**FUEL TECH, INC.**  
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS  
March 31, 2011  
(Unaudited)  
(in thousands, except share and per-share data)

***Note A: Nature of Business***

Fuel Tech, Inc. (Fuel Tech or the Company or we, us, or our) is a fully integrated company that uses a suite of advanced technologies to provide boiler optimization, efficiency improvement and air pollution reduction and control solutions to utility and industrial customers worldwide. Originally incorporated in 1987 under the laws of the Netherlands Antilles as Fuel-Tech N.V., Fuel Tech became domesticated in the United States on September 30, 2006, and continues as a Delaware corporation with its corporate headquarters at 27601 Bella Vista Parkway, Warrenville, Illinois, 60555-1617. Fuel Tech maintains an Internet website at [www.ftek.com](http://www.ftek.com). Fuel Tech's annual report on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K and any amendments to those reports filed or furnished pursuant to Section 13(a) of the Securities Exchange Act of 1934 as amended (Exchange Act), are made available through our website as soon as reasonably practical after electronically filed or furnished to the Securities and Exchange Commission. Also available on Fuel Tech's website are the Company's Corporate Governance Guidelines and Code of Ethics and Business Conduct, as well as the charters of the Audit and Compensation & Nominating committees of the Board of Directors. All of these documents are available in print without charge to stockholders who request them. Information on our website is not incorporated into this report.

Fuel Tech's special focus is the worldwide marketing of its nitrogen oxide (NOx) reduction and FUEL CHEM processes. The Air Pollution Control (APC) technology segment reduces NOx emissions in flue gas from boilers, incinerators, furnaces and other stationary combustion sources by utilizing combustion optimization techniques and Low NOx and Ultra Low NOx Burners; Over-Fire Air systems, NOxOUT® and HERT High Energy Reagent Technology SNCR systems; systems that incorporate ASCRA (Advanced Selective Catalytic Reduction) technologies including CASCADE, ULTRA and NOxOUT-SCR® processes, Ammonia Injection Grid (AIG) and Graduated Straightening Grid (GSG). The FUEL CHEM technology segment improves the efficiency, reliability and environmental status of combustion units by controlling slagging, fouling and corrosion, as well as the formation of sulfur trioxide, ammonium bisulfate, particulate matter (PM<sub>2.5</sub>), carbon dioxide, NOx and unburned carbon in fly ash through the addition of chemicals into the fuel or via TIFI® Targeted In-Furnace Injection programs. Fuel Tech has other technologies, both commercially available and in the development stage, all of which are related to APC and FUEL CHEM technology segments or are similar in their technological base. We have expended significant resources in the research and development of new technologies in building our proprietary portfolio of air pollution control, fuel and boiler treatment chemicals, computer modeling and advanced visualization technologies. Fuel Tech's business is materially dependent on the continued existence and enforcement of worldwide air quality regulations.

***Note B: Basis of Presentation***

The accompanying unaudited, condensed consolidated financial statements have been prepared in accordance with generally accepted accounting principles for interim financial information and with the instructions to Form 10-Q and Article 10 of Regulation S-X of the Exchange Act. Accordingly, they do not include all of the information and footnotes required by accounting principles generally accepted in the United States for complete financial statements. In the opinion of management, all adjustments (consisting of normal recurring accruals) considered necessary for a fair presentation of the balance sheet and results of operations for the periods covered have been included and all significant intercompany transactions and balances have been eliminated. The results of operations of all acquired businesses have been consolidated for all periods subsequent to the date of acquisition.

The balance sheet at December 31, 2010 has been derived from the audited financial statements at that date, but does not include all of the information and footnotes required by generally accepted accounting principles for complete financial statements.

For further information, refer to the consolidated financial statements and footnotes thereto included in Fuel Tech's Annual Report on Form 10-K for the year ended December 31, 2010 as filed with the Securities and Exchange Commission.

**Table of Contents*****Note C: Revenue Recognition Policy***

Revenues from the sales of chemical products are recorded when title transfers, either at the point of shipment or at the point of destination, depending on the contract with the customer.

