delivered items have value to the customer on a stand-alone basis. Items have value on a stand-alone basis if they are sold separately by any vendor or the customer could resell the delivered items on a stand-alone basis; and if the arrangement includes a general right of return relative to the delivered items, delivery or performance of the undelivered items is considered probable and substantially in the control of the vendor. We are currently evaluating the impact of adopting these amendments on our financial statements.

In June 2009, the FASB issued the FASB Accounting Standards Codification (the Codification) as the single source of authoritative U.S. generally accepted accounting principles (U.S. GAAP) recognized by the FASB. The Codification does not change current U.S. GAAP, but is intended to simplify user access to all authoritative U.S. GAAP by providing all the authoritative literature related to a particular topic in one place. All existing accounting standard documents will be superseded and all other accounting literature not included in the Codification will be considered non-authoritative. While the adoption of the Codification as of September 30, 2009 for the three month period then ended and all subsequent annual and interim periods changes how we reference accounting standards, the adoption did not have an impact on our consolidated financial position, results of operations, or cash flows.

On June 30, 2009, we adopted amendments to the accounting standard addressing subsequent events. The amendments provide guidance on the definition of what qualifies as a subsequent event—those events or transactions that occur following the balance sheet date, but before the financial statements are issued, or are available to be issued and requires companies to disclose the date through which subsequent events were evaluated and the basis for determining that date. This disclosure should alert all users of financial statements that a company has not evaluated subsequent events after that date in the set of financial statements being presented. The amendments required additional disclosures only, and therefore did not have a material impact on our consolidated financial position, results of operations or cash flows.

On June 30, 2009, we adopted amendments to the accounting standard addressing debt securities. The amendments provide guidance in determining whether impairments in debt securities are other than temporary, and modify the presentation and disclosures surrounding such instruments. The adoption of these amendments did not have a material impact on our consolidated financial position, results of operations or cash flows.

On June 30, 2009, we adopted amendments to the accounting standard addressing fair value of financial instruments in interim reporting periods. The amendments provide guidance on the disclosure requirements about fair value of financial instruments in interim reporting periods. Such disclosures were previously required only in annual financial statements. The adoption of these amendments did not have a material impact on our consolidated financial position, results of operations or cash flows.

On June 30, 2009, we adopted amendments to the accounting standard addressing estimating fair value. The amendments provide additional authoritative guidance to assist both issuers and users of financial statements in determining whether a market is active or inactive, and whether a transaction is distressed. The adoption of these amendments did not have a material impact on our consolidated financial position, results of operations or cash flows.

On April 1, 2009, we adopted amendments to the accounting standard addressing intangibles, goodwill and other assets. The amendments provide guidance to improve the consistency between the useful life of a recognized intangible asset and the period of expected cash flows used to measure the fair value of the asset under U.S. GAAP. The adoption of these amendments did not have a material impact on our consolidated financial position, results of operations or cash flows.

On April 1, 2009, we adopted amendments to the accounting standard addressing derivatives and hedging. The amendments change the disclosure requirements for derivative instruments and hedging activities, requiring enhanced disclosures about how and why an entity uses derivative instruments, how instruments are accounted for under U.S. GAAP, and how derivatives and hedging activities affect an entity's financial position, financial performance and cash

flows. The adoption of these amendments required additional disclosure only, and therefore did not have an impact on our consolidated financial position, results of operations, or cash flows.

As of September 30, 2009 and March 31, 2009, unrealized gain (loss) on investments, net of related income taxes, was \$(3,000) and \$0, respectively.

The contractual maturities of short-term and long-term investments as of September 30, 2009, are as follows (in thousands):

Investments excluding asset-backed securities	Fair Value
Due in less than one year	\$ 16,441
Due in 1 to 4 years	18,926
Asset-backed securities(1)	
Weighted average maturity less than 1 year	399
Weighted average maturity 1 to 2 years	228
 Total investments	 \$ 35,994

(1) Asset-backed securities are separately disclosed as they are not due at a single maturity date.

NOTE 4. FAIR VALUE MEASUREMENTS

On April 1, 2008, we adopted amendments to the accounting standard addressing the measurement of the fair value of financial assets and financial liabilities. The amendments provide guidance on defining fair value as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The amendments establish a fair value hierarchy that distinguishes between (1) market participant assumptions developed based on market data obtained from independent sources (observable inputs) and (2) an entity's own assumptions about market participant assumptions developed based on the best information available in the circumstances (unobservable inputs). The fair value hierarchy consists of three broad levels, which gives the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3). The three levels of the fair value hierarchy are described below:

Table of Contents

Level 1: Quoted prices (unadjusted) in active markets for identical assets or liabilities.

Level 2: Directly or indirectly observable inputs as of the reporting date through correlation with market data, including quoted prices for similar assets and liabilities in active markets and quoted prices in markets that are not active. Level 2 also includes assets and liabilities that are valued using models or other pricing methodologies that do not require significant judgment since the input assumptions used in the models, such as interest rates and volatility factors, are corroborated by readily observable data from actively quoted markets for substantially the full term of the financial instrument.

Level 3: Unobservable inputs that are supported by little or no market data and require the use of significant management judgment. These values are generally determined using pricing models for which the assumptions utilize management's estimates of market participant assumptions.

The following table summarizes financial assets, measured at fair value on a recurring basis, by level within the fair value hierarchy as of September 30, 2009 (in thousands):

	As of September 30, 2009			Total
	Quoted Prices in Active Markets for Identical Assets	Significant Other Observable Inputs	Significant Unobservable Inputs	
	Level 1	Level 2	Level 3	
Assets				
Cash equivalents	\$34,596	\$	\$	\$34,596
Short-term investments:				
Asset-backed securities		627		627
Total assets at fair value	\$34,596	\$ 627	\$	\$35,223

Our Level 1 financial assets are cash equivalents, comprised of money market mutual funds, which are highly liquid instruments with original or remaining maturities of three months or less at the time of purchase that are readily convertible into cash. The fair value of our Level 1 financial assets is based on quoted market prices of the underlying security. The fair value of our Level 2 financial assets, comprised of asset-backed securities, is based on readily-available pricing sources for the identical underlying security that may, or may not, be actively traded. As of September 30, 2009, we did not have any Level 3 financial assets or liabilities.

NOTE 5. INVENTORIES

Inventories, include material, labor and overhead, and are stated at the lower of cost (first-in, first-out method) or market. Components of inventories were as follows (in thousands):

	September 30, 2009	March 31, 2009
Raw materials	\$ 8,620	\$ 8,539
Work-in-process	2,694	2,592
Finished goods	4,998	4,604

Total Inventories	\$16,312	\$15,735
-------------------	----------	----------

NOTE 6. WARRANTY RESERVES

We provide for the estimated future costs to be incurred under our standard warranty obligation on our instruments and reagent discs.

Instruments. Our standard warranty obligation on instruments ranges from two to three years. The estimated contractual warranty obligation is recorded when the related revenue is recognized and any additional amount is recorded when such cost is probable and can be reasonably estimated. The estimated accrual for warranty exposure is based on historical experience, estimated product failure rates, material usage, freight incurred in repairing the instrument after failure and known design changes.

Reagent Discs. We record a provision for defective reagent discs when the related sale is recognized and any additional amount is recorded when such cost is probable and can be reasonably estimated. The warranty cost includes the replacement costs and freight of a defective reagent disc. During the three and six months ended September 30, 2009, the provision for warranty expense related to replacement of defective reagent discs was \$(50,000) and \$25,000, respectively. The balance of accrued warranty reserve related to replacement of defective reagent discs at September 30, 2009 and 2008 was \$328,000 and \$392,000, respectively, which was classified as a current liability on the balance sheet.

We evaluate our estimates for warranty reserves on an ongoing basis and believe we have the ability to reasonably estimate warranty costs. However, unforeseeable changes in factors may impact the estimate for warranty and such changes could cause a material change in our warranty reserve accrual in the period in which the change was identified.

Table of Contents

The change in our accrued warranty reserve during the three and six months ended September 30, 2009 and 2008 is summarized as follows (in thousands):

	Three Months Ended September 30,		Six Months Ended September 30,	
	2009	2008	2009	2008
Balance at beginning of period	\$2,385	\$2,115	\$2,297	\$1,948
Provision for warranty expense	144	512	401	1,019
Warranty costs incurred	(301)	(385)	(470)	(725)
Balance at end of period	2,228	2,242	2,228	2,242
Non-current portion of warranty reserve	730	625	730	625
Current portion of warranty reserve	\$1,498	\$1,617	\$1,498	\$1,617

NOTE 7. LINE OF CREDIT

We have a line of credit with Comerica Bank-California which provides for borrowings of up to \$2.0 million. The line of credit may be terminated upon notification by either party and any outstanding balance is payable upon demand. The line of credit bears interest at the bank's prime rate minus 0.25%, which totaled 3.00% at September 30, 2009, and is payable monthly. At September 30, 2009, of the \$2.0 million available, \$97,000 was committed to secure a letter of credit for our facilities lease. At September 30, 2009, there was no amount outstanding under our line of credit. The weighted average interest rates on the line of credit during the three months ended September 30, 2009 and 2008 were 3.00% and 4.75%, respectively.

The line of credit agreement contains certain financial covenants, which are evaluated on a quarterly basis. At September 30, 2009, we were in compliance with each of these covenants. Included in these financial covenants, among other stipulations, are the following requirements:

We must have a minimum net income of \$25,000 before preferred stock dividends and accretion on preferred stock in any three quarters of a fiscal year, provided that any loss before preferred stock dividends and accretion on preferred stock incurred in the remaining quarter is not to exceed \$250,000.

We are required to be profitable, as defined, on a fiscal year to date basis beginning, with respect to the current fiscal year, with the six month period ended September 30, 2009 and to have net income before preferred stock dividends and accretion on preferred stock of at least \$1.2 million for the fiscal year ending March 31, 2010.

We are required to comply with certain financial covenants as follows:

Financial Covenants**Requirements**

Quick ratio, as defined	Not less than 2.00 to 1.00
Cash flow coverage, as defined	Not less than 1.25 to 1.00
Debt to net worth ratio, as defined	Not greater than 1.00 to 1.00
Tangible effective net worth, as defined	Not less than \$25.7 million
Borrowings under the line of credit are collateralized by our net book value of assets of \$136.1 million at September 30, 2009, including our intellectual property.	

NOTE 8. COMMITMENTS AND CONTINGENCIES

Purchase Commitments. In October 2008, we entered into an original equipment manufacturing (OEM) agreement with Scandinavian Micro Biodevices APS (SMB) of Denmark to purchase coagulation analyzers and coagulation cartridges. In the fourth quarter of fiscal 2009, we started marketing the products and, upon achievement of certain

milestones by SMB outlined in the agreement, we will be subject to the minimum purchase commitments under the OEM agreement. These milestones have not yet been met and we are currently purchasing coagulation analyzers and coagulation cartridges on a purchase order basis, but all such purchases will count towards the minimum purchase obligations if and when they are triggered.

Patent License Agreement. Effective January 2009, we entered into a license agreement with Inverness Medical Switzerland GmbH (Inverness). Under our license agreement, we licensed co-exclusively certain worldwide patent rights related to lateral flow immunoassay technology in the field of animal health diagnostics in the professional marketplace. The license agreement provides that Inverness shall not grant any future rights to any third parties under its current lateral flow patent rights in the animal health diagnostics field in the professional marketplace. The license agreement enables us to develop and market products under rights from Inverness to address animal health and laboratory animal research markets.

In exchange for the license rights, we (i) paid an up-front license fee of \$5.0 million to Inverness in January 2009, (ii) agreed to pay royalties during the term of the agreement, based solely on sales of products in a jurisdiction country covered by valid and unexpired

Table of Contents

claims in that jurisdiction under the licensed Inverness patent rights, and (iii) agreed to pay a yearly minimum license fee of between \$500,000 to \$1.0 million per year, which fee will be creditable against any royalties due during such calendar year. The royalties, if any, are payable through the date of the expiration of the last valid patent licensed under the agreement that includes at least one claim in a jurisdiction covering products we sell in that jurisdiction. The yearly minimum fees are payable starting in fiscal 2011 for so long as we desire to maintain exclusivity under the agreement.

Litigation. We are involved from time to time in various litigation matters in the normal course of business. We believe that the ultimate resolution of these matters will not have a material effect on our financial position or results of operations.

NOTE 9. SHARE-BASED COMPENSATION

We recognize share-based compensation expense, net of an estimated forfeiture rate, over the requisite service period of the award to employees and directors. Share-based compensation has been classified in the statements of operations or capitalized on the balance sheets in the same manner as cash compensation paid to employees. Non-cash compensation expense recognized for share-based awards during the three months ended September 30, 2009 and 2008 was \$1.4 million and \$434,000, respectively, and during the six months ended September 30, 2009 and 2008 was \$2.3 million and \$835,000, respectively. Capitalized share-based compensation costs at September 30, 2009 and 2008 were \$71,000 and \$23,000, respectively, which were included in inventories on our Condensed Consolidated Balance Sheets.

Cash Flow Impact

The FASB accounting standard with respect to share-based payment requires cash flows resulting from excess tax benefits to be classified as a part of cash flows from financing activities. Excess tax benefits are realized tax benefits from tax deductions for exercised stock options and vested restricted stock units in excess of the deferred tax asset attributable to share-based compensation expense for such share-based awards. Excess tax benefits are considered realized when the tax deductions reduce taxes that otherwise would be payable. Excess tax benefits classified as a financing cash inflow for the three months ended September 30, 2009 and 2008 were \$161,000 and \$1.3 million, respectively, and for the six months ended September 30, 2009 and 2008 were \$351,000 and \$3.1 million, respectively.

Equity Compensation Plans

Our share-based compensation plans are described below.

2005 Equity Incentive Plan. Our 2005 Equity Incentive Plan (the *Equity Incentive Plan*) restated and amended our 1998 Stock Option Plan. The Equity Incentive Plan allows for the awards of stock options, stock appreciation rights, restricted stock awards, restricted stock units, performance shares, performance units, deferred compensation awards or other share-based awards to employees, directors and consultants. On October 28, 2008, our shareholders approved an amendment to the Equity Incentive Plan to increase the shares reserved for issuance under the Equity Incentive Plan by 500,000 shares. As of September 30, 2009, the Equity Incentive Plan provides for the issuance of a maximum of 5,386,000 shares, of which 477,000 shares of common stock were then available for future issuance.

Options granted to employees and directors generally expire ten years from the grant date. Options granted to employees generally become exercisable over a period of four years based on cliff-vesting terms and continuous employment. Options granted to non-employee directors generally become exercisable over a period of one year based on monthly vesting terms and continuous service. See the *Stock Options* section in this Note for additional information.

Restricted stock units awarded to employees generally vest over a period of four years and the awards may also be subject to accelerated vesting upon achieving certain performance-based milestones and continuous employment during the vesting period. Restricted stock units awarded to non-employee directors generally vest in full one year after the grant date based on continuous service. See the *Restricted Stock Units* section in this Note for additional information.

1992 Outside Directors Stock Option Plan. Under our 1992 Outside Directors Stock Option Plan (the *Directors Plan*), options to purchase shares of common stock were automatically granted, annually, to non-employee directors. Options under the Directors Plan were nonqualified stock options and were granted at the fair market value on the date

of grant and expired ten years from the date of grant. Options granted to non-employee directors generally become exercisable over a period of one year based on monthly vesting terms and continuous service. The Directors Plan provided for the issuance of a maximum of 250,000 shares. As of September 30, 2009, all outstanding options under the Directors Plan were fully vested and fully exercisable and no shares of common stock were available for future issuance because the time period for granting options expired in accordance with the terms of the Directors Plan in June 2002.

Our current practice is to issue new shares of common stock from our authorized shares for share-based awards upon the exercise of stock options or vesting of restricted stock units.