Fuel Tech uses the percentage of completion method of accounting for equipment construction and license contracts that are sold within the Air Pollution Control technology segment. Under the percentage of completion method, revenues are recognized as work is performed based on the relationship between actual construction costs incurred and total estimated costs at completion. Construction costs include all direct costs such as materials, labor, and subcontracting costs, and indirect costs allocable to the particular contract such as indirect labor, tools and equipment, supplies, and depreciation. Revisions in completion estimates and contract values are made in the period in which the facts giving rise to the revisions become known and can influence the timing of when revenues are recognized under the percentage of completion method of accounting. The completed contract method is used for certain contracts when reasonably dependable estimates of the percentage of completion cannot be made. When the completed contract method is used, revenue and costs are deferred until the contract is substantially complete, which usually occurs upon customer acceptance of the installed product. Provisions are made for estimated losses on uncompleted contracts in the period in which such losses are determined. As of March 31, 2011, the Company had no contracts in progress that were identified as loss contracts.

Fuel Tech's APC contracts are typically eight to sixteen months in length. A typical contract will have three or four critical operational measurements that, when achieved, serve as the basis for us to invoice the customer via progress billings. At a minimum, these measurements will include the generation of engineering drawings, the shipment of equipment and the completion of a system performance test.

As part of most of its contractual APC project agreements, Fuel Tech will agree to customer-specific acceptance criteria that relate to the operational performance of the system that is being sold. These criteria are determined based on mathematical modeling that is performed by Fuel Tech personnel, which is based on operational inputs that are provided by the customer. The customer will warrant that these operational inputs are accurate as they are specified in the binding contractual agreement. Further, the customer is solely responsible for the accuracy of the operating condition information; all performance guarantees and equipment warranties granted by us are void if the operating condition information is inaccurate or is not met.

Accounts receivable includes unbilled receivables, representing revenues recognized in excess of billings on uncompleted contracts under the percentage of completion method of accounting. At March 31, 2011 and December 31, 2010, unbilled receivables were approximately \$10,398 and \$6,800, respectively, and are included in accounts receivable on the consolidated balance sheets. Billings in excess of costs and estimated earnings on uncompleted contracts were \$314 and \$650, at March 31, 2011 and December 31, 2010, respectively. Such amounts are included in other accrued liabilities on the consolidated balance sheets.

Fuel Tech has installed over 640 units with APC technology and normally provides performance guarantees to our customers based on the operating conditions for the project. As part of the project implementation process, we perform system start-up and optimization services that effectively serve as a test of actual project performance. We believe that this test, combined with the accuracy of the modeling that is performed, enables revenue to be recognized prior to the receipt of formal customer acceptance.

***Note D: Cost of Sales***

Cost of sales includes all internal and external engineering costs, equipment and chemical charges, inbound and outbound freight expenses, internal and site transfer costs, installation charges, purchasing and receiving costs, inspection costs, warehousing costs, project personnel travel expenses and other direct and indirect expenses specifically identified as project- or product line-related, as appropriate (e.g., test equipment depreciation and certain insurance expenses). Certain depreciation and amortization expenses related to tangible and intangible assets, respectively, are also allocated to cost of sales.

***Note E: Selling, General and Administrative Expenses***

Selling, general and administrative expenses primarily include the following categories except where an allocation to the cost of sales line item is warranted due to the project- or product-line nature of a portion of the expense category: salaries and wages, employee benefits, non-project travel, insurance, legal, rent, accounting and auditing, recruiting,

telephony, employee training, Board of Directors fees, auto rental, office supplies, dues and subscriptions, utilities, real estate taxes, commissions and bonuses, marketing materials, postage and business taxes. Departments comprising the selling, general and administrative line item

**Table of Contents**

primarily include the functions of executive management, finance and accounting, investor relations, regulatory affairs, marketing, business development, information technology, human resources, sales, legal and general administration.

**Note F: Earnings per Share Data**

Basic earnings per share excludes the dilutive effects of stock options, restricted stock units ( RSUs ), and the nil coupon non-redeemable convertible unsecured loan notes. Diluted earnings per share includes the dilutive effect of stock options, restricted stock units, and of the nil coupon non-redeemable convertible unsecured loan notes. The following table sets forth the weighted-average shares used in calculating the earnings per share for the three month periods ended March 31, 2011 and 2010.

|                                    | Three Months Ended March 31: |            |
|------------------------------------|------------------------------|------------|
|                                    | 2011                         | 2010       |
| Basic weighted-average shares      | 24,214,000                   | 24,212,000 |
| Conversion of unsecured loan notes | 7,000                        | 7,000      |
| Unexercised options and RSUs       | 448,000                      | 212,000    |
| Diluted weighted-average shares    | 24,669,000                   | 24,431,000 |