Table of Contents**Stock Options**

Prior to April 1, 2006, we granted stock options to employees, with an exercise price equal to the closing market price of our common stock on the date of grant and with cliff-vesting terms over four years, conditional on continuous employment with the Company. In addition, prior to April 1, 2006, we granted stock options to non-employee directors with an exercise price equal to the closing market price of our common stock on the date of grant and became exercisable over a period of one year based on monthly vesting terms, conditional on continuous service to the Company. There were no stock options granted since the beginning of fiscal 2007 or during the six months ended September 30, 2009.

We used the Black-Scholes option pricing model to determine the fair value of stock options granted prior to March 31, 2006. The fair value of each stock option granted was estimated on the date of the grant using the Black-Scholes option pricing model, based on a multiple option valuation approach. We have recognized compensation expense during the requisite service period of the stock option. As of September 30, 2009, we had no unrecognized compensation expense related to stock options granted.

Stock Option Activity

The following table summarizes information regarding options outstanding and options exercisable at September 30, 2009 and the changes during the six-month period then ended:

	Number of Shares	Weighted Average Exercise Price Per Share	Weighted Average Remaining Contractual Life (Years)	Aggregate Intrinsic Value (In thousands)
Outstanding at March 31, 2009	848,000	\$8.86		
Granted				
Exercised	(37,000)	5.57		
Canceled or forfeited				
Outstanding at September 30, 2009	811,000	\$9.01	2.77	\$ 14,398
Vested and expected to vest at September 30, 2009	811,000	\$9.01	2.77	\$ 14,398
Exercisable at September 30, 2009	811,000	\$9.01	2.77	\$ 14,398

The aggregate intrinsic value in the table above represents the pre-tax intrinsic value, based on our closing stock price as of September 30, 2009, that would have been received by the option holders had all option holders exercised their stock options as of that date. Total intrinsic value of stock options exercised during the three months ended September 30, 2009 and 2008 was \$500,000 and \$230,000, respectively, and during the six months ended September 30, 2009 and 2008 was \$665,000 and \$1.0 million, respectively. Cash proceeds from stock options exercised during the three months ended September 30, 2009 and 2008 were \$167,000 and \$123,000, respectively, and during the six months ended September 30, 2009 and 2008 were \$205,000 and \$341,000, respectively.

Restricted Stock Units

We grant restricted stock unit awards to employees and directors as part of our share-based compensation program which began in fiscal 2007. The restricted stock unit awards entitle holders to receive shares of common stock at the end of a specified period of time. Vesting for restricted stock unit awards is based on continuous employment or service of the holder. Upon vesting, the equivalent number of common shares are typically issued net of tax withholdings. If the vesting conditions are not met, unvested restricted stock unit awards will be forfeited. Generally,

the restricted stock unit awards vest according to one of the following time-based vesting schedules:

Restricted stock unit awards to employees: Four-year time-based vesting as follows: five percent vesting after the first year; additional ten percent after the second year; additional 15 percent after the third year; and the remaining 70 percent after the fourth year of continuous employment with the Company.

Restricted stock unit awards to non-employee directors: 100 percent vesting after one year of continuous service to the Company.

Certain restricted stock unit awards granted to employees in fiscal 2007 may also be subject to accelerated vesting upon achieving certain performance-based milestones. Additionally, the Compensation Committee of our Board of Directors (the Compensation Committee), in its discretion, may provide in the event of a change in control for the acceleration of vesting and/or settlement of the restricted stock unit held by a participant upon such conditions and to such extent as determined by the Compensation Committee. Our Board of Directors has adopted an executive change in control severance plan, which it may terminate or amend at any time, that provides that awards granted to executive officers will accelerate fully on a change of control. The vesting of non-employee director awards granted under the Equity Incentive Plan automatically will also accelerate in full upon a change in control.

The fair value of restricted stock unit awards used in our expense recognition method is measured based on the number of shares granted and the closing market price of our common stock on the date of grant. Such value is recognized as an expense over the

Table of Contents

corresponding requisite service period. The share-based compensation expense is reduced for an estimate of the restricted stock unit awards that are expected to be forfeited. The forfeiture estimate is based on historical data and other factors, and compensation expense is adjusted for actual results. As of September 30, 2009, the total unrecognized compensation expense related to restricted stock unit awards granted amounted to \$14.8 million, which is expected to be recognized over a weighted average service period of 2.34 years.

Restricted Stock Unit Activity

The following table summarizes restricted stock unit activity for the six months ended September 30, 2009:

	Number of Shares	Weighted Average Grant Date Fair Value(1)
Unvested at March 31, 2009	690,000	\$ 23.43
Granted	285,000	17.90
Vested(2)	(73,000)	23.57
Canceled or forfeited	(59,000)	23.57
Unvested at September 30, 2009	843,000	\$ 21.54

(1) The weighted average grant date fair value of restricted stock units is based on the number of shares and the closing market price of our common stock on the date of grant.

(2) The number of restricted stock units vested includes shares that we withheld on behalf of our employees to satisfy the statutory tax withholding requirements.

Total intrinsic value of restricted stock units vested during the three months ended September 30, 2009 and 2008 was \$368,000 and \$141,000, respectively, and during the six months ended September 30, 2009 and 2008 was \$1.3 million

and \$1.1 million, respectively. The total grant date fair value of restricted stock units vested during the three months ended September 30, 2009 and 2008 was \$282,000 and \$155,000, respectively, and during the six months ended September 30, 2009 and 2008 was \$1.7 million and \$1.0 million, respectively.

NOTE 10. NET INCOME PER SHARE

Basic net income per share is computed by dividing the net income attributable to common shareholders by the weighted average number of common shares outstanding during the period. Diluted net income per share is computed by dividing the net income attributable to common shareholders by the weighted average number of common shares that would have been outstanding during the period assuming the issuance of common shares for all potential dilutive common shares outstanding using the treasury stock method. Dilutive potential common shares outstanding include outstanding stock options and restricted stock units.

The following is a reconciliation of the weighted average number of common shares outstanding used in calculating basic and diluted net income per share (in thousands, except share and per share data):

	Three Months Ended September 30,		Six Months Ended September 30,	
	2009	2008	2009	2008
Numerator:				
Net income	\$ 3,197	\$ 3,297	\$ 6,953	\$ 6,073
Denominator:				
Weighted average common shares outstanding basic	22,005,000	21,779,000	21,985,000	21,757,000
Weighted average effect of dilutive securities:				
Stock options	427,000	509,000	397,000	549,000
Restricted stock units	142,000	16,000	110,000	57,000
Weighted average common shares outstanding diluted	22,574,000	22,304,000	22,492,000	22,363,000
Net income per share:				
Basic net income per share	\$ 0.15	\$ 0.15	\$ 0.32	\$ 0.28
Diluted net income per share	\$ 0.14	\$ 0.15	\$ 0.31	\$ 0.27

Table of Contents

We excluded the following stock options from the computation of diluted weighted average shares outstanding because the exercise price of the stock options is greater than the average market price of our common stock during the period and, therefore, the inclusion of these stock options would be antidilutive to net income per share:

	Three Months Ended September 30,		Six Months Ended September 30,	
	2009	2008	2009	2008
Weighted average number of shares underlying antidilutive stock options		159,000	159,000	
Weighted average exercise price per share underlying antidilutive stock options	N/A	\$ 21.65	\$ 21.65	N/A

We excluded the following restricted stock units from the computation of diluted weighted average shares outstanding because the inclusion of these awards would be antidilutive to net income per share:

	Three Months Ended September 30,		Six Months Ended September 30,	
	2009	2008	2009	2008
Weighted average number of shares underlying antidilutive restricted stock units	64,000	375,000	206,000	178,000

NOTE 11. INCOME TAXES

Our effective tax rate for the three months ended September 30, 2009 and 2008 was 39% and 36%, respectively, and for the six months ended September 30, 2009 and 2008 was 40% and 37%, respectively.

The increase in the effective tax rate for the three and six months ended September 30, 2009, as compared to the three and six months ended September 30, 2008, was primarily due to an increase in non-deductible share-based compensation expense and a change in our investment portfolio, and partially offset by an increase in federal research and development tax credits and tax benefits for federal qualified production activities.

We did not have any unrecognized tax benefits as of September 30, 2009 or September 30, 2008. During the three and six months ended September 30, 2009 and 2008, we did not recognize any interest or penalties related to unrecognized tax benefits.

NOTE 12. COMPREHENSIVE INCOME

The following is a summary of comprehensive income for the three and six months ended September 30, 2009 and 2008 (in thousands):

	Three Months Ended September 30,		Six Months Ended September 30,	
	2009	2008	2009	2008
Net income	\$3,197	\$3,297	\$6,953	\$6,073
Other comprehensive income:				
Change in unrealized gain (loss) on investments, net of tax	8	939	(3)	1,022
Comprehensive income	\$3,205	\$4,236	\$6,950	\$7,095

NOTE 13. SEGMENT REPORTING INFORMATION

Operating segments are defined as components of an enterprise about which separate financial information is available that is evaluated regularly by our chief operating decision maker, or decision making group, in deciding how to allocate resources and in assessing performance.

Abaxis develops, manufactures, markets and sells portable blood analysis systems for use in the human or veterinary patient-care setting to provide clinicians with rapid blood constituent measurements. We identify our reportable segments as those customer groups that represent more than 10% of our combined revenue or gross profit or loss of all reported operating segments. We manage our business on the basis of the following two reportable segments: (i) the medical market and (ii) the veterinary market, which are based on the products sold by market and customer group. Each reportable segment has similar manufacturing processes, technology and shared infrastructures. The accounting policies for segment reporting are the same as for the Company as a whole. Assets are not segregated by segments since our chief operating decision maker does not use assets as a basis to evaluate a segment's performance.

Medical Market

In the medical market reportable segment, we serve a worldwide customer group consisting of military installations (ships, field hospitals and mobile care units), physicians office practices across all specialties, urgent care and walk-in clinics (free-standing or hospital-connected), home care providers (national, regional or local), nursing homes, ambulance companies, oncology treatment clinics, hospital labs and draw stations. The products manufactured and sold in this segment primarily consist of Piccolo chemistry analyzers and medical reagent discs.

Table of Contents**Veterinary Market**

In the veterinary market reportable segment, we serve a worldwide customer group consisting of companion animal hospitals, animal clinics with mixed practices of small animals, birds and reptiles, equine and bovine practitioners, veterinary emergency clinics, veterinary referral hospitals, universities, government, pharmaceutical companies, biotechnology companies and private research laboratories. The products manufactured and sold in this segment primarily consist of VetScan chemistry analyzers and veterinary reagent discs. We also sell OEM supplied products in this segment consisting primarily of hematology instruments and hematology reagent kits. Starting in the fourth quarter of fiscal 2009, OEM supplied products also included coagulation analyzers, coagulation cartridges and canine heartworm rapid tests. Starting in fiscal 2010, OEM supplied products also included i-STAT analyzers and cartridges. The table below summarizes revenues, cost of revenues and gross profit from our two operating segments and from certain unallocated items for the three and six months ended September 30, 2009 and 2008 (in thousands):

	Three Months Ended September 30,		Six Months Ended September 30,	
	2009	2008	2009	2008
Revenues:				
Medical Market	\$ 6,345	\$ 6,015	\$ 12,108	\$ 12,544
Veterinary Market	21,684	19,945	43,507	36,558
Other(1)	2,233	1,728	4,272	3,158
Total revenues	30,262	27,688	59,887	52,260
Cost of revenues:				
Medical Market	2,723	2,998	5,354	6,224
Veterinary Market	8,321	8,240	17,038	15,283
Other(1)	1,367	1,108	2,489	1,908
Total cost of revenues	12,411	12,346	24,881	23,415
Gross profit:				
Medical Market	3,622	3,017	6,754	6,320
Veterinary Market	13,363	11,705	26,469	21,275
Other(1)	866	620	1,783	1,250
Gross profit	\$ 17,851	\$ 15,342	\$ 35,006	\$ 28,845

(1) Represents unallocated items, not specifically identified to any particular business segment.

NOTE 14. REVENUES BY PRODUCT CATEGORY AND GEOGRAPHIC REGION AND SIGNIFICANT CONCENTRATIONS
Revenue Information

The following is a summary of our revenues by product category (in thousands):

Revenues by Product Category	Three Months Ended September 30,		Six Months Ended September 30,	
	2009	2008	2009	2008
Instruments(1)	\$ 6,553	\$ 6,892	\$12,830	\$14,694
Consumables(2)	20,983	18,734	41,888	33,627
Other products	1,807	1,317	3,446	2,427
Product sales, net	29,343	26,943	58,164	50,748
Development and licensing revenue	919	745	1,723	1,512
Total revenues	\$30,262	\$27,688	\$59,887	\$52,260

- (1) Instruments include chemistry analyzers, hematology instruments, coagulation analyzers and i-STAT analyzers.
- (2) Consumables include reagent discs, hematology reagent kits, coagulation cartridges, i-STAT cartridges and canine heartworm rapid tests.

Table of Contents

The following is a summary of revenues by geographic region based on customer location (in thousands):

Revenues by Geographic Region	Three Months Ended September 30,		Six Months Ended September 30,	
	2009	2008	2009	2008
North America	\$24,774	\$22,413	\$48,885	\$42,708
Europe	4,454	4,410	8,849	7,795
Asia Pacific and rest of the world	1,034	865	2,153	1,757
Total revenues	\$30,262	\$27,688	\$59,887	\$52,260

Significant Concentrations

Revenues from significant customers as a percentage of total revenues were as follows:

Distributor	Geographical Location	Three Months Ended September 30,		Six Months Ended September 30,	
		2009	2008	2009	2008
Walco International, Inc., d/b/a DVM Resources	United States	10%	11%	10%	<10%

During the six months ended September 30, 2008, there were no distributors or direct customers that accounted for more than 10% of our total worldwide revenues.

At September 30, 2009, one distributor in the United States accounted for 12% of our total accounts receivable balance. At September 30, 2008, one distributor in the United States accounted for 13% of our total accounts receivable balance.

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations
FORWARD-LOOKING STATEMENTS

This Management's Discussion and Analysis of Financial Condition and Results of Operations includes a number of forward-looking statements, which reflect Abaxis' current views with respect to future events and financial performance. In this report, the words will, anticipates, believes, expects, intends, plans, future, projects, would, may, could, should, might, and similar expressions identify forward-looking statements. These forward-looking statements are subject to certain risks and uncertainties, including but not limited to those discussed below, in Part II, Item 1A of this report and in Part I, Item 1A of our most recent Annual Report on Form 10-K filed with the Securities and Exchange Commission (the "SEC"), that could cause actual results to differ materially from historical results or those anticipated. Such risks and uncertainties include, but are not limited to, the market acceptance of our products and the continuing development of our products, regulatory clearance and approvals required by the United States Food and Drug Administration ("FDA") and other government regulatory authorities, risks associated with manufacturing and distributing our products on a commercial scale, free of defects, risks related to the introduction of new instruments manufactured by third parties, risks associated with entering the human diagnostic market on a larger scale, risks related to the protection of Abaxis' intellectual property or claims of infringement of intellectual property asserted by third parties, risks involved in carrying of inventory, risks associated with the ability to attract, train and retain competent sales personnel, general market conditions and competition. Readers are cautioned not to place undue reliance on these forward-looking statements, which speak only as of the date hereof. Abaxis assumes no obligation to update any forward-looking statements as circumstances change.

BUSINESS OVERVIEW

Abaxis, Inc. ("Abaxis," "us" or "we") was incorporated in California in 1989. Our principal offices are located at 3240 Whipple Road, Union City, California 94587. Our telephone number is (510) 675-6500 and our Internet address is www.abaxis.com. We make available free of charge on or through our Internet website our annual reports on Form

10-K, quarterly reports on Form 10-Q, current reports on Form 8-K and all amendments to those reports as soon as reasonably practicable after such material is electronically filed with or furnished to the SEC. Our common stock trades on the NASDAQ Global Market under the symbol ABAX.

We develop, manufacture, market and sell portable blood analysis systems for use in the human or veterinary patient-care setting to provide clinicians with rapid blood constituent measurements. Our primary product is a blood analysis system, consisting of a compact portable analyzer and a series of single-use plastic discs, called reagent discs, containing all the chemicals required to perform a panel of up to 14 tests on human patients and 13 tests on veterinary patients. We manufacture the system in our manufacturing facility in Union City, California and we market our blood chemistry analyzers in both the medical market and in the veterinary market, as described below.

Medical Market: We currently market the blood analysis system in the medical market under the name Piccolo[®] xpress. Through October 2006, we marketed the blood analysis system in the medical market as the Piccolo[®], now referred to as the Piccolo Classic. We continue to support and service our current population of Piccolo xpress and Piccolo Classic chemistry analyzers.

Table of Contents

Veterinary Market: We currently market the blood analysis system in the veterinary market under the name VetScan VS2®. Through March 2006, we marketed the blood analysis system in the veterinary market as the VetScan®, now referred to as the VetScan Classic. We continue to support and service our current population of VetScan VS2 and VetScan Classic chemistry analyzers.

In September 2007, we introduced a veterinary hematology instrument under the name VetScan HM5. The VetScan HM5 offers a 22-parameter complete blood count (CBC) analysis, including a five-part differential cell counter specifically designed for veterinary applications. In May 2004, we introduced a veterinary hematology instrument that offers an 18-parameter CBC analysis, including a three-part white blood cell differential, marketed originally as the VetScan HMII, and is now referred to as the VetScan HM2. We currently purchase the hematology instruments from Diatron Medical Instruments PLC. of Budapest, Hungary. Through April 2004, we marketed a veterinary hematology instrument under the name VetScan HMT. We continue to support and service our current population of VetScan HM5, VetScan HM2, VetScan HMII and VetScan HMT hematology instruments. We also market reagent kits to be used with our hematology instruments which we currently purchase from three suppliers: Clinical Diagnostic Solutions, Inc., Diatron Medical Instruments PLC. and Mallinckrodt Baker BV.

In July 2008, our sales office in Darmstadt, Germany was incorporated as Abaxis Europe GmbH to market, promote and distribute diagnostic systems for medical and veterinary uses. As a result, Abaxis Europe GmbH became a wholly-owned subsidiary of Abaxis. The subsidiary was formed to provide customer support in a timely manner in response to the growing and increasingly diverse services needs of customers in the European market.

In January 2009, we introduced a veterinary coagulation analyzer under the name VetScan VSpro. The VetScan VSpro assists in the diagnosis and evaluation of suspected bleeding disorders, toxicity/poisoning, evaluation of Disseminated Intravascular Disease, hepatic disease and monitoring therapy and progression of disease states. The point-of-care coagulation analyzer is offered with a combination assay (PT/aPTT test cartridge) for canine testing. We currently purchase the coagulation analyzers and coagulation cartridges from Scandinavian Micro Biodevices APS of Farum, Denmark.

In January 2009, we introduced a canine heartworm rapid test under the name VetScan Canine Heartworm Rapid Test. The VetScan Canine Heartworm Rapid Test is a highly sensitive and specific test for the detection of *Dirofilaria immitis* in canine whole blood, serum or plasma. The lateral flow immunoassay technology in the canine heartworm rapid tests provides immediate results.

In May 2009, we entered into an exclusive license agreement with Abbott Point of Care Inc., granting us the right to sell and distribute Abbott's i-STAT® 1 handheld instrument (i-STAT 1 analyzer) and associated consumables (for blood gas, electrolyte, basic blood chemistry and immunoassay testing) in the animal health care market worldwide. Our right to sell and distribute these products is initially non-exclusive, but becomes exclusive in all countries of the world, except for Japan, on November 1, 2009. Our rights in Japan remain non-exclusive for the term of the agreement. The initial term of the agreement ends on December 31, 2014, and after this initial term, our agreement continues automatically for successive one-year periods unless terminated by either party. We started marketing and sales activities of the i-STAT cartridges in the first quarter of fiscal 2010. In the second quarter of fiscal 2010, we started marketing and sales activities of the i-STAT instrument in its current version. We expect to launch an Abaxis-branded version of the i-STAT 1 instrument as part of our VetScan line in the second half of fiscal 2010. Our sales for any future periods are not predictable with a significant degree of certainty, and may depend on a number of factors outside of our control, including but not limited to inventory or timing considerations by our distributors. We generally operate with a limited order backlog because our products are typically shipped shortly after orders are received. As a result, product sales in any quarter are generally dependent on orders booked and shipped in that quarter. Our expense levels, which are to a large extent fixed, are based in part on our expectations of future revenues. Accordingly, we may be unable to adjust spending in a timely manner to compensate for any unexpected revenue shortfall. As a result, any such shortfall would negatively affect our operating results and financial condition. In addition, our sales may be adversely impacted by pricing pressure from competitors. Our ability to be consistently profitable will depend, in part, on our ability to increase the sales volumes of our Piccolo and VetScan products and to successfully compete with other competitors. We believe that period to period comparisons of our results of operations are not necessarily meaningful indicators of future results.

CRITICAL ACCOUNTING POLICIES, ESTIMATES AND JUDGMENTS

Our consolidated financial statements are prepared in accordance with accounting principles generally accepted in the United States and pursuant to the rules and regulations of the SEC. The preparation of these financial statements requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and revenues and expenses during the reporting period. On an on-going basis, we evaluate our estimates and the sensitivity of these estimates to deviations in the assumptions used in making them. We base our estimates on historical experience and on various other assumptions that are believed to be reasonable under the circumstances. However, there can be no assurance that our actual results will not differ from these estimates.

Table of Contents

We have identified the policies below as critical because they are not only important to understanding our financial condition and results of operations, but also because application and interpretation of these policies requires both judgment and estimates of matters that are inherently uncertain and unknown. Accordingly, actual results may differ materially from our estimates. The impact and any associated risks related to these policies on our business operations are discussed below. A more detailed discussion on the application of these and other accounting policies are included in our Annual Report on Form 10-K for the fiscal year ended March 31, 2009.

Revenue Recognition and Deferred Revenue. Our primary customers are distributors and direct customers in both the medical and veterinary markets. Revenues from product sales, net of estimated sales allowances and rebates, are recognized when (i) evidence of an arrangement exists, (ii) upon shipment of the products to the customer, (iii) the sales price is fixed or determinable and (iv) collection of the resulting receivable is reasonably assured. Rights of return are not provided.

We recognize revenue associated with extended maintenance agreements ratably over the life of the contract. Amounts collected in advance of revenue recognition are recorded as a current or non-current liability based on the time from the balance sheet date to the future date of revenue recognition. We provide incentives in the form of free goods or extended maintenance agreements to customers in connection with the sale of our instruments. Revenues from such sales are allocated separately to the instruments and incentives based on the relative fair value of each element. Revenues allocated to incentives are deferred until the goods are shipped to the customer or are recognized ratably over the life of the maintenance contract.

We periodically offer trade-in programs to customers for trading in an existing instrument to purchase a new instrument and we will either provide incentives in the form of free goods or reduce the sales price of the instrument. These incentives in the form of free goods are recorded according to the policies described above.

Distributor and Customer Rebates. We offer distributor pricing rebates and customer incentives from time to time. The distributor pricing rebates are offered to distributors upon meeting the sales volume requirements during a qualifying period. The distributor pricing rebates are recorded as a reduction to gross revenues during a qualifying period. Cash rebates are offered to distributors or customers who purchase certain products or instruments during a promotional period. Cash rebates are recorded as a reduction to gross revenues.

Sales and Other Allowances. We estimate a provision for defective reagent discs as part of sales allowances when we issue credits to customers for defective reagent discs. We also establish, upon shipment of our products to distributors, a provision for potentially defective reagent discs, based on estimates derived from historical experience. The provision for potentially defective reagent discs was recorded in sales allowances, using internal data available to estimate the level of inventory in the distribution channel, the lag time for customers to report defective reagent discs and the historical rates of defective reagent discs. Starting on July 1, 2007, the provision for potentially defective reagent discs is recorded as part of warranty reserves, instead of sales allowances, since we replace defective reagent discs rather than issue a credit to customers. Changes in our estimates for accruals related to provisions for defective reagent discs have not been material to our financial position or results of operations. In the future, the actual defective reagent discs may exceed our estimates, which could adversely affect our financial results.

Allowance for Doubtful Accounts. We maintain an allowance for doubtful accounts based on our assessment of the collectability of the amounts owed to us by our customers. In determining the amount of the allowance, we make judgments about the creditworthiness of customers which is mostly determined by the customer's payment history and the outstanding period of accounts. We specifically identify amounts that we believe to be uncollectible and the allowance for doubtful accounts is adjusted accordingly. An additional allowance is recorded based on certain percentages of our aged receivables, using historical experience to estimate the potential uncollectible and our assessment of the general financial condition of our customer base. If our actual collections experience changes, revisions to our allowances may be required, which could adversely affect our operating income.

Fair Value Measurements. On April 1, 2008, we adopted amendments to the accounting standard addressing the measurement of the fair value of financial assets and financial liabilities. The amendments provide guidance on defining fair value as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The amendments establish a fair value hierarchy that distinguishes between (1) market participant assumptions developed based on market data obtained from independent

sources (observable inputs) and (2) an entity's own assumptions about market participant assumptions developed based on the best information available in the circumstances (unobservable inputs). The fair value hierarchy consists of three broad levels, which gives the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3). The three levels of the fair value hierarchy are described below:

Level 1: Quoted prices (unadjusted) in active markets for identical assets or liabilities. As of September 30, 2009, we used Level 1 assumptions for our cash equivalents, which are traded in an active market. The valuations are based on quoted prices of the underlying security that are readily and regularly available in an active market, and accordingly, a significant degree of judgment is not required.

Table of Contents

Level 2: Directly or indirectly observable inputs as of the reporting date through correlation with market data, including quoted prices for similar assets and liabilities in active markets and quoted prices in markets that are not active. Level 2 also includes assets and liabilities that are valued using models or other pricing methodologies that do not require significant judgment since the input assumptions used in the models, such as interest rates and volatility factors, are corroborated by readily observable data from actively quoted markets for substantially the full term of the financial instrument. As of September 30, 2009, the fair value of our Level 2 financial assets is based on quoted prices for identical instruments in less active markets or using other observable market inputs for comparable instruments.

Level 3: Unobservable inputs that are supported by little or no market data and require the use of significant management judgment. These values are generally determined using pricing models for which the assumptions utilize management's estimates of market participant assumptions. As of September 30, 2009, we did not have any Level 3 financial assets or liabilities.

Fair value is a market-based measure considered from the perspective of a market participant who holds the asset or owes the liability rather than an entity-specific measure. Therefore, even when market assumptions are not readily available, our own assumptions are developed to reflect those that market participants would use in pricing the asset or liability at the measurement date.

Warranty Reserves. We provide for the estimated future costs to be incurred under our standard warranty obligation on our instruments. Our standard warranty obligation on instruments ranges from two to three years. The estimated contractual warranty obligation is recorded when the related revenue is recognized and any additional amount is recorded when such cost is probable and can be reasonably estimated. While we engage in product quality programs and processes, including monitoring and evaluating the quality of our suppliers, our estimated accrual for warranty exposure is based on historical experience, estimated product failure rates, material usage and freight incurred in repairing the instrument after failure and known design changes.

A provision for defective reagent discs is recorded when the related sale is recognized and any additional amount is recorded when such cost is probable and can be reasonably estimated, at which time they are included in cost of revenues. The warranty cost includes the replacement costs and freight of a defective reagent disc.

We analyze the adequacy of the ending accrual balance of warranty reserves each quarter. The determination of warranty reserves requires us to make estimates of the expected costs to repair or replace the instruments and to replace defective reagent discs under warranty. If actual repair or replacement costs of instruments or replacement costs of reagent discs differ significantly from our estimates, adjustments to cost of revenues may be required.

Inventories. We state inventories at the lower of cost or market, cost being determined using standard costs which approximates actual costs using the first-in, first-out (FIFO) method. Inventories include material, labor and overhead. We establish provisions for excess, obsolete and unusable inventories after evaluation of future demand and market conditions. If future demand or actual market conditions are less favorable than those estimated by management or if a significant amount of the material were to become unusable, additional inventory write-downs may be required, which would have a negative effect on our operating income.

Valuation of Long-Lived Assets. The carrying value of our long-lived assets, such as property and equipment and amortized intangible assets, are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable, in accordance with guidance on the accounting for impairment or disposal of long-lived assets. We look to current and future profitability, as well as current and future undiscounted cash flows, excluding financing costs, as primary indicators of recoverability. An impairment loss would be recognized when the sum of the undiscounted future net cash flows expected to result from the use of the asset and its eventual disposal is less than the carrying amount. If impairment is determined to exist, any related impairment loss is calculated based on fair value.

Income Taxes. We account for income taxes using the liability method under which deferred tax assets and liabilities are determined based on the differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases. Deferred tax assets and liabilities are measured using enacted tax rates expected to apply to taxable income in the years in which those temporary differences are expected to be recovered or settled. Valuation allowances are established, when necessary, to reduce deferred tax assets to the amounts to be recovered.

On April 1, 2007, we adopted amendments to the accounting standard addressing the provisions of accounting for uncertainty in income taxes. The amendments provide guidance on the accounting for uncertainty in income taxes recognized in the consolidated financial statements and prescribe a recognition threshold and measurement attribute for the financial statement recognition and measurement of tax positions taken or expected to be taken in a tax return. The amendments also provide guidance on derecognition, classification, interest and penalties, accounting in interim periods, disclosure and transition. Our policy to include interest and penalties related to gross unrecognized tax benefits within our provision for income taxes did not change despite the adoption of these amendments.

Table of Contents

Share-Based Compensation Expense. On April 1, 2006, we adopted the amendments to the accounting standard addressing the fair value provisions of share-based payment. We recognize share-based compensation expense, net of an estimated forfeiture rate, over the requisite service period of the award to employees and directors. We did not grant stock options during fiscal 2007, 2008 or 2009, or during the six months ended September 30, 2009. For stock options granted prior to March 31, 2006, we use the Black-Scholes option pricing model to determine the fair value. Determining the appropriate fair value model and calculating the fair value of share-based awards requires highly subjective assumptions, as described below.

Risk-free interest rate: The risk-free interest rate is based on U.S. Treasury yields in effect at the time of grant for the expected term of the option.

Expected stock price volatility: We estimate the volatility of our common stock at the date of grant based on the historical volatility of our common stock.

Expected term: We estimate the expected term of stock options granted based on historical exercise and post-vesting termination patterns, which we believe are representative of future behavior.

Expected dividends: We have not paid cash dividends on our common stock and we do not anticipate paying cash dividends in the foreseeable future; consequently, we use an expected dividend yield of zero.

For restricted stock units, the assumptions to calculate compensation expense is based on the fair value of our stock at the grant date. As a result, if factors change and we use different assumptions, our share-based compensation expense could be materially different in the future.

As required by fair value provisions of share-based compensation, employee share-based compensation expense recognized is calculated over the requisite service period of the awards and reduced for estimated forfeitures. The forfeiture rate is estimated based on historical data of our share-based compensation awards that are granted and cancelled prior to vesting and upon historical experience of employee turnover. Changes in estimated forfeiture rates and differences between estimated forfeiture rates and actual experience may result in significant, unanticipated increases or decreases in share-based compensation expense from period to period. To the extent we revise our estimate of the forfeiture rate in the future, our share-based compensation expense could be materially impacted in the quarter of revision, as well as in following quarters.

RESULTS OF OPERATIONS

We develop, manufacture, market and sell portable blood analysis systems for use in the human or veterinary patient-care setting to provide clinicians with rapid blood constituent measurements. We operate in two segments: (i) the medical market and (ii) the veterinary market. See Segment Results in this section for a detailed discussion.