**Note G: Total Comprehensive Income**

Total comprehensive income for Fuel Tech is comprised of net income and the impact of foreign currency translation as follows:

|                              | Three Months Ended March 31: |        |
|------------------------------|------------------------------|--------|
|                              | 2011                         | 2010   |
| Comprehensive income:        |                              |        |
| Net income                   | \$ 1,339                     | \$ 214 |
| Foreign currency translation | 61                           | (59)   |
|                              | \$ 1,400                     | \$ 155 |

**Note H: Stock-Based Compensation**

Fuel Tech has a stock-based employee compensation plan, referred to as the Fuel Tech, Inc. Incentive Plan (Incentive Plan), under which awards may be granted to participants in the form of Non-Qualified Stock Options, Incentive Stock Options, Stock Appreciation Rights, Restricted Stock, Restricted Stock Units ( RSUs ), Performance Awards, Bonuses or other forms of share-based or non-share-based awards or combinations thereof. Participants in the Incentive Plan may be Fuel Tech's directors, officers, employees, consultants or advisors (except consultants or advisors in capital-raising transactions) as the directors determine are key to the success of Fuel Tech's business. The amount of shares that may be issued or reserved for awards to participants under a 2004 amendment to the Incentive Plan is 12.5% of outstanding shares calculated on a diluted basis. No options were granted in the three month periods ending March 31, 2011 and 2010. At March 31, 2011, Fuel Tech had approximately 448,000 and equity awards available for issuance under the Incentive Plan.

Stock-based compensation is included in selling, general, and administrative costs in our consolidated statements of operations. The components of stock-based compensation for the three month periods ended March 31, 2011 and 2010 were as follows:

**For the Three Months  
Ended March 31:  
2011                      2010**

Edgar Filing: FUEL TECH, INC. - Form 10-Q

|   |        |          |
|---|--------|----------|
| Stock options                                   | \$ 536 | \$ 1,352 |
| Restricted stock units                          | 81     |          |
| Total stock-based compensation expense          | 617    | 1,352    |
| Tax benefit of stock-based compensation expense | (195)  | (465)    |
| After-tax effect of stock based compensation    | \$ 422 | \$ 887   |

6

---

**Table of Contents**

As of March 31, 2011, there was \$4,818 of total unrecognized compensation cost related to all non-vested share-based compensation arrangements granted under the Incentive Plan.

**Stock Options**

The stock options granted to employees under the Incentive Plan have a 10-year life and they vest as follows: 50% after the second anniversary of the award date, 25% after the third anniversary, and the final 25% after the fourth anniversary of the award date. Fuel Tech calculates stock compensation expense for employee option awards based on the grant date fair value of the award, less expected annual forfeitures, and recognizes expense on a straight-line basis over the four-year service period of the award. Stock options granted to members of our board of directors vest immediately. Stock compensation for these awards is based on the grant date fair value of the award and is recognized in expense immediately.

Fuel Tech uses the Black-Scholes option pricing model to estimate the grant date fair value of employee stock options. The principal variable assumptions utilized in valuing options and the methodology for estimating such model inputs include: (1) risk-free interest rate – an estimate based on the yield of zero-coupon treasury securities with a maturity equal to the expected life of the option; (2) expected volatility – an estimate based on the historical volatility of Fuel Tech's Common Stock for a period equal to the expected life of the option; and (3) expected life of the option – an estimate based on historical experience including the effect of employee terminations.

Stock option activity for Fuel Tech's Incentive Plan for the three months ended March 31, 2011 was as follows:

|                                | <b>Number<br/>of<br/>Options</b> | <b>Weighted-<br/>Average<br/>Exercise<br/>Price</b> | <b>Weighted-<br/>Average<br/>Remaining<br/>Contractual<br/>Term</b> | <b>Aggregate<br/>Intrinsic<br/>Value</b> |
|--------------------------------|----------------------------------|---|---|--|
| Outstanding on January 1, 2011 | 2,856,125                        | \$ 14.68  |   |  |
| Granted                        |                                  |   |   |  |
| Exercised                      | (10,000)                         | 5.40  |   |  |
| Expired or forfeited           | (46,750)                         | 22.62   |   |  |
| Outstanding on March 31, 2011  | 2,799,375                        | \$ 14.58  | 5.6 years   | \$ 2,736                                 |
| Exercisable on March 31, 2011  | 2,322,125                        | \$ 14.93  | 5.2 years   | \$ 2,625                                 |