Table of Contents**Total Revenues**

Revenues by Geographic Region and by Product Category. Revenues by geographic region based on customer location and revenues by product category during the three and six months ended September 30, 2009 and 2008 were as follows (in thousands, except percentages):

Revenues by Geographic Region	Three Months Ended September 30,				Six Months Ended September 30,			
	2009	2008	Change Increase/Percent (Decrease)Change		2009	2008	Change Increase/Percent (Decrease)Change	
North America	\$24,774	\$22,413	\$2,361	11%	\$48,885	\$42,708	\$6,177	14%

Three Months Ended September 30, 2009 Compared to Three Months Ended September 30, 2008

North America. During the three months ended September 30, 2009, total revenues in North America increased 11%, or \$2.4 million, as compared to the three months ended September 30, 2008. The increase in total revenues in North America was attributed to the following:

Medical reagent discs sales in North America (excluding the U.S. government) increased 9%, or \$270,000, primarily due to an increase in units sold resulting from an expanded installed base of our Piccolo chemistry analyzers.

Veterinary reagent discs sales in North America increased 9%, or \$884,000, primarily due to higher average selling prices.

Total sales from our original equipment manufacturing (OEM) supplied products, which include our (a) VetScan VS*pro* coagulation analyzers and related consumables, which we launched in our fourth quarter of fiscal 2009, (b) i-STAT analyzers and related consumables, which we launched in our fiscal 2010, and (c) canine heartworm rapid tests, which we launched in our fourth quarter of fiscal 2009, were \$1.5 million in North America during the three months ended September 30, 2009.

Revenues from other products in North America increased 37%, or \$455,000. The net increase was primarily due to (a) a decrease in maintenance contracts offered to customers from time to time as incentives in the form of free goods in connection with the sale of our products, for which revenue is deferred and recognized ratably over the life of the maintenance contract and (b) an increase in demand for products using the Orbos® Discrete Lyophilization Process, which is strongly affected by seasonal demands.

Revenues from development and licensing in North America increased 23%, or \$174,000, primarily due to royalties from a licensing agreement related to our proprietary technology, the Orbos Discrete Lyophilization Process.

The net increase in total revenues in North America was partially offset by the following:

Sales of our Piccolo chemistry analyzers in North America (excluding the U.S. government) decreased 35%, or \$483,000, primarily due to inventory stock adjustments by distributors during the three months ended September 30, 2009.

Table of Contents

Sales of our VetScan chemistry analyzers in North America decreased 19%, or \$427,000, primarily due to unfavorable economic conditions and the resulting impact of reduced capital spending at the veterinary clinic level as a result of the reduced availability of credit to customers.

Europe. During the three months ended September 30, 2009, total revenues in Europe increased 1%, or \$44,000, as compared to the three months ended September 30, 2008. The increase in total revenues in Europe was attributed to the following:

Medical reagent discs sales in Europe increased 154%, or \$407,000, primarily due to an increase in units sold to two distributors, which is based on the timing of inventory purchases during the three months ended September 30, 2009.

Sales of our VetScan chemistry analyzers in Europe increased 58%, or \$297,000, primarily due to the timing of inventory purchases by a distributor during the three months ended September 30, 2009.

Total sales of our VetScan hematology instruments and hematology reagent kits in Europe increased 35%, or \$70,000, during the three months ended September 30, 2009.

The net increase in total revenues in Europe was partially offset by a decrease in veterinary reagent discs sold in Europe of 27%, or \$835,000, primarily due to the timing of inventory purchases by a distributor during the three months ended September 30, 2008.

Significant concentration. One distributor in the United States, DVM Resources, accounted for 10% and 11% of our total worldwide revenues during the three months ended September 30, 2009 and 2008, respectively.

Six Months Ended September 30, 2009 Compared to Six Months Ended September 30, 2008

North America. During the six months ended September 30, 2009, total revenues in North America increased 14%, or \$6.2 million, as compared to the six months ended September 30, 2008. The increase in total revenues in North America was attributed to the following:

Medical reagent discs sales in North America (excluding the U.S. government) increased 10%, or \$573,000, primarily due to an increase in units sold resulting from an expanded installed base of our Piccolo chemistry analyzers.

Veterinary reagent discs sales in North America increased 23%, or \$4.3 million, primarily due to an increase in units sold resulting from an expanded installed base of our VetScan chemistry analyzers.

Sales of our hematology reagent kits in North America increased 24%, or \$474,000, primarily due to an increase in units sold resulting from an expanded installed base of our VetScan hematology instruments.

Total sales from our OEM supplied products, which include our (a) VetScan VS*pro* coagulation analyzers and related consumables, which we launched in our fourth quarter of fiscal 2009, (b) i-STAT analyzers and related consumables, which we launched in our fiscal 2010, and (c) canine heartworm rapid tests, which we launched in our fourth quarter of fiscal 2009, were \$3.0 million in North America during the six months ended September 30, 2009. Revenues from other products sold in North America increased 39%, or \$901,000. The net increase was primarily due to (a) a decrease in maintenance contracts offered to customers from time to time as incentives in the form of free goods in connection with the sale of our products, for which revenue is deferred and recognized ratably over the life of the maintenance contract and (b) an increase in demand for products using the Orbos Discrete Lyophilization Process, which is strongly affected by seasonal demands.

The net increase in total revenues in North America was partially offset by the following:

Sales of our Piccolo chemistry analyzers in North America (excluding the U.S. government) decreased 49%, or \$1.5 million, primarily due to inventory stock adjustments by distributors during the six months ended September 30, 2009.

Sales of our VetScan chemistry analyzers in North America decreased 27%, or \$1.3 million, primarily due to unfavorable economic conditions and the resulting impact of reduced capital spending at the veterinary clinic level as a result of the reduced availability of credit to customers.

Sales of our hematology instruments in North America decreased 10%, or \$311,000, primarily due to unfavorable economic conditions and the resulting impact of reduced capital spending at the veterinary clinic level as a result of the reduced availability of credit to customers.

Table of Contents

Europe. During the six months ended September 30, 2009, total revenues in Europe increased 14%, or \$1.1 million, as compared to the six months ended September 30, 2008. The increase in total revenues in Europe was attributed to the following:

Medical reagent discs sales in Europe increased 70%, or \$456,000, primarily due to an increase in units sold to two distributors, which is based on the timing of inventory purchases during the six months ended September 30, 2009.

Sales of our VetScan chemistry analyzers in Europe increased 29%, or \$375,000, primarily due to the timing of inventory purchases by a distributor during the six months ended September 30, 2009.

Total sales our VetScan hematology instruments and hematology reagent kits in Europe increased 51%, or \$190,000, during the six months ended September 30, 2009.

The net increase in total revenues in Europe was partially offset by a decrease in veterinary reagent discs sold in Europe of 3%, or \$147,000, primarily due to the timing of inventory purchases by a distributor during the six months ended September 30, 2008.

Significant concentration. One distributor in the United States, DVM Resources, accounted for 10% of our total worldwide revenues during the six months ended September 30, 2009. There were no distributors or direct customers that accounted for more than 10% of our total worldwide revenues during the six months ended September 30, 2008.

Segment Results**Three Months Ended September 30, 2009 Compared to Three Months Ended September 30, 2008**

The following table presents revenues, cost of revenues, gross profit and percent of revenues by operating segments for the three months ended September 30, 2009 and 2008 (in thousands, except percentages):

	Three Months Ended September 30,		Percent		Change	
	2009	Percent of Revenues(1)	2008	Percent of Revenues(1)	Increase/ (Decrease)	Percent Change
Revenues:						
Medical Market	\$ 6,345	100%	\$ 6,015	100%	\$ 330	5%
Percentage of total revenues	21%		22%

Medical Market

Revenues for Medical Market Segment

During the three months ended September 30, 2009, total revenues in the medical market increased 5%, or \$330,000, as compared to the three months ended September 30, 2008. Components of the change were as follows:

Instruments. Total revenues from sales of our Piccolo chemistry analyzers decreased 20%, or \$420,000, during the three months ended September 30, 2009, as compared to the three months ended September 30, 2008. The changes were primarily attributed to a

Table of Contents

decrease in revenues in North America (excluding the U.S. government) of 35%, or \$483,000, primarily due to inventory stock adjustments by distributors during the three months ended September 30, 2009.

Consumables. Total revenues from medical reagent discs increased 17%, or \$661,000, during the three months ended September 30, 2009, as compared to the three months ended September 30, 2008. The increase in revenues from medical reagent discs was primarily attributed to (a) an increase in revenues in North America (excluding the U.S. government) of 9%, or \$270,000, primarily due to an increase in units sold resulting from an expanded installed base of our Piccolo chemistry analyzers, and (b) an increase in revenues in Europe of 154%, or \$407,000, primarily due to an increase in units sold to two distributors, which is based on the timing of inventory purchases during the three months ended September 30, 2009.

Gross Profit for Medical Market Segment

Gross profit for the medical market segment increased 20%, or \$605,000, during the three months ended September 30, 2009, as compared to the three months ended September 30, 2008. Gross profit percentages for the medical market segment during the three months ended September 30, 2009 and 2008 were 57% and 50%, respectively. In absolute dollars, the increase in gross profit for the medical market segment was primarily due to (a) an increase in units of medical reagent discs sold during the three months ended September 30, 2009 and (b) lower manufacturing costs on Piccolo chemistry analyzers during the three months ended September 30, 2009.

Veterinary Market**Revenues for Veterinary Market Segment**

During the three months ended September 30, 2009, total revenues in the veterinary market increased 9%, or \$1.7 million, as compared to the three months ended September 30, 2008. Total revenues from veterinary instruments sold increased 2%, or \$81,000, during the three months ended September 30, 2009, as compared to the three months ended September 30, 2008. Total revenues from consumables in the veterinary market increased 11%, or \$1.6 million, during the three months ended September 30, 2009, as compared to the three months ended September 30, 2008.

Components of the change were as follows:

Sales of our VetScan chemistry analyzers decreased 6%, or \$170,000, during the three months ended September 30, 2009, as compared to the three months ended September 30, 2008. The decrease in revenues was primarily attributed to a decrease in revenues in North America of 19%, or \$427,000, primarily due to unfavorable economic conditions and the resulting impact of reduced capital spending at the veterinary clinic level as a result of the reduced availability of credit to customers, and partially offset by an increase in revenues in Europe of 58%, or \$297,000, primarily due to the timing of inventory purchases by a distributor during the three months ended September 30, 2009.

Total revenues from veterinary reagent discs increased 1%, or \$116,000, during the three months ended September 30, 2009, as compared to the three months ended September 30, 2008. The increase in revenues was primarily attributed to an increase in revenues in North America of 9%, or \$884,000, primarily due to higher average selling prices, and partially offset by a decrease in revenues in Europe of 27%, or \$835,000, primarily due to the timing of inventory purchases by a distributor during the three months ended September 30, 2008.

Total sales from our OEM supplied products, which include our (a) VetScan VS*pro* coagulation analyzers and related consumables, which we launched in our fourth quarter of fiscal 2009, (b) i-STAT analyzers and related consumables, which we launched in our fiscal 2010, and (c) canine heartworm rapid tests, which we launched in our fourth quarter of fiscal 2009, were \$1.6 million during the three months ended September 30, 2009, primarily in North America.

Gross Profit for Veterinary Market Segment

Gross profit for the veterinary market segment increased 14%, or \$1.7 million, during the three months ended September 30, 2009, as compared to the three months ended September 30, 2008. Gross profit percentages for the veterinary market segment during the three months ended September 30, 2009 and 2008 were 62% and 59%, respectively. In absolute dollars, the increase in gross profit for the veterinary market segment was primarily due to (a) an increase in units of hematology reagent kits sold during the three months ended September 30, 2009, (b) higher average selling prices of veterinary reagent discs sold during the three months ended September 30, 2009, and (c) lower manufacturing costs on VetScan chemistry analyzers and veterinary reagent discs sold during the three months

ended September 30, 2009. The increase was partially offset by a decrease in units of veterinary reagent discs sold during the three months ended September 30, 2009.

Table of Contents**Six Months Ended September 30, 2009 Compared to Six Months Ended September 30, 2008**

The following table presents revenues, cost of revenues, gross profit and percent of revenues by operating segments for the six months ended September 30, 2009 and 2008 (in thousands, except percentages):

		Six Months Ended September 30,			Change	
	2009	Percent of Revenues(1)	2008	Percent of Revenues(1)	Increase/ (Decrease)	Percent Change
Revenues:

identified to any particular business segment.

Medical Market

Revenues for Medical Market Segment

During the six months ended September 30, 2009, total revenues in the medical market decreased 3%, or \$436,000, as compared to the six months ended September 30, 2008. Components of the change were as follows:

Instruments. Total revenues from sales of our Piccolo chemistry analyzers decreased 30%, or \$1.4 million, during the six months ended September 30, 2009, as compared to the six months ended September 30, 2008. The changes were primarily attributed to a decrease in revenues in North America (excluding the U.S. government) of 49%, or \$1.5 million, primarily due to inventory stock adjustments by distributors during the six months ended September 30, 2009.

Consumables. Total revenues from medical reagent discs increased 13%, or \$952,000, during the six months ended September 30, 2009, as compared to the six months ended September 30, 2008. The increase in revenues from medical reagent discs was primarily attributed to (a) an increase in revenues in North America (excluding the U.S. government) of 10%, or \$573,000, primarily due to an increase in units sold resulting from an expanded installed base of our Piccolo chemistry analyzers, and (b) an increase in revenues in Europe of 70%, or \$456,000, primarily due to an increase in units sold to two distributors, which is based on the timing of inventory purchases during the six months ended September 30, 2009.

Gross Profit for Medical Market Segment

Gross profit for the medical market segment increased 7%, or \$434,000, during the six months ended September 30, 2009, as compared to the six months ended September 30, 2008. Gross profit percentages for the medical market segment during the six months ended September 30, 2009 and 2008 were 56% and 50%, respectively. In absolute dollars, the increase in gross profit for the medical market segment was primarily due to (a) an increase in units of medical reagent discs sold during the six months ended September 30, 2009 and (b) lower manufacturing costs on Piccolo chemistry analyzers during the six months ended September 30, 2009. The increase was partially offset by a decrease in units of Piccolo chemistry analyzers sold during the six months ended September 30, 2009.

Table of Contents**Veterinary Market****Revenues for Veterinary Market Segment**

During the six months ended September 30, 2009, total revenues in the veterinary market increased 19%, or \$6.9 million, as compared to the six months ended September 30, 2008. Total revenues from veterinary instruments sold decreased 4%, or \$447,000, during the six months ended September 30, 2009, as compared to the six months ended September 30, 2008. Total revenues from consumables in the veterinary market increased 28%, or \$7.3 million, during the six months ended September 30, 2009, as compared to the six months ended September 30, 2008.

Components of the change were as follows:

Sales of our VetScan chemistry analyzers decreased 14%, or \$851,000, during the six months ended September 30, 2009, as compared to the six months ended September 30, 2008. The decrease in revenues was primarily attributed to a decrease in revenues in North America of 27%, or \$1.3 million, primarily due to unfavorable economic conditions and the resulting impact of reduced capital spending at the veterinary clinic level as a result of the reduced availability of credit to customers, and partially offset by an increase in revenues in Europe of 29%, or \$375,000, primarily due to the timing of inventory purchases by a distributor during the six months ended September 30, 2009.

Total revenues from veterinary reagent discs increased 18%, or \$4.2 million, during the six months ended September 30, 2009, as compared to the six months ended September 30, 2008. The increase in revenues was primarily attributed to an increase in revenues in North America of 23%, or \$4.3 million, primarily due to an increase in units sold resulting from an expanded installed base of our VetScan chemistry analyzers, and partially offset by a decrease in revenues in Europe of 3%, or \$147,000, primarily due to the timing of inventory purchases by a distributor during the six months ended September 30, 2008.

Total sales from our OEM supplied products, which include our (a) VetScan VS*pro* coagulation analyzers and related consumables, which we launched in our fourth quarter of fiscal 2009, (b) i-STAT analyzers and related consumables, which we launched in our fiscal 2010, and (c) canine heartworm rapid tests, which we launched in our fourth quarter of fiscal 2009, were \$3.1 million during the six months ended September 30, 2009, primarily in North America.

Gross Profit for Veterinary Market Segment

Gross profit for the veterinary market segment increased 24%, or \$5.2 million, during the six months ended September 30, 2009, as compared to the six months ended September 30, 2008. Gross profit percentages for the veterinary market segment during the six months ended September 30, 2009 and 2008 were 61% and 58%, respectively. In absolute dollars, the increase in gross profit for the veterinary market segment was primarily due to (a) an increase in units of veterinary reagent discs and hematology reagent kits sold during the six months ended September 30, 2009, (b) higher average selling prices of veterinary reagent discs sold during the six months ended September 30, 2009, and (c) lower manufacturing costs on VetScan chemistry analyzers and veterinary reagent discs sold during the six months ended September 30, 2009.

Cost of Revenues

The following sets forth, our cost of revenues for the periods indicated (in thousands, except percentages):

	Three Months Ended September 30,		Change		Six Months Ended September 30,		Change	
	2009	2008	Increase/ (Decrease)	Percent Change	2009	2008	Increase/ (Decrease)	Percent Change
Cost of revenues	\$12,411	\$12,346	\$65	1%	\$24,881	\$23,415	\$1,466	6%
Percentage of total revenues	41%	45%			42%	45%		

Cost of revenues includes the costs associated with manufacturing, assembly, packaging, warranty repairs, test and quality assurance for our instruments and consumables and manufacturing overhead, including costs of personnel and equipment associated with manufacturing support.

Three and Six Months Ended September 30, 2009 Compared to Three and Six Months Ended September 30, 2008

The increase in cost of revenues, in absolute dollars, during the three months ended September 30, 2009, as compared to the three months ended September 30, 2008, was primarily due to sales from our OEM supplied products, which include our (a) VetScan VS*pro* coagulation analyzers and related consumables, which we launched in our fourth quarter of fiscal 2009, (b) i-STAT analyzers and related consumables, which we launched in our fiscal 2010, and (c) canine heartworm rapid tests, which we launched in our fourth quarter of fiscal 2009. The increase in cost of revenues was partially offset by (a) lower manufacturing costs on Piccolo chemistry analyzers, VetScan chemistry analyzers and veterinary reagent discs sold during the three months ended September 30, 2009 and (b) a decrease in the units of veterinary reagent discs sold during the three months ended September 30, 2009. As a percentage of total revenues, the decrease in cost of revenues during the three months ended September 30, 2009, as compared to the three months ended September 30, 2008, was primarily due to higher average selling prices of veterinary reagent discs sold during the three months ended September 30, 2009.

Table of Contents

The increase in cost of revenues, in absolute dollars, during the six months ended September 30, 2009, as compared to the six months ended September 30, 2008, was primarily due to sales from our OEM supplied products, which include our (a) VetScan V*Spro* coagulation analyzers and related consumables, which we launched in our fourth quarter of fiscal 2009, (b) i-STAT analyzers and related consumables, which we launched in our fiscal 2010, and (c) canine heartworm rapid tests, which we launched in our fourth quarter of fiscal 2009. The increase in cost of revenues was partially offset by (a) lower manufacturing costs on Piccolo chemistry analyzers, VetScan chemistry analyzers and veterinary reagent discs sold during the six months ended September 30, 2009 and (b) a decrease in Piccolo chemistry analyzers sold during the six months ended September 30, 2009. As a percentage of total revenues, the decrease in cost of revenues during the six months ended September 30, 2009, as compared to the six months ended September 30, 2008, was primarily due to higher average selling prices of veterinary reagent discs sold during the six months ended September 30, 2009.

Gross Profit

The following sets forth, our gross profit for the periods indicated (in thousands, except percentages):

	Three Months Ended September 30,		Change		Six Months Ended September 30,		Change	
	2009	2008	Increase/ (Decrease)	Percent Change	2009	2008	Increase/ (Decrease)	Percent Change
Total gross profit	\$17,851	\$15,342	\$2,509	16%	\$35,006	\$28,845	\$6,161	21%
Total gross margin	59%	55%			58%	55%		

Three and Six Months Ended September 30, 2009 Compared to Three and Six Months Ended September 30, 2008

The increase in gross profit, in absolute dollars, during the three months ended September 30, 2009, as compared to the three months ended September 30, 2008, was primarily due to (a) an increase in medical reagent discs sold during the three months ended September 30, 2009, (b) higher average selling prices of veterinary reagent discs sold during the three months ended September 30, 2009, (c) an increase in hematology reagent kits sold during the three months ended September 30, 2009, and (d) lower manufacturing costs on Piccolo chemistry analyzers, VetScan chemistry analyzers and veterinary reagent discs sold during the three months ended September 30, 2009. The increase was partially offset by a decrease in veterinary reagent discs sold during the three months ended September 30, 2009. As a percentage, the increase in gross margin during the three months ended September 30, 2009, as compared to the three months ended September 30, 2008, was primarily due to higher average selling prices of veterinary reagent discs sold during the three months ended September 30, 2009.

The increase in gross profit, in absolute dollars, during the six months ended September 30, 2009, as compared to the six months ended September 30, 2008, was primarily due to (a) an increase in medical reagent discs sold during the six months ended September 30, 2009, (b) higher average selling prices of veterinary reagent discs sold during the six months ended September 30, 2009, (c) an increase in veterinary reagent discs and hematology reagent kits sold during the six months ended September 30, 2009, and (d) lower manufacturing costs on Piccolo chemistry analyzers, VetScan chemistry analyzers and veterinary reagent discs sold during the six months ended September 30, 2009. The increase was partially offset by a decrease in Piccolo chemistry analyzers sold during the six months ended September 30, 2009. As a percentage, the increase in gross margin during the six months ended September 30, 2009, as compared to the six months ended September 30, 2008, was primarily due to higher average selling prices of veterinary reagent discs sold during the six months ended September 30, 2009.

Operating Expenses**Research and Development**

The following sets forth, our research and development expenses for the periods indicated (in thousands, except percentages):

	Three Months Ended		Change		Six Months Ended		Change	
	September 30,	September 30,	Increase/	Percent	September 30,	September 30,	Increase/	Percent
	2009	2008	(Decrease)	Change	2009	2008	(Decrease)	Change
Research and development expenses	\$2,594	\$2,082	\$512	25%	\$5,167	\$4,079	\$1,088	27%
Percentage of total revenues	9%	8%			9%	8%		

Research and development expenses consist of personnel costs (including salaries, benefits and share-based compensation expense), consulting expenses and materials and related expenses associated with the development of new tests and test methods, clinical trials, product improvements and enhancement of existing products.

Table of Contents**Three and Six Months Ended September 30, 2009 Compared to Three and Six Months Ended September 30, 2008**

The increase in research and development expenses, in absolute dollars, during the three and six months ended September 30, 2009, as compared to the three and six months ended September 30, 2008, was primarily due to new product development and enhancement of existing products and clinical trials. Research and development expenses are based on the project activities planned and the level of spending depends on budgeted expenditures. The projects primarily relate to new product development in both the medical and veterinary markets and costs related to compliance with FDA regulations and clinical trials. Share-based compensation expense during the three months ended September 30, 2009 and 2008 was \$214,000 and \$53,000, respectively, and during the six months ended September 30, 2009 and 2008 was \$354,000 and \$114,000, respectively.

We anticipate the dollar amount of research and development expenses to increase in fiscal 2010 from fiscal 2009 but remain consistent as a percentage of total revenues, as we complete new products for both the medical and veterinary markets. There can be no assurance, however, that we will undertake such research and development activities in future periods or, if we do, that such activities will be successful.

Sales and Marketing

The following sets forth, our sales and marketing expenses for the periods indicated (in thousands, except percentages):

	Three Months Ended September 30,		Change		Six Months Ended September 30,		Change	
	2009	2008	Increase/ (Decrease)	Percent Change	2009	2008	Increase/ (Decrease)	Percent Change
Sales and marketing expenses	\$7,582	\$6,494	\$1,088	17%	\$13,942	\$12,321	\$1,621	13%
Percentage of total revenues	25%	23%			23%	24%		

Sales and marketing expenses consist of personnel costs (including salaries, benefits and share-based compensation expense), commissions and travel-related expenses for personnel engaged in selling, costs associated with advertising, lead generation, marketing programs, trade shows and services related to customer and technical support.

Three and Six Months Ended September 30, 2009 Compared to Three and Six Months Ended September 30, 2008

The increase in sales and marketing expenses, in absolute dollars, during the three and six months ended September 30, 2009, as compared to the three and six months ended September 30, 2008, was primarily due to personnel-related costs resulting from (a) an increase in headcount in various divisions, including sales and marketing, customer service and technical service, to support the growth in both our medical and veterinary markets and (b) an increase in commission and bonus expenses, which are based on the achievement of established goals. Share-based compensation expense during the three months ended September 30, 2009 and 2008 was \$304,000 and \$121,000, respectively, and during the six months ended September 30, 2009 and 2008 was \$549,000 and \$258,000, respectively.

General and Administrative

The following sets forth, our general and administrative expenses for the periods indicated (in thousands, except percentages):

	Three Months Ended September 30,		Change		Six Months Ended September 30,		Change	
	2009	2008	Increase/ (Decrease)	Percent Change	2009	2008	Increase/ (Decrease)	Percent Change
	\$2,689	\$1,952	\$737	38%	\$5,187	\$3,614	\$1,573	44%

General and administrative expenses

Percentage of total revenues

9%

7%

9%

7%

General and administrative expenses consist of personnel costs (including salaries, benefits and share-based compensation expense), and expenses for outside professional services related to general corporate functions, including accounting, human resources and legal.

Three and Six Months Ended September 30, 2009 Compared to Three and Six Months Ended September 30, 2008

The increase in general and administrative expenses, in absolute dollars, during the three and six months ended September 30, 2009, as compared to the three and six months ended September 30, 2008, was primarily related to higher personnel-related costs, which includes (a) an increase in share-based compensation expense, primarily due to the time-based vesting schedule of restricted stock units awarded to employees, particularly in the fourth year of vesting, which vests at 70%, and (b) an increase in headcount to support the growth of our business. Share-based compensation expense during the three months ended September 30, 2009 and 2008 was \$764,000 and \$220,000, respectively, and during the six months ended September 30, 2009 and 2008 was \$1.2 million and \$388,000, respectively.

Table of Contents**Interest and Other Income (Expense), Net**

The following sets forth, our interest and other income (expense), net, for the periods indicated (in thousands, except percentages):

	Three Months Ended September 30,		Change		Six Months Ended September 30,		Change	
	2009	2008	Increase/ (Decrease)	Percent Change	2009	2008	Increase/ (Decrease)	Percent Change
Interest and other income (expense), net	\$292	\$326	\$(34)	(10)%	\$806	\$788	\$18	2%

Interest and other income (expense), net consists primarily of interest earned on cash, cash equivalents, short-term and long-term investments and foreign currency exchange gains and losses.

Three and Six Months Ended September 30, 2009 Compared to Three and Six Months Ended September 30, 2008

The decrease in interest and other income (expense), net, during the three months ended September 30, 2009, as compared to the three months ended September 30, 2008, was primarily attributed to lower interest yields in our investment portfolio, and partially offset by favorable foreign currency exchange rates, compared to the same period in fiscal 2009.

The increase in interest and other income (expense), net, during the six months ended September 30, 2009, as compared to the six months ended September 30, 2008, was primarily attributed to favorable foreign currency exchange rates, and partially offset by lower interest yields in our investment portfolio, compared to the same period in fiscal 2009.

Income Tax Provision

The following sets forth, our income tax provision for the periods indicated (in thousands, except percentages):

	Three Months Ended September 30,		Six Months Ended September 30,	
	2009	2008	2009	2008
Income tax provision	\$2,081	\$1,843	\$4,563	\$3,546
Effective tax rate	39%	36%	40%	37%

Three and Six Months Ended September 30, 2009 Compared to Three and Six Months Ended September 30, 2008

Our effective tax rate for the three months ended September 30, 2009 and 2008 was 39% and 36%, respectively, and for the six months ended September 30, 2009 and 2008 was 40% and 37%, respectively.

The increase in the effective tax rate for the three and six months ended September 30, 2009, as compared to the three and six months ended September 30, 2008, was primarily due to an increase in non-deductible share-based compensation expense and a change in our investment portfolio, and partially offset by an increase in federal research and development tax credits and tax benefits for federal qualified production activities.

We did not have any unrecognized tax benefits as of September 30, 2009 or September 30, 2008. During the three and six months ended September 30, 2009 and 2008, we did not recognize any interest or penalties related to unrecognized tax benefits.

LIQUIDITY AND CAPITAL RESOURCES

Total cash, cash equivalents and short-term and long-term investments at September 30, 2009 and March 31, 2009 were as follows (in thousands, except percentages):

September 30, 2009	March 31, 2009
---------------------------	-----------------------

Edgar Filing: ABAXIS INC - Form 10-Q

Cash and cash equivalents	\$ 51,579	\$49,237
Short-term investments	17,068	20,776
Long-term investments	18,926	4,886
Total cash, cash equivalents and investments	\$ 87,573	\$74,899
Percentage of total assets	57%	53%

Table of Contents**Cash Flow Changes**

Cash provided by (used in) the six months ended September 30, 2009 and 2008 were as follows (in thousands):

	Six Months Ended September 30,	
	2009	2008
Net cash provided by operating activities	\$ 13,236	\$ 6,731
Net cash (used in) provided by investing activities	(11,127)	7,496
Net cash provided by financing activities	134	3,151
Effect of exchange rate changes on cash and cash equivalents	99	(25)
 Net increase in cash and cash equivalents	 \$ 2,342	 \$17,353

At September 30, 2009, we had net working capital of \$97.8 million compared to \$101.8 million at March 31, 2009. Cash and cash equivalents at September 30, 2009 were \$51.6 million, compared to \$49.2 million at March 31, 2009. The increase in cash and cash equivalents during the six months ended September 30, 2009 was primarily due to net cash provided by operating activities of \$13.2 million and proceeds from maturities of investments and principal payments of asset-backed securities of \$13.2 million, partially offset by purchases of investments of \$23.6 million.

Operating Activities

During the six months ended September 30, 2009, we generated \$13.2 million in cash from operating activities. The cash provided by operating activities during the six months ended September 30, 2009 was primarily the result of net income of \$7.0 million, adjusted for the effects of non-cash adjustments including depreciation and amortization of \$2.6 million and share-based compensation expense of \$2.3 million.

Other changes in operating activities during the six months ended September 30, 2009 were as follows:

- (i) Net accounts receivables increased by \$429,000, from \$22.0 million at March 31, 2009 to \$22.4 million as of September 30, 2009, primarily due to higher sales in the last month of the quarter ended September 30, 2009.
- (ii) Net inventories increased by \$577,000, from \$15.7 million at March 31, 2009 to \$16.3 million as of September 30, 2009, primarily due to an increase in finished goods to support future demand.
- (iii) Prepaid expenses increased by \$510,000, from \$957,000 at March 31, 2009 to \$1.5 million as of September 30, 2009, primarily due to the timing of payments.
- (iv) Accounts payable increased by \$1.4 million, from \$4.0 million at March 31, 2009 to \$5.4 million as of September 30, 2009, primarily due to the timing and payment of services and inventory purchases.
- (v) Accrued payroll and related expenses increased by \$2.0 million, from \$3.7 million at March 31, 2009 to \$5.7 million as of September 30, 2009, primarily due to an increase in accrued bonus as of September 30, 2009, which was based on the achievement of established quarterly net sales and quarterly pre-tax income goals during the quarter.
- (vi) Accrued taxes increased by \$666,000, from \$34,000 at March 31, 2009 to \$700,000 as of September 30, 2009, primarily due to the utilization of all remaining federal net operating loss carryovers in the fiscal year ended March 31, 2009.

We anticipate that we will incur incremental additional costs to support our future operations, including further additional pre-clinical testing and clinical trials for our current and future products; research and design costs related to the continuing development of our current and future products; and acquisition of capital equipment for our manufacturing facility, which includes the ongoing costs related to the continuing development of our current and future products.