Non-vested stock option activity for the three months ended March 31, 2011 was as follows:

|                                | <b>Non-Vested<br/>Stock<br/>Options<br/>Outstanding</b> | <b>Weighted-Average<br/>Grant Date<br/>Fair Value</b> |
|--------------------------------|---|---|
| Outstanding on January 1, 2011 | 578,500   | \$ 7.50   |
| Granted                        |   |   |
| Vested                         | (89,500)  | 9.18  |
| Forfeited                      | (11,750)  | 5.95  |
| Outstanding on March 31, 2011  | 477,250   | \$ 7.23   |

As of March 31, 2011, there was \$2,731 of total unrecognized compensation cost related to non-vested stock options granted under the Incentive Plan. That cost is expected to be recognized over a weighted average period of 1.5 years.

Fuel Tech received proceeds from the exercise of stock options of \$54 in the three month period ended March 31, 2011. The intrinsic value of options exercised in the three month period ended March 31, 2011 was \$34. It is our policy to issue new shares upon option exercises, loan conversions, and vesting of restricted stock units. We have not used cash and do not anticipate any future use of cash to settle equity instruments granted under share-based payment arrangements.

**Table of Contents****Restricted Stock Units**

Restricted stock units ( RSUs ) granted to employees vest over time based on continued service (typically vesting over a period between two and four years). Such time-vested RSUs are valued at the date of grant using the intrinsic value method. Compensation cost, adjusted for estimated forfeitures, is amortized on a straight-line basis over the requisite service period.

In addition to the time vested RSUs described above, in March 2011 the Company entered into a performance-based RSU agreement (the Agreement ) with its executive management team. The Agreement includes three types of awards with each award type specifying a targeted number of RSUs that may be granted to each executive based on either the individual performance of the executive or the Company's relative performance compared to a peer group, as determined by the award type. The Compensation and Nominating Committee of our Board of Directors (the Committee ) determines the extent to which, if any, RSUs will be granted based on the achievement of the applicable performance criteria specified in the Agreement. This determination will be made following the completion of the applicable performance period (each a Determination Date ). Such performance based awards include the following:

The first type of award is based on individual performance during the 2011 calendar year as determined by the Committee based on performance criteria specified in the Agreement. These awards will vest over a three year period beginning on the Determination Date. We estimated the fair value of these performance-based RSU awards on the date of the Agreement using the intrinsic value method and our estimate of the probability that the specified performance criteria will be met. The fair value measurement and probability estimate will be re-measured each reporting date until the Determination Date, at which time the final award amount will be known. For these job performance-based awards, we amortize compensation costs over the requisite service period, adjusted for estimated forfeitures, for each separately vesting tranche of the award.

The second type of RSU award contains a targeted number of RSUs to be granted based on the Company's revenue growth relative to a specified peer group during the 2011 and 2012 calendar years. These awards vest 67% on the second anniversary of the Agreement date and 33% on the third anniversary of the Agreement date. We estimated the fair value of these performance-based RSU awards on the Agreement date using the intrinsic value method and our estimate of the probability that the specified performance criteria will be met. For these revenue growth performance-based awards, we amortize compensation costs over the requisite service period, adjusted for estimated forfeitures, for each separately vesting tranche of the award.

The third type of RSU award contains a targeted number of RSUs to be granted based on the total shareholder return ( TSR ) of the Company's common stock relative to a specified peer group during the 2011 and 2012 calendar years. These awards vest 67% on the second anniversary of the Agreement date and 33% on the third anniversary of the Agreement date. We estimated the fair value of these market-based RSU awards on the Agreement date using a Monte Carlo valuation methodology and amortize the fair value over the requisite service period for each separately vesting tranche of the award.

At March 31, 2011 there is \$2,087 of unrecognized compensation costs related to restricted stock unit awards to be recognized over a weighted average period of 4 years.

A summary of restricted stock unit activity for the three month period ended March 31, 2011 is as follows:

|  | Shares  | Weighted<br>Average<br>Grant Date<br>Fair Value |
|--|---------|---|
| Unvested restricted stock units at December 31, 2010 | 149,000 | \$ 8.63   |
| Granted  |         |   |
| Forfeited  |         |   |
| Vested   |         |   |
| Unvested restricted stock units at March 31, 2011    | 149,000 | \$ 8.63   |

**Deferred Directors Fees**

In addition to the Incentive Plan, Fuel Tech has a Deferred Compensation Plan for Directors (Deferred Plan). Under the terms of the Deferred Plan, Directors can elect to defer Directors fees for shares of Fuel Tech Common Stock that are issuable at a future date as defined in the agreement. In accordance with ASC 718, Fuel Tech accounts for these awards as equity awards as

**Table of Contents**

opposed to liability awards. In the periods ended March 31, 2011 and 2010, Fuel Tech recorded \$20 and \$28, respectively, of stock-based compensation expense under the Deferred Plan.