Investing Activities

Net cash used in investing activities during the six months ended September 30, 2009 totaled \$11.1 million, compared to net cash provided by investing activities of \$7.5 million during the six months ended September 30, 2008. Changes in investing activities were as follows:

Investments. Cash used to purchase investments in asset-backed securities, certificates of deposits, corporate bonds and U.S. agency securities totaled \$23.6 million during the six months ended September 30, 2009. Cash provided by

proceeds from (a) maturities of certificates of deposits totaled \$10.8 million and (b) principal payments of asset-backed securities totaled \$2.4 million, in each case during the six months ended September 30, 2009.

30

Table of Contents

Property and Equipment. Cash used to purchase property and equipment totaled \$739,000 during the six months ended September 30, 2009, primarily to support (a) sales and marketing activities and (b) more efficient production lines. We anticipate that we will continue to purchase property and equipment as necessary in the normal course of our business.

Financing Activities

Net cash provided by financing activities during the six months ended September 30, 2009 totaled \$134,000, primarily consisting of excess tax benefits from share-based awards of \$351,000 and proceeds from stock options exercised of \$205,000, partially offset by the payment of income withholding taxes of \$422,000 due upon vesting of restricted stock units.

Contractual Obligations

Purchase Commitments. In October 2008, we entered into an original equipment manufacturing (OEM) agreement with Scandinavian Micro Biodevices APS (SMB) of Denmark to purchase coagulation analyzers and coagulation cartridges. In the fourth quarter of fiscal 2009, we started marketing the products and, upon achievement of certain milestones by SMB outlined in the agreement, we will be subject to the minimum purchase commitments under the OEM agreement. These milestones have not yet been met and we are currently purchasing coagulation analyzers and coagulation cartridges on a purchase order basis, but all such purchases will count towards the minimum purchase obligations if and when they are triggered.

Patent License Agreement. Effective January 2009, we entered into a license agreement with Inverness Medical Switzerland GmbH (Inverness). Under our license agreement, we licensed co-exclusively certain worldwide patent rights related to lateral flow immunoassay technology in the field of animal health diagnostics in the professional marketplace. The license agreement provides that Inverness shall not grant any future rights to any third parties under its current lateral flow patent rights in the animal health diagnostics field in the professional marketplace. The license agreement enables us to develop and market products under rights from Inverness to address animal health and laboratory animal research markets.

In exchange for the license rights, we (i) paid an up-front license fee of \$5.0 million to Inverness in January 2009, (ii) agreed to pay royalties during the term of the agreement, based solely on sales of products in a jurisdiction country covered by valid and unexpired claims in that jurisdiction under the licensed Inverness patent rights, and (iii) agreed to pay a yearly minimum license fee of between \$500,000 to \$1.0 million per year, which fee will be creditable against any royalties due during such calendar year. The royalties, if any, are payable through the date of the expiration of the last valid patent licensed under the agreement that includes at least one claim in a jurisdiction covering products we sell in that jurisdiction. The yearly minimum fees are payable starting in fiscal 2011 for so long as we desire to maintain exclusivity under the agreement.

Line of Credit. We have a line of credit with Comerica Bank-California which provides for borrowings of up to \$2.0 million. The line of credit may be terminated upon notification by either party and any outstanding balance is payable upon demand. At September 30, 2009, there was no amount outstanding under our line of credit. Further information on our line of credit, including the terms and conditions with respect to our loan covenants, is set forth in Note 7 of the Notes to the Condensed Consolidated Financial Statements contained in this Quarterly Report on Form 10-Q.

Contingencies

We are involved from time to time in various litigation matters in the normal course of business. While the outcome of these proceedings and claims cannot be predicted with certainty, we do not currently believe that the ultimate resolution of these matters will have a material effect on our financial position or results of operations.

Off-Balance Sheet Arrangements

We have no off-balance sheet arrangements.

Financial Condition

We anticipate that our existing capital resources, available line of credit and anticipated revenues from the sales of our products will be adequate to satisfy our currently planned operating and financial requirements through at least the next 12 months. Our future capital requirements will largely depend upon the increased market acceptance of our point-of-care blood analyzer products. However, our sales for any future periods are not predictable with a significant

degree of certainty. Regardless, we may seek to raise additional funds to pursue strategic opportunities.

RECENT ACCOUNTING PRONOUNCEMENTS

A discussion of recent accounting pronouncements is included in Note 2 of the Notes to the Condensed Consolidated Financial Statements contained in this Quarterly Report on Form 10-Q.

Table of Contents**Item 3. Quantitative and Qualitative Disclosures About Market Risk****Interest Rate Risk**

We are exposed to the impact of interest rate changes with respect to our short-term and long-term investments and line of credit.

Our investment objective is to invest excess cash in cash equivalents and in various types of investments to maximize yields without significantly increased risk. At September 30, 2009, our short-term investments totaled \$17.1 million, consisting of asset-backed securities and certificates of deposits, and our long-term investments totaled \$18.9 million, consisting of certificates of deposits, corporate bonds and U.S. agency securities.

Historically, our investment portfolio had included auction rate securities, which became illiquid as a result of the negative condition in the global credit markets. In September 2008, the bank where our auction rate securities were held, reached agreements with the Financial Industry Regulatory Authority, the State of Michigan Attorney General and the Michigan Office of Financial and Insurance Regulation regarding the repurchase of auction rate securities. In October 2008, we received a commitment from our bank to repurchase all of our remaining auction rate securities, which repurchases were completed in the third quarter of fiscal 2009. During fiscal 2009, we redeemed \$37.0 million of our auction rate securities at 100% of par value. As of September 30, 2009, we no longer hold any auction rate securities.

We have the ability to hold the investments classified as held-to-maturity in our investment portfolio at September 30, 2009 until maturity and therefore, we believe we have no material exposure to interest rate risk. As of September 30, 2009, our short-term investment in asset-backed securities were classified as available-for-sale and, consequently, recorded at fair market value with unrealized gains or losses resulting from changes in fair value reported as a separate component of accumulated other comprehensive income, net of any tax effects, in stockholders' equity. A sensitivity analysis assuming a hypothetical 10% movement in interest rates applied to our total investment balances at September 30, 2009 indicated that such market movement would not have a material effect on our business, operating results or financial condition. We have not experienced any significant loss on our investment portfolio during either fiscal 2009 or during the six months ended September 30, 2009.

For our line of credit, which provides for borrowings of up to \$2.0 million, the interest rate is equal to the bank's prime rate minus 0.25%, which totaled 3.00% at September 30, 2009. Consequently, an increase in the prime rate would expose us to higher interest expenses. A sensitivity analysis assuming a hypothetical 10% movement in the prime rate applied to our line of credit balance at September 30, 2009 indicated that such market movement would not have a material effect on our business, operating results or financial condition, as there was no amount outstanding on our line of credit at September 30, 2009.

As a matter of management policy, we do not currently enter into transactions involving derivative financial instruments. In the event we do enter into such transactions in the future, such items will be accounted for in accordance with Accounting Standards Codification 815, Accounting for Derivatives and Hedging Activities.

Foreign Currency Rate Fluctuations

We operate primarily in the United States and a majority of our revenues, cost of revenues, operating expenses and capital purchasing activities are transacted in U.S. dollars. However, we are exposed to foreign currency exchange rate fluctuations on the hematology instruments and hematology reagent kits purchased from Diatron Messtechnik GmbH, which are primarily denominated in Euros.

In the first quarter of fiscal 2009, operations from our sales office in Darmstadt, Germany were stated in Euros and translated into U.S. dollars at the period-end exchange rates. In July 2008, the Germany sales office was incorporated as our wholly-owned subsidiary, Abaxis Europe GmbH, to market, promote and distribute diagnostic systems for medical and veterinary uses. Abaxis Europe GmbH's functional currency is in U.S. dollars. Foreign currency denominated account balances of our subsidiary are remeasured into U.S. dollars at the end-of-period exchange rates for monetary assets and liabilities, and historical exchange rates for nonmonetary assets. Accordingly, the effects of foreign currency transactions, and of remeasuring the financial condition into the functional currency, resulted in foreign currency gains and losses, which were included in Interest and other income (expense), net on our Condensed Consolidated Statements of Operations.

To the extent the U.S. dollar strengthens against the Euro currency, the translation of the foreign currency denominated transactions may result in reduced cost of revenues and operating expenses. Similarly, our cost of revenues and operating expenses will increase if the U.S. dollar weakens against the Euro currency.

Other than the foregoing, there have been no material changes in our market risk during the three months ended September 30, 2009 compared to the disclosures in Part II, Item 7A of our Annual Report on Form 10-K for the fiscal year ended March 31, 2009.

Table of Contents**Item 4. Controls and Procedures****Evaluation of Disclosure Controls and Procedures**

Based on our management's evaluation, with the participation of our principal executive officer and principal financial officer, as of the end of the period covered by this report, our principal executive officer and principal financial officer have concluded that our disclosure controls and procedures (which are defined under Securities and Exchange Commission rules as controls and other procedures of a company that are designed to ensure that information required to be disclosed by a company in the reports that it files or submits under the Securities Exchange Act of 1934, as amended, (the "Exchange Act") is recorded, processed, summarized and reported within required time periods), were effective as of September 30, 2009.

Changes in Internal Control over Financial Reporting

During the quarter ended September 30, 2009, there was no change in our internal control over financial reporting that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

Inherent Limitations on Controls and Procedures

A control system, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met. Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risks that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate. Accordingly, even an effective system of internal control will provide only reasonable assurance that the objectives of the internal control system are met.

Item 4T. Controls and Procedures

Not applicable.

PART II OTHER INFORMATION**Item 1. Legal Proceedings**

We are involved from time to time in various litigation matters in the normal course of business. We do not believe that the ultimate resolution of these matters will have a material effect on our financial position or results of operations.

Item 1A. Risk Factors**RISK FACTORS THAT MAY AFFECT OUR PERFORMANCE**

Our future performance is subject to a number of risks. If any of the following risks actually occur, our business could be harmed and the trading price of our common stock could decline.

When used in these risk factors, the words "anticipates," "believes," "continue," "could," "estimates," "expects," "future," "may," "might," "plans," "projects," "will" and similar expressions identify forward-looking statements. Our actual results differ materially from those that we project in the forward-looking statements as a result of factors that we have set forth throughout this document as well as factors of which we are currently not aware.

In evaluating our business, you should carefully consider the following risks in addition to the other information in our Annual Report on Form 10-K for the fiscal year ended March 31, 2009 as filed with the Securities and Exchange Commission on June 12, 2009. We note these factors for investors as permitted by the Private Securities Litigation Reform Act of 1995. It is not possible to predict or identify all such factors and, therefore, you should not consider the following risks to be a complete statement of all the potential risks or uncertainties that we face.

We are not able to predict sales in future quarters and a number of factors affect our periodic results, which makes our quarterly operating results less predictable.

We are not able to accurately predict our sales in future quarters. Our revenue in the medical and veterinary markets is derived primarily by selling to distributors who resell our products to the ultimate user. While we are better able to predict sales of our reagent discs, as we sell these discs primarily for use with blood chemistry analyzers that we sold in prior periods, we generally are unable to predict with much certainty sales of our blood chemistry analyzers, as we typically sell our blood chemistry analyzers to new users. Accordingly, our sales in any one quarter are not indicative of our sales in any future period.

Table of Contents

We generally operate with a limited order backlog, because we ship our products shortly after we receive the orders from our customers. As a result, our product sales in any quarter are generally dependent on orders that we receive and ship in that quarter. We base our expense levels, which are to a large extent fixed, in part on our expectations as to future revenues. We may be unable to reduce our spending in a timely manner to compensate for any unexpected revenue shortfall. As a result, any such shortfall would immediately materially and adversely impact our operating results and financial condition.

The sales cycle for our products can fluctuate, which may cause revenue and operating results to vary significantly from period to period. We believe this fluctuation is due primarily to (i) seasonal patterns in the decision making processes by our independent distributors and direct customers, (ii) inventory or timing considerations by our distributors and (iii) on the purchasing requirements of the U.S. Military to acquire our products. Accordingly, we believe that period to period comparisons of our results of operations are not necessarily meaningful.

In the future, our periodic operating results may vary significantly depending on, but not limited to, a number of factors, including:

- new product announcements made by us or our competitors;
- changes in our pricing structures or the pricing structures of our competitors;
- our ability to develop, introduce and market new products on a timely basis;
- our manufacturing capacities and our ability to increase the scale of these capacities;
- the mix of product sales between our blood chemistry analyzers and our reagent disc products;
- the amount we spend on research and development; and
- changes in our strategy.

We would fail to achieve anticipated revenue if the market does not accept our products.

We believe that our core compact blood chemistry analyzer product differs substantially from current blood chemistry analyzers on the market. Our primary competition is from centralized laboratories that offer a greater number of tests than our products, but do so at a greater overall cost and require more time. We also compete with other point-of-care analyzers that cost more, require more maintenance and offer a narrower range of tests. However, these point-of-care analyzers are generally marketed by larger companies which have greater resources for sales and marketing, in addition to a recognized brand name and established distribution relationships.

In the human medical market, we have relatively limited experience in large-scale sales of our Piccolo blood chemistry analyzers. Although we believe that our blood chemistry analyzers offer consumers many advantages, including substantial cost savings according to our analyses, in terms of implementation of the actual product, these advantages involve changes to current standard practices, such as using large clinical laboratories that will require changes in both the procedures and mindset of care providers. The human medical market in particular is highly regulated, structured, difficult to penetrate and often slow to adopt new product offerings. If we are unable to convince large numbers of medical clinics, hospitals and other point-of-care environments of the benefits of our Piccolo blood chemistry analyzers and our other products, we will suffer lost sales and could fail to achieve anticipated revenue. Historically, in the veterinary market, we have marketed our VetScan systems through both direct sales and distribution channels to veterinarians. We continue to develop new animal blood tests to expand our product offerings and we cannot be assured that these tests will be accepted by the veterinary market.

We rely on patents and other proprietary information, the loss of which would negatively affect our business.

As of September 30, 2009, 42 patent applications have been filed on our behalf with the United States Patent and Trademark Office (USPTO), of which 30 patents have been issued and 29 patents are currently active. Additionally, we have filed several international patent applications covering the same subject matter as our domestic applications. The patent position of any medical device manufacturer, including us, is uncertain and may involve complex legal and factual issues. Consequently, we may not be issued any additional patents, either domestically or internationally. Furthermore, our patents may not provide significant proprietary protection because there is a chance that they will be circumvented or invalidated. We cannot be certain that we were the first creator of the inventions covered by our issued patents or pending patent applications, or that we were the first to file patent applications for these inventions, because (1) the USPTO maintains all patent applications that are not filed in any foreign jurisdictions in secrecy until it issues the patents (unless a patent application owner files a request for publication) and (2) publications of

discoveries in the scientific or patent literature tend to lag behind actual discoveries by several months. We may

Table of Contents

have to participate in interference proceedings, which are proceedings in front of the USPTO, to determine who will be issued a patent. These proceedings could be costly and could be decided against us.

We also rely upon copyrights, trademarks and unpatented trade secrets. Others may independently develop substantially equivalent proprietary information and techniques that would undermine our proprietary technologies. Further, others may gain access to our trade secrets or disclose such technology. Although we require our employees, consultants and advisors to execute agreements that require that our corporate information be kept confidential and that any inventions by these individuals are property of Abaxis, there can be no assurance that these agreements will provide meaningful protection or adequate remedies for our trade secrets in the event of unauthorized use or disclosure of such information. The unauthorized dissemination of our confidential information would negatively impact our business.

We must increase sales of our Piccolo and VetScan products or we may not be able to increase profitability.

As of September 30, 2009, we had retained earnings of \$16.0 million. Our ability to continue to be profitable and to increase profitability will depend, in part, on our ability to increase our sales volumes of our Piccolo and VetScan products. Increasing the sales volume of our products will depend upon, among other things, our ability to:

- continue to improve our existing products and develop new and innovative products;
- increase our sales and marketing activities;
- effectively manage our manufacturing activities; and
- effectively compete against current and future competitors.

We cannot assure you that we will be able to successfully increase our sales volumes of our products to sustain or increase profitability.