At March 31, 2011, Fuel Tech had 1,924,000 weighted average stock awards outstanding that were not dilutive for the purpose of inclusion in the calculation of diluted earnings per share but could potentially become dilutive in future periods.

***Note I: Debt***

On June 30, 2009, Fuel Tech entered into a \$25,000 revolving credit facility (the Facility) with JPMorgan Chase Bank, N.A (JPM Chase). The Facility has a term of two years through June 30, 2011, is unsecured, bears interest at a rate of LIBOR plus a spread range of 250 basis points to 375 basis points, as determined under a formula related to the Company's leverage ratio, and has the Company's Italian subsidiary, Fuel Tech S.r.l., as a guarantor. Fuel Tech can use this Facility for cash advances and standby letters of credit. As of March 31, 2011 and December 31, 2010, there were no outstanding borrowings on this Facility. The Credit Agreement dated as of June 30, 2009 by and between Fuel Tech, Inc. and JPM Chase and the Revolving Credit Note dated June 30, 2009 from Fuel Tech, Inc. to JPM Chase were included in their entirety as exhibits to the Company's Form 8-K filed with the Securities and Exchange Commission on July 2, 2009.

At its inception, the Facility contained several debt covenants with which the Company must comply on a quarterly or annual basis, including an annual capital expenditure limit of \$10,000, a minimum tangible net worth of \$42,000, adjusted upward for 50% of net income generated and 100% of all capital issuances, a minimum net income for the quarterly period ended June 30, 2009 of (\$2,000), and minimum net income for the quarterly period ended September 30, 2009 of \$750. There was not a minimum net income requirement for any periods subsequent to September 30, 2009. In addition, the original Facility covenants included a maximum Funded Debt to EBITDA Ratio (or Leverage Ratio, as defined in the Facility) of 2.0:1.0 based on the four trailing quarterly periods ended December 31, 2009 and a maximum Leverage Ratio of 1.5:1.0 based on the four trailing quarterly periods ending March 31, 2010 and all succeeding quarterly periods until the facility expires. Maximum funded debt is defined as all borrowed funds, outstanding standby letters of credit and bank guarantees. EBITDA includes after tax earnings with add backs for interest expense, income taxes, and depreciation and amortization expenses. Due to the Company's quarterly net loss of (\$698) for the three-month period ended September 30, 2009, however, the Company was in breach of its minimum quarterly net income covenant that was in effect at that time. The Company amended the Facility to obtain a waiver of this covenant breach from JPM Chase for the quarterly period ended September 30, 2009 and revised certain financial covenants as follows: for the three-month period ended December 31, 2009 the Company shall achieve a Minimum Net Income of (\$2,000), for the three-month period ended March 31, 2010 the Company's Leverage Ratio shall not exceed 2.75:1.0, and for the three month period ended June 30, 2010 and each subsequent quarterly period, the Leverage Ratio shall not exceed 1.5:1.0. The purchase price for allowable acquisitions made during any fiscal year was also lowered to \$5,000 in the aggregate if Leverage Ratio is greater than 2.75:1.0. The Company's spread matrix for rates and fees paid on its revolving credit facility and standby letters of credit was adjusted upward to include additional tiers tied to the quarterly calculated Leverage Ratio. No other Facility covenants were modified for any other period.

At March 31, 2011, the Company was in compliance with all financial covenants on the Facility, including a year-to-date capital expenditure amount of \$841, a tangible net worth amount of \$58,851, which was above the required amount of \$53,762 by \$5,090, and a Leverage Ratio of 0.33:1.0, which was well below the maximum requirement of 1.5:1.0.