We must continue to develop our sales, marketing and distribution experience in the human diagnostic market or our business will not grow.

Although we have gained experience marketing our VetScan products in the veterinary diagnostic market, we have limited sales, marketing and distribution experience with our Piccolo chemistry analyzers in the human diagnostic market. Accordingly, we cannot assure you that:

- we will be able to establish and maintain effective distribution arrangements in the human diagnostic market;
- any distribution arrangements that we are able to establish will be successful in marketing our products; or
- the costs associated with sales, marketing and distributing our products will not be excessive.

Should we fail to effectively develop our sales, marketing and distribution efforts, our growth will be limited and our results of operations will be adversely affected.

We could fail to achieve anticipated revenue if we experience problems related to the manufacture of our blood chemistry analyzers.

We manufacture our blood chemistry analyzers at our manufacturing facility in Union City, California. During fiscal 2008, we experienced problems related to the manufacture of our new blood chemistry analyzer, which were primarily related to difficulties and delays in obtaining certain key components that we purchase from various suppliers. These manufacturing problems were primarily related to quality control issues for key components that we obtain from our suppliers and to design issues of the key components required in our blood chemistry analyzer. Our difficulties in obtaining an adequate amount of quality components for the manufacture of our blood chemistry analyzer had a materially adverse impact on our sales of VetScan chemistry analyzers in fiscal 2008. We believe that we have taken appropriate steps to resolve these issues, including securing quality parts from our suppliers, but there can be no assurance that our efforts to resolve these manufacturing difficulties will continue to prove to be successful or that similar manufacturing problems will not arise in the future. If we are unable to prevent similar problems from occurring in the future, we may not be able to manufacture sufficient quantities to meet anticipated demand and, therefore, will not be able to effectively market and sell our blood chemistry analyzers; accordingly, our revenue and business would be materially adversely affected.

Table of Contents

We may inadvertently produce defective products, which may subject us to significant warranty liabilities or product liability claims and we may have insufficient product liability insurance to pay material uninsured claims.

Our business exposes us to potential warranty and product liability risks which are inherent in the testing, manufacturing and marketing of human and veterinary medical products. We strive to apply sophisticated methods to raw materials and produce defect-free medical test equipment. Although we have established procedures for quality control on both the raw materials that we receive from suppliers and our manufactured final products, these procedures may prove inadequate to detect a defect that occurs in limited quantities, that we have not anticipated or otherwise. Our Piccolo and VetScan chemistry analyzers may be unable to detect all errors which could result in the misdiagnosis of human or veterinary patients.

Should we inadvertently manufacture and ship defective products, we may be subject to substantial claims under our warranty policy or product liability laws. In addition, our policy is to credit medical providers for any defective product that we produce, including those reagent discs that are rejected by our Piccolo and VetScan chemistry analyzers. Therefore, even if a mass defect within a lot or lots of reagent discs were detected by our Piccolo and VetScan chemistry analyzers, the replacement of such reagent discs free of charge would be costly and could materially harm our financial condition. Further, in the event that a product defect is not detected in our Piccolo chemistry analyzer, our relatively recent expansion into the human medical market greatly increases the risk that the amount of damages involved with just one product defect would be material to our operations. We currently maintain limited product liability insurance that we believe is adequate for our current needs, taking into account the risks involved and cost of coverage. However, our product liability insurance and cash may be insufficient to cover potential liabilities. In addition, in the future the coverage that we require may be unavailable on commercially reasonable terms, if at all. Even with our current insurance coverage, a mass product defect, product liability claim or recall could subject us to claims above the amount of our coverage and would materially adversely affect our business and our financial condition.

We must effectively train and integrate the members of our sales team in order to achieve our anticipated revenue or expand our business.

Many of our sales personnel directly involved in the sales and marketing activities of our products have been employed by us for a limited period of time. In addition, we experience significant turnover in our sales and marketing personnel. If we are to increase our direct sales, particularly in the human medical market, we will need to train new sales personnel and supervise our sales team closely. We also will continue hiring additional sales personnel. If we are unable to retain our existing personnel, or attract and train additional qualified personnel, our growth in the medical market may be limited due to our lack of resources to market our products.

We need to successfully manufacture and market additional reagent discs for the human diagnostic market if we are to compete in that market.

We have developed a blood analysis system that consists of a portable blood analyzer and single-use reagent discs. Each reagent disc performs a series of standard blood tests. We believe that it is necessary to develop additional series of reagent discs with various tests for use with the Piccolo and VetScan chemistry analyzers. Historically, we have developed reagent discs suitable for the human medical and veterinary diagnostic markets. We have received 510(k) clearances from the U.S. Food and Drug Administration (FDA) for 25 test methods in the human medical market. These tests are included in standard tests for which the medical community receives reimbursements from third-party payors such as health maintenance organizations (HMOs) and Medicare. We may not be able to successfully manufacture or market these reagent discs. Our failure to meet these challenges will materially adversely affect our operating results and financial condition.

We rely primarily on distributors to sell our products and we rely on sole distributor arrangements in a number of countries. Our failure to successfully develop and maintain these relationships could adversely affect our business.

We sell our medical and veterinary products primarily through a limited number of distributors. As a result, we are dependent upon these distributors to sell our products and to assist us in promoting and creating a demand for our products. We operate on a purchase order basis with the distributors and the distributors are under no contractual obligation to continue carrying our products. Further, many of our distributors may carry our competitors' products, and may promote our competitors' products over our own products.

We depend on a number of distributors in North America who distribute our VetScan products. Our largest distributor in North America, DVM Resources, accounted for 10% of our total worldwide revenues for each of the three and six months ended September 30, 2009. We depend on our distributors to assist us in promoting our products in the veterinary market, and accordingly, if one or more of our distributors were to stop selling our products in the future, we may experience a temporary sharp decline or delay in our sales revenue until our customers identify another distributor or purchase products directly from us.

In the United States medical market, we depend on a few distributors for our Piccolo products. We entered into formal distribution agreements with the following distributors to sell and market Piccolo chemistry analyzers and medical reagent discs: National Distribution & Contracting, Inc., McKesson Medical-Surgical Inc., Cardinal Health, Henry Schein's Medical Group and PSS World Medical, Inc. We depend on these distributors to assist us in promoting market acceptance of our Piccolo chemistry analyzers.

Table of Contents

Internationally, we rely on only a few distributors for our products in both the medical and veterinary diagnostic markets. In October 2007, following the termination of our prior distributor agreement with T. Chatani & Co., Ltd., we signed an exclusive distribution agreement with Central Scientific Commerce, Inc. (CSC) to distribute the complete line of our medical and veterinary products in Japan. In the third quarter of fiscal 2008, CSC began the process of registering our instruments, the VetScan VS2, VetScan HM5 and Piccolo xpress in Japan. The registration process was completed in the first quarter of fiscal 2009, and consequently, CSC can begin to import and market our instruments along with our reagent discs and kits. However, we cannot assure you that our new distribution relationship with CSC will be as successful as our prior distribution arrangement, or at all. Furthermore, an inability of, or any delays by, our distributor in receiving the necessary approvals for our new or other products can adversely impact our revenues in Japan.

We currently rely on distributors that carry either our medical or veterinary products in the following countries: Afghanistan, Australia, Austria, Bahrain, Belgium, Canada, Czech Republic, Denmark, France, Germany, Hong Kong, India, Ireland, Israel, Italy, Japan, Korea, Macao, New Zealand, the Philippines, Portugal, Romania, Russia, Singapore, South Africa, Spain, Sweden, Switzerland, Turkey, Ukraine, the United Arab Emirates, the United Kingdom and the United States. Our distributors in each of these countries are responsible for obtaining the necessary approvals to sell our new and existing products. These distributors may not be successful in obtaining proper approvals for our new and existing products in their respective countries, and they may not be successful in marketing our products. We plan to continue to enter into additional distributor relationships to expand our international distribution base and solidify our international presence. However, we may not be successful in entering into additional distributor relationships on favorable terms, or at all. In addition, our distributors may terminate their relationship with us at any time. Historically, we have experienced a high degree of turnover among our international distributors. This turnover makes it difficult for us to establish a steady distribution network overseas. Consequently, we may not be successful in marketing our Piccolo and VetScan products internationally.

We depend on limited or sole suppliers for several key components in our products, many of whom we have not entered into contractual relationships with and failure of our suppliers to provide the components to us could harm our business.

We use several key components that are currently available from limited or sole sources as discussed below:

Reagent Discs: Two injection-molding manufacturers, C. Brewer & Co. and Nypro, Inc., currently make the molded plastic discs which, when loaded with reagents and welded together, form our reagent disc products. We believe that only a few manufacturers are capable of producing these discs to the narrow tolerances that we require. To date, we have only qualified these two manufacturers to manufacture the molded plastic discs.

Reagent Chemicals: We currently depend on the following single source vendors for some of the chemicals that we use to produce the dry reagent chemistry beads that are either inserted in our reagent discs or sold as stand-alone products: Amano Enzyme USA Co., Ltd., Genzyme Corporation, Kikkoman Corporation Biochemical Division, Microgenics Corporation, Roche Molecular Biochemicals of Roche Diagnostics Corporation, a division of F. Hoffmann-La Roche, Ltd., Sigma Aldrich Inc. and Toyobo Specialties (formerly Shinko American Inc.).

Blood Chemistry Analyzer Components: Our blood analyzer products use several technologically-advanced components that we currently purchase from a limited number of vendors, including certain components from a single-source supplier, UDT Sensors (a division of OSI Optoelectronics). Our analyzers also use a printer that is primarily made by Seiko North America Corporation. The loss of the supply of any of these components could force us to redesign our blood chemistry analyzers.

Hematology Instruments and Reagents: Our hematology instruments are manufactured by Diatron Medical Instruments PLC. in Hungary and are purchased by us as a completed instrument. In addition, to date, we have qualified only three suppliers to produce the reagents for our hematology instruments: Clinical Diagnostic Solutions, Inc., Diatron Medical Instruments PLC. and Mallinckrodt Baker BV.

Coagulation Analyzers and Cartridges: Our coagulation analyzers and cartridges are manufactured by Scandinavian MicroBiodevices APS in Denmark and are purchased by us as completed products.

We primarily operate on a purchase order basis with all of the suppliers of our molded plastic reagent discs, reagent chemicals, blood chemistry analyzer components, hematology instruments and hematology reagents and, therefore,

these suppliers are under no contractual obligation to supply us with their products or to do so at specified prices. Although we believe that there may be potential alternate suppliers available for these critical components, to date we have not qualified additional vendors beyond those referenced above and cannot assure you we would be able to enter into arrangements with additional vendors on favorable terms, or at all.

Because we are dependent on a limited number of suppliers and manufacturers for critical components to our products, we are particularly susceptible to any interruption in the supply of these products or the viability of our assembly arrangements. The loss of any one of these suppliers or a disruption in our manufacturing arrangements could materially adversely affect our business and financial condition.

Table of Contents

We may not be able to compete effectively with larger, more established entities or their products, or with future organizations or future products, which could cause our sales to decline.

Blood analysis is a well-established field in which there are a number of competitors that have substantially greater financial resources and larger, more established marketing, sales and service organizations than we do. We compete with the following organizations:

- commercial clinical laboratories;
- hospitals clinical laboratories; and
- manufacturers of bench top multi-test blood analyzers and other testing systems that health care providers can use on-site (a listing of our competitors is listed below).

Historically, hospitals and commercial laboratories performed most human diagnostic testing, and commercial laboratories performed most veterinary medical testing. We have identified five principal factors that we believe customers typically use to evaluate our products and those of our competitors. These factors include:

- range of tests offered;
- immediacy of results;
- cost effectiveness;
- ease of use; and
- reliability of results.

We believe that we compete effectively on each of these factors except for the range of tests offered. Clinical laboratories are effective at processing large panels of tests using skilled technicians and complex equipment. While our current offering of reagent discs cannot provide the same broad range of tests, we believe that in certain markets our products provide a sufficient breadth of test menus to compete successfully with clinical laboratories given the advantages of our products with respect to the other four factors. In addition, we cannot assure you that we will continue to be able to compete effectively on cost effectiveness, ease of use, immediacy of results or reliability of results. We also cannot assure you that we will ever be able to compete effectively on the basis of range of tests offered.

Competition in the human and veterinary diagnostic markets is intense. Our principal competitors in the human diagnostic market are Alfa Wassermann S.P.A., i-STAT Corporation (which was purchased by Abbott Laboratories), Johnson & Johnson (including its subsidiary, Ortho-Clinical Diagnostics, Inc.), Kodak (DT60 analyzer), Polymedco, Inc. and F. Hoffman-La Roche (Reflotron system). Our principal competitors in the veterinary diagnostic market are Idexx Laboratories, Inc. and Heska Corporation. Most of our competitors have significantly larger product lines to offer and greater financial and other resources than we do. In particular, many of our competitors have large sales forces and well-established distribution channels. Consequently, we must develop our distribution channels and significantly improve our direct sales force in order to compete in these markets.

Changes in third-party payor reimbursement regulations can negatively affect our business.

By regulating the maximum amount of reimbursement they will provide for blood testing services, third-party payors, such as HMOs, pay-per-service insurance plans, Medicare and Medicaid, can indirectly affect the pricing or the relative attractiveness of our human testing products. For example, the Centers for Medicare and Medicaid Services (the CMS) set the level of reimbursement of fees for blood testing services for Medicare beneficiaries. If third-party payors decrease the reimbursement amounts for blood testing services, it may decrease the amount that physicians and hospitals are able to charge patients for such services. Consequently, we would need to charge less for our products. If the government and third-party payors do not provide for adequate coverage and reimbursement levels to allow health care providers to use our products, the demand for our products will decrease.

We are subject to numerous governmental regulations and regulatory changes are difficult to predict and may be damaging to our business.

Need for FDA Certification for Our Medical Device Products

Our Piccolo products are regulated under the 1976 Medical Device Amendments to the Food, Drug and Cosmetic Act, which is administered by the FDA. The FDA has classified our Piccolo products as Class I and Class II devices. These classifications require us to submit to the FDA a pre-market notification form or 510(k). The FDA uses the 510(k) to substantiate product claims that are made by medical device manufacturers prior to marketing. In our 510(k)

notification, we must, among other things,

Table of Contents

establish that the product we plan to market is substantially equivalent to (1) a product that was on the market prior to the adoption of the 1976 Medical Device Amendment or (2) a product that the FDA has previously cleared under the 510(k) process.

The FDA review process of a 510(k) notification can last anywhere from three to six months, and the FDA must issue a written order finding substantial equivalence before a company can market a medical device. As of September 30, 2009, we have received market clearance from the FDA for our Piccolo chemistry analyzer and 25 reagent tests that we have on 13 reagent discs. We are currently developing additional tests that we will have to clear with the FDA through the 510(k) notification procedures. These new test products are crucial for our success in the human medical market. If we do not receive 510(k) clearance for a particular product, we will not be able to market that product in the United States, which could harm our future sales.

Need to Comply with Manufacturing Regulations

The 1976 Medical Device Amendment also requires us to manufacture our Piccolo products in accordance with Good Manufacturing Practices guidelines. Current Good Manufacturing Practice requirements are set forth in the 21 CFR 820 Quality System Regulation. These requirements regulate the methods used in, and the facilities and controls used for the design, manufacture, packaging, storage, installation and servicing of our medical devices intended for human use. Our manufacturing facility is subject to periodic inspections. In addition, various state regulatory agencies may regulate the manufacture of our products. To date, we have complied with the following federal, state, local and international regulatory requirements:

In April 2001, the State of California Food and Drug Branch granted our manufacturing facility in compliance status, based on the regulations for Good Manufacturing Practices for medical devices.

In May 2001, the State of California Food and Drug Branch granted licensing for our manufacturing facility in Union City, California.

In May 2002, we received our ISO 9001 certification, expanding our compliance with international quality standards.

In December 2003, we received ISO 13485 Quality System certification as required by the 2003 European In Vitro Device Directive. This certified our quality system specifically to medical devices.

In both March 2003 and September 2005, the FDA conducted a facility inspection and verified our compliance with the 21 CFR 820 Regulation.

In November 2006, we received our recertification to the ISO 13485:2003 Quality System Standard for medical devices.

In August 2008, the FDA conducted an additional facility inspection to verify our compliance with 21 CFR 820 Regulation.

We cannot assure you that we will successfully pass the latest FDA inspection or any re-inspection by the FDA or the State of California. In addition, we cannot assure you that we can comply with all current or future government manufacturing requirements and regulations. If we are unable to comply with the regulations, or if we do not pass routine inspections, our business and results of operations will be materially adversely affected.

Effects of the Clinical Laboratory Improvement Amendments on Our Products

Our Piccolo products are also affected by the Clinical Laboratory Improvement Amendments (the CLIA) of 1988. The CLIA are intended to insure the quality and reliability of all medical testing in the United States regardless of where the tests are performed. The current CLIA regulations divide laboratory tests into the following three categories:

- waived;
- moderately complex; and
- highly complex.

Many of the tests performed using the Piccolo chemistry analyzer are in the moderately complex category. This category requires that any location in which testing is performed be certified as a laboratory. Hence, we can only sell some Piccolo products to customers who meet the standards of a laboratory. To receive laboratory certification, a testing facility must be certified by the CMS. After the testing facility receives a laboratory certification, it must then meet the CLIA regulations. Because we can only sell some Piccolo products to testing facilities that are certified laboratories, the market for some products is correspondingly constrained.

We can currently offer the following Piccolo reagent discs as waived tests to the medical market: Basic Metabolic Panel,

Table of Contents

Comprehensive Metabolic Panel, Electrolyte Panel, General Chemistry 6, General Chemistry 13, Kidney Check, Lipid Panel, Lipid Panel Plus, Liver Panel Plus, MetLyte 8 Panel and Renal Function Panel. Waived status permits untrained personnel to run the Piccolo chemistry analyzer using these tests; thus, extending the sites (doctors' offices and other point-of-care environments) that can use the Piccolo chemistry analyzer. In April 2009, we submitted an assay for C-Reactive Protein (CRP) to the FDA for 510(k) clearance. We cannot assure you that we will successfully receive 510(k) clearance for this assay on a timely basis, or at all. We have included this assay on a new reagent, MetLyte Plus CRP, which is currently offered for sale and distribution only outside the United States. Although we are engaged in an active program to test and apply for CLIA waivers for additional analytes, we cannot assure you that we will successfully receive CLIA waived status from the FDA for other products. Consequently, for the reagent discs that have not received CLIA waived status, the market for our Piccolo products may be confined to those testing facilities that are certified as laboratories and our growth can be limited accordingly.

Need to Comply with Various Federal, State, Local and International Regulations

Federal, state, local and international regulations regarding the manufacture and sale of health care products and diagnostic devices may change. In addition, as we continue to sell in foreign markets, we may have to obtain additional governmental clearances in those markets. Foreign certifications that we have received include the following, among others:

In December 2003, we received certification from the British Standards Institute to the ISO 13485:1996 Quality System standard for medical devices. This quality system certification, along with successful completion of product testing to 2003 European standards and the translation of Piccolo product documentation into the required languages, enabled us to meet the compliance requirements of the CE Mark and the 2003 European In Vitro Device Directive.

In September 2005, we received the Canadian Medical Device Conformity Assessment System stamp on our ISO 13485 certificate to signify compliance with Health Canada regulations.

In March 2006, we received our certification to the 2003 version of the ISO 13485 Quality System Standard for medical devices.

In November 2006, we received our recertification to the ISO 13485:2003 Quality System Standard for medical devices.

We cannot predict what impact, if any, such current or future regulatory changes would have on our business. We may not be able to obtain regulatory clearances for our products in the United States or in foreign markets, and the failure to obtain these regulatory clearances will materially adversely affect our business and results of operations.

Although we believe that we will be able to comply with all applicable regulations of the FDA and of the State of California, including the Quality System Regulation, current regulations depend on administrative interpretations. Future interpretations made by the FDA, CMS or other regulatory bodies may adversely affect our business.

We have incurred and may continue to incur, in future periods, significant share-based compensation charges which may adversely affect our reported financial results.

Effective April 1, 2006, we adopted Accounting Standards Codification 718, Compensation-Stock Compensation, issued by the Financial Accounting Standards Board, which requires the measurement of all share-based payments to employees, using a fair-value-based method and the recording of such expense in our results of operations. The fair value of restricted stock unit awards used in our expense recognition method is measured based on the number of shares granted and the closing market price of our common stock on the date of grant. Such value is recognized as an expense, net of an estimated forfeiture rate, over the corresponding requisite service period. Since fiscal 2007, we granted restricted stock unit awards annually to employees based on the following time-based vesting schedule over a four-year period: five percent vesting after the first year; additional ten percent after the second year; additional 15 percent after the third year; and the remaining 70 percent after the fourth year of continuous employment. Since we began granting restricted stock units as part of our share-based compensation program in fiscal 2007, share-based compensation expense related to restricted stock units had a material impact on our earnings per share and on our financial statements and we expect that it will continue to adversely impact our reported results of operations, particularly in the fourth year of vesting for the restricted stock unit awarded to employees. As of September 30, 2009, our unrecognized compensation expense related to restricted stock unit awards granted to employees and directors to

date totaled \$14.8 million, which is expected to be recognized over a weighted average service period of 2.34 years. ***We depend on key members of our management and scientific staff and, if we fail to retain and recruit qualified individuals, our ability to execute our business strategy and generate sales would be harmed.***

We are highly dependent on the principal members of our management and scientific staff. The loss of any of these key personnel, including in particular Clinton H. Severson, our President, Chief Executive Officer and Chairman of our Board of Directors, might impede the achievement of our business objectives. We may not be able to continue to attract and retain skilled and experienced

Table of Contents

marketing, sales and manufacturing personnel on acceptable terms in the future because numerous medical products and other high technology companies compete for the services of these qualified individuals. We currently do not maintain key man life insurance on any of our employees.

We are subject to increasingly complex requirements from recent legislation requiring companies to evaluate internal control over financial reporting.

Rules adopted by the Securities and Exchange Commission pursuant to Section 404 of the Sarbanes-Oxley Act of 2002 require an assessment of internal control over financial reporting by our management and an attestation of the effectiveness of our internal controls over financial reporting by an independent registered public accounting firm. We have an ongoing program to perform the assessment, testing and evaluation to comply with these requirements and we expect to continue to incur significant expenses for Section 404 compliance on an ongoing basis.

Our management assessed the effectiveness of our internal control over financial reporting as of our fiscal years ended March 31, 2009 and 2008. Although we received an unqualified opinion on our consolidated financial statements for the fiscal years ended March 31, 2009 and 2008, and on the effectiveness of our internal control over financial reporting as of March 31, 2009 and 2008, we cannot predict the outcome of our testing in future periods. In the event that our internal controls over financial reporting are not effective as defined under Section 404, or any failure to implement required new or improved controls, or difficulties encountered in implementation could harm operating results or prevent us from accurately reporting financial results or cause a failure to meet our reporting obligations in the future. If management cannot assess internal control over financial reporting is effective, or our independent registered public accounting firm is unable to provide an unqualified attestation report on such assessment, investor confidence and our share value may be negatively impacted.

We may need additional funding in the future and these funds may not be available to us.

We believe that our existing capital resources, available line of credit and anticipated revenue from the sales of our products will be adequate to satisfy our currently planned operating and financial requirements through the next 12 months, although no assurances can be given. The terms of our line of credit contain a number of covenants concerning financial tests that we must meet, and these tests are more fully explained in Note 7 of the Notes to Consolidated Financial Statements contained in this Quarterly Report on Form 10-Q.

Further, we expect to incur incremental additional costs to support our future operations, including:

- further commercialization of our products and development of new test methods to allow us to further penetrate the human diagnostic market and the veterinary diagnostic market;
- our need to acquire capital equipment for our manufacturing facilities, which includes the ongoing costs related to the continuing development of our current and future products;
- research and design costs related to the continuing development of our current and future products; and
- additional pre-clinical testing and clinical trials for our current and future products.

To the extent that our existing resources and anticipated revenue from the sale of our products are insufficient to fund our activities or if we are unable to meet the financial covenants of our line of credit, we may have to raise additional funds from the issuance of public or private securities. In the event that we cannot maintain compliance with these financial covenants, we may also be subject to increased interest rate expenses. We may not be able to raise additional funding, or if we are able to, we may not be able to raise funding on acceptable terms. We may also dilute then-existing shareholders if we raise additional funds by issuing new equity securities. Alternately, we may have to relinquish rights to certain of our technologies, products and/or sales territories if we are required to obtain funds through arrangements with collaborative partners. If we are unable to raise needed funds, we may be required to curtail our operations significantly. This would materially adversely affect our operating results and financial condition.

We must comply with strict and potentially costly environmental regulations or we could pay significant fines.

We are subject to stringent federal, state and local laws, rules, regulations and policies that govern the use, generation, manufacture, storage, air emission, effluent discharge, handling and disposal of certain materials and wastes. In particular, we are subject to laws, rules and regulations governing the handling and disposal of biohazardous materials used in the development and testing of our products. Our costs to comply with applicable environmental regulations consist primarily of handling and disposing of human and veterinary blood samples for testing (whole blood, plasma,

serum). Although we believe that we have complied with applicable laws and regulations in all material respects and have not been required to take any action to correct any noncompliance, we may have to incur significant costs to comply with environmental regulations if our manufacturing to commercial levels continues to increase. In addition, if a government agency determines that we have not complied with these laws, rules and regulations, we may

Table of Contents

have to pay significant fines and/or take remedial action that would be expensive and we do not carry environmental-related insurance coverage.

Our facilities and manufacturing operations are vulnerable to natural disasters and other unexpected losses; system failures or delays may harm our business.

Our success depends on the efficient and uninterrupted operation of our manufacturing operations, which are co-located with our corporate headquarters in Union City, California. A failure of manufacturing operations, be it in the development and manufacturing of our Piccolo or VetScan blood chemistry analyzers or the reagent discs used in the blood chemistry analyzers, could result in our inability to supply customer demand.

We do not have a backup facility to provide redundant manufacturing capacity in the event of a system failure. Accordingly, if our location in Union City, California experienced a system failure or regulatory problem that temporarily shuts down our manufacturing facility, our manufacturing ability would become unavailable until we were able to bring an alternative facility online, a process which could take several weeks or even months. These manufacturing operations are also vulnerable to damage from earthquakes, fire, floods, power loss, telecommunications failures, break-ins and similar events. Although we carry property and business interruption insurance, our coverage may not be adequate to compensate us for all losses that may occur. Additionally, our computer servers may be vulnerable to computer viruses, physical or electronic break-ins and similar disruptions.

Fluctuations in foreign exchange rates and the possible lack of financial stability in foreign countries could prevent overseas sales growth.

Our international sales are currently primarily U.S. dollar-denominated. As a result, an increase in the value of the U.S. dollar relative to foreign currencies could make our products less competitive in international markets. For the limited amount of our sales denominated in local currencies, we are subject to fluctuations in exchange rates between the U.S. dollar and the particular local currency. Our operating results could also be adversely affected by the seasonality of international sales and the economic conditions of our overseas markets.

Our operating results could be materially affected by unanticipated changes in our tax provisions or exposure to additional income tax liabilities.

Our determination of our tax liability (like any company's determination of its tax liability) is subject to review by applicable tax authorities. Any adverse outcome of such a review could have an adverse effect on our operating results and financial condition. In addition, the determination of our provision for income taxes and other tax liabilities requires significant judgment including our determination of whether a valuation allowance against deferred tax assets is required. Although we believe our estimates and judgments are reasonable, the ultimate tax outcome may differ from the amounts recorded in our financial statements and may materially affect our financial results in the period or periods for which such determination is made.

Our stock price is highly volatile and investing in our stock involves a high degree of risk, which could result in substantial losses for investors.

The market price of our common stock, like the securities of many other medical products companies, fluctuates over a wide range, and will continue to be highly volatile in the future. During the quarter ended September 30, 2009, the closing sale prices of our common stock on the NASDAQ Global Market ranged from \$18.68 to \$29.22 per share and the closing sale price for our quarter ended September 30, 2009 was \$26.75 per share. During the last eight fiscal quarters ended September 30, 2009, our stock price closed at a high of \$39.74 per share on December 24, 2007 and a low of \$10.28 per share on October 27, 2008. Many factors may affect the market price of our common stock, including:

- fluctuation in our operating results;
- announcements of technological innovations or new commercial products by us or our competitors;
- changes in governmental regulation in the United States and internationally;
- prospects and proposals for health care reform;
- governmental or third-party payors' controls on prices that our customers may pay for our products;
- developments or disputes concerning our patents or our other proprietary rights;
- product liability claims and public concern as to the safety of our devices or similar devices developed by our competitors; and

general market conditions.

Table of Contents

Because our stock price is so volatile, investing in our common stock is highly risky. A potential investor must be able to withstand the loss of his entire investment in our common stock.

Our shareholders rights plan and our ability to issue preferred stock may delay or prevent a change of control of Abaxis.

Our shareholder rights plan, adopted by our board of directors on April 22, 2003, may make it more difficult for a third party to acquire, or discourage a third party from attempting to acquire control of, Abaxis. The shareholder rights plan could limit the price that investors might be willing to pay in the future for shares of our common stock.

In addition, our board of directors has the authority to issue up to 5,000,000 shares of preferred stock and to determine the price, rights, preferences, privileges and restrictions, including voting rights, of those shares without any further vote or action by the shareholders, except to the extent required by NASDAQ rules. The issuance of preferred stock, while providing flexibility in connection with possible financings or acquisitions or other corporate purposes, could have the effect of making it more difficult for a third party to acquire a majority of our outstanding voting stock.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds

Not applicable.

Item 3. Defaults Upon Senior Securities

Not applicable.

Item 4. Submission of Matters to a Vote of Security Holders

Not applicable.

Item 5. Other Information

Not applicable.

Item 6. Exhibits

Exhibit No.	Description of Document
3.1	Restated Articles of Incorporation (Filed with the Securities and Exchange Commission as an exhibit with our Annual Report on Form 10-K for the fiscal year ended March 31, 1993 and incorporated herein by reference.)
3.2	Certificate of Amendment of Amended and Restated Articles of Incorporation (Filed with the Securities and Exchange Commission as an exhibit with our Quarterly Report on Form 10-Q for the quarterly period ended December 31, 1996 and incorporated herein by reference.)
3.3	By-laws (Filed with the Securities and Exchange Commission in our Registration Statement No. 33-44326 on December 11, 1991 and incorporated herein by reference.)
3.4	Amendment to the By-laws (Filed with the Securities and Exchange Commission as an exhibit with our Current Report on Form 8-K on July 30, 2007 and incorporated herein by reference.)
4.1	Registration Rights Agreement, dated as of March 29, 2002 (Filed with the Securities and Exchange Commission as an exhibit with our Current Report on Form 8-K on May 13, 2002 and incorporated herein by reference.)
4.2	Reference is made to Exhibit 3.1, Exhibit 3.2, Exhibit 3.3 and Exhibit 3.4.
31.1	Certification of Chief Executive Officer pursuant to Section 302 of the Sarbanes-Oxley Act of 2002
31.2	Certification of Chief Financial Officer pursuant to Section 302 of the Sarbanes-Oxley Act of 2002
32.1#	Certification of Chief Executive Officer pursuant to Section 906 of the Sarbanes-Oxley Act of 2002

32.2# Certification of Chief Financial Officer pursuant to Section 906 of the Sarbanes-Oxley Act of 2002

This certification accompanies this Quarterly Report on Form 10-Q. The certification is not deemed filed with the Securities and Exchange Commission and is not to be incorporated by reference into any filing of Abaxis, Inc. under the Securities Act of 1933, as amended, or the Securities Exchange Act of 1934, as amended, whether made before or after the date of this Quarterly Report on Form 10-Q and irrespective of any general incorporation language contained in any such filing.