Beijing Fuel Tech Environmental Technologies Company, Ltd. (Beijing Fuel Tech), a wholly-owned subsidiary of Fuel Tech, has a revolving credit facility (the China Facility) agreement with JPM Chase for RMB 45 million (approximately \$6,900), which expires on June 30, 2011. The facility is unsecured, bears interest at a rate of 120% of the People's Bank of China (PBOC) Base Rate (approximately 6.4% and 5.8% at March 31, 2011 and December 31, 2010, respectively) and does not contain any material debt covenants. Beijing Fuel Tech can use this facility for cash advances and bank guarantees. As of March 31, 2011 and December 31, 2010, Beijing Fuel Tech has borrowings outstanding in the amount of \$2,290 and \$2,269, respectively.

At March 31, 2011 and December 31, 2010, the Company had outstanding standby letters of credit and bank guarantees, predominantly to customers, totaling approximately \$1,045 and \$1,265, respectively, in connection with contracts in process. Fuel Tech is committed to reimbursing the issuing bank for any payments made by the bank under these instruments. At March 31, 2011 and December 31, 2010, there were no cash borrowings under the revolving credit facility and approximately \$23,955 and \$23,735, respectively, was available for future borrowings. The Company pays a commitment fee of 0.25% per year on the unused portion of the revolving credit facility. Management has met with the Company's lending institutions and, during the course of those meetings, was not made aware of any information indicating that they will not be able to perform their obligations for any letters of credit or guarantees issued, nor be unable to supply funds to Fuel Tech if the Company chooses to borrow funds under its two revolving credit facilities.

**Table of Contents**

In the event of default on either the domestic facility or the China facility, the cross default feature in each allows the lending bank to accelerate the payments of any amounts outstanding and may, under certain circumstances, allow the bank to cancel the facility. If the Company were unable to obtain a waiver for a breach of covenant and the bank accelerated the payment of any outstanding amounts, such acceleration may cause the Company's cash position to deteriorate or, if cash on hand were insufficient to satisfy the payment due, may require the Company to obtain alternate financing to satisfy the accelerated payment.

Interest payments in the amount of \$40 and \$44 were made during the three month periods ended March 31, 2011 and 2010, respectively.

***Note J: Business Segment and Geographic Disclosures***

Fuel Tech segregates its financial results into two reportable segments representing two broad technology segments as follows:

- The Air Pollution Control technology segment includes technologies to reduce NO<sub>x</sub> emissions in flue gas from boilers, incinerators, furnaces and other stationary combustion sources. These include Low and Ultra Low NO<sub>x</sub> Burners (LNB and ULNB), Over-Fire Air (OFA) systems, NO<sub>x</sub>OUT<sup>®</sup> and HERT Selective Non-Catalytic Reduction (SNCR) systems, and Advanced Selective Catalytic Reduction (ASCR<sup>™</sup>) systems. The ASCR system includes ULNB, OFA, and SNCR components, along with a downsized SCR catalyst, Ammonia Injection Grid (AIG), and Graduated Straightening Grid (GSG) systems to provide high NO<sub>x</sub> reductions at significantly lower capital and operating costs than conventional SCR systems. The CASCADE and NO<sub>x</sub>OUT-SCR<sup>®</sup> processes are basic types of ASCR systems, using just SNCR and SCR catalyst components. ULTRA technology creates ammonia at a plant site using safe urea for use with any SCR application. Flue Gas Conditioning systems are chemical injection systems offered in markets outside the U.S. and Canada to enhance electrostatic precipitator and fabric filter performance in controlling particulate emissions.
- The FUEL CHEM<sup>®</sup> technology segment, which uses chemical processes in combination with advanced Computational Fluid Dynamics (CFD) and Chemical Kinetics Modeling (CKM) boiler modeling, for the control of slagging, fouling, corrosion, opacity and other sulfur trioxide-related issues in furnaces and boilers through the addition of chemicals into the furnace using TIFI<sup>®</sup> Targeted In-Furnace Injection technology.

The Other classification includes those profit and loss items not allocated by Fuel Tech to each reportable segment. Further, there are no intersegment sales that require elimination.

Fuel Tech evaluates performance and allocates resources based on reviewing gross margin by reportable segment. The accounting policies of the reportable segments are the same as those described in the summary of significant accounting policies (Note 1 in our annual report on Form 10-K). Fuel Tech does not review assets by reportable segment, but rather, in aggregate for Fuel Tech as a whole.

**Table of Contents**

Information about reporting segment net sales and gross margin are provided below:

| <b>Three months ended<br/>March 31, 2011</b> | Air<br>Pollution<br>Control<br>Segment | FUEL<br>CHEM<br>Segment | Other   | Total     |
|--|--|-------------------------|---------|-----------|
