Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1), for the reporting period from January 1 to December 31, 2014.

Section 1 - Conflict Minerals Disclosure

Item 1.01 Conflict Minerals Disclosure and Report

Tiffany & Co. is a holding company that conducts business through its subsidiary companies (collectively, the “Company”). Through these subsidiaries, the Company sells jewelry and other items that it manufactures or contracts with third parties to manufacture to its specifications. The principal subsidiary of Tiffany & Co. is Tiffany and Company. The Company’s principal finished goods product category is jewelry, which represented 92% of worldwide net sales in fiscal 2014. Other finished goods sold by the Company include timepieces, leather goods, sterling silver goods (other than jewelry), china, crystal, stationery, fragrances and accessories, which represented, in total, 7% of worldwide net sales in fiscal 2014.

In fiscal 2014, more than half of the finished goods sold by the Company were produced in Company-owned manufacturing facilities. Approximately 98% of the gold used in the Company’s internally manufactured finished goods in fiscal 2014 was sourced directly by the Company from one mine and one recycled source, each of which is located in the United States. The remaining 2% consisted of gold purchased directly by Company vendors from sources other than the Company for use in specialized components manufactured by such vendors and sold to the Company for use in the Company’s internally manufactured finished goods. The Company did not purchase raw tin, tantalum or tungsten for use in its internal manufacturing facilities; however, components purchased by the Company for use in internal manufacturing may contain these minerals.

Substantially all of the remaining finished goods sold by the Company in fiscal 2014, including almost all non-jewelry items, were manufactured by third-party manufacturers to the Company’s specifications.

The Company purchases finished goods from these third-party manufacturers. The Company purchases raw materials, components and fabricated materials used in Company-owned manufacturing facilities and, in some cases, by the third-party manufacturers, from vendors. The Company generally has long-term stable relationships with these third-party manufacturers and vendors (collectively referred to herein as “vendors”). Vendor relationships are actively managed through a variety of channels, such as vendor contracts, vendor questionnaires, the Company’s Vendor Manual, which is an educational and training tool and mandate for vendors, and the Company’s Social Accountability Program, which supports vendor compliance with the Company’s Vendor Code of Conduct and incorporates Company risk assessments, vendor self-assessments and external audits of vendors. Information on the Social Accountability Program can be found at <http://www.tiffany.com/CSR/Supply.aspx>.

In this report, the term “applicable products” is used to refer to gold and other raw materials and to components and fabricated materials that are, in each case, purchased from vendors to be used in the Company’s internal manufacturing as well as to finished goods that are purchased from third-party manufacturers for sale by the Company. The finished goods products that the Company ultimately sells to its customers (whether internally manufactured by the Company or purchased by the Company as finished goods from third-party manufacturers) are referred to herein as “finished goods”.

Conflict Minerals Disclosure

This Form SD is filed pursuant to Rule 13p-1 promulgated under the Securities Exchange Act of 1934, as amended (“Rule 13p-1”), for the reporting period January 1, 2014 to December 31, 2014. A copy of Tiffany & Co.’s Conflict Minerals Report is provided as Exhibit 1.01 to this Form SD, and is publicly available together with this Form SD at <http://investor.tiffany.com/governance.cfm>.

Product Review

During 2014, the Company reviewed the finished goods that it manufactures either internally or pursuant to arrangements with third-party manufacturers (the “product review”). The objective of the product review was to identify finished goods that the Company manufactures or contracts to manufacture that may contain one or more of the following: the minerals gold, columbite-tantalite (coltan), cassiterite, or wolframite, or their derivatives tantalum, tin, and tungsten (the “Conflict Minerals”).

The product review was managed by the Company’s Conflict Minerals program office (the “Program Office”) and was supported by a working group composed of representatives from departments across the Company, including finished goods development, manufacturing, supply management, quality management, after sales service, and specific finished goods teams (the “Working Group”).

The Working Group consulted with product specialists throughout the Company who had in-depth knowledge with regard to specific categories of finished goods and the manufacturing of those goods. The product review covered all categories of finished goods sold by the Company and was designed to identify all finished goods manufactured in 2014 that were likely to contain Conflict Minerals. In certain instances, the Company conducted laboratory testing of finished goods and applicable products to inform the product review.

The Company also considered the impact on finished goods of services provided by independent third-party repair service providers (the “service providers”). These service providers primarily perform after-sale service on customer-owned merchandise. However, the service providers may also, on occasion, perform alterations to finished goods in connection with an initial sale at the request of a customer (e.g., ring sizing) or perform repairs on damaged stock inventory, as needed. These services, to the extent that they involve augmentation of finished goods (e.g., through the addition of metal for sizing or the use of solder for repair), represent a distinct phase of the finished goods lifecycle. In conducting the product review, the Program Office and Working Group evaluated the Company’s finished goods at two points in that lifecycle, considering whether (1) the finished goods may have contained Conflict Minerals as a result of the manufacturing process (e.g., at the time the manufactured finished goods entered the Company’s inventory) and (2) Conflict Minerals may have been introduced into the finished goods after they had entered the Company’s inventory, as a result of pre-sale or concurrent-with-sale repairs and alterations!

¹The Company notes that Exchange Act Rel. 34-67716, effective November 13, 2012, which adopted Rule 13p-1, states that the Securities and Exchange Commission does not consider “an issuer that only services, maintains, or repairs a product containing conflict minerals to be ‘manufacturing’ a product[.]” While the Company does not “only” service, maintain, or repair products, the Company considers its manufacturing process to be complete at the time finished goods enter the Company’s inventory for sale to customers. Nonetheless, in an effort to more fully understand the potential impact of Conflict Minerals on the finished goods sold to customers, the Program Office included pre-sale and concurrent-with-sale repairs and alterations in the scope of the product review and included the service providers that provide or support such services within the scope of its reasonable country of origin inquiry and its due

Form and Scope of Vendor Inquiries

Based on the product review, 209 service providers and vendors were identified as likely to supply the Company with applicable products in 2014 that were likely to contain Conflict Minerals. In identifying this group, the Program Office included each Company service provider and, for vendors, considered vendors who supplied applicable products likely to contain Conflict Minerals in years prior to 2014, and throughout, 2014. In late 2014, the Program Office sent Conflict Minerals surveys to these 209 service providers and vendors.

The objective of the Company's survey was to confirm whether Conflict Minerals were contained in the applicable products supplied or to be supplied by the vendors, or were likely to be introduced into the finished goods through pre-sale or concurrent-with-sale repairs and alterations, and, if so, whether those Conflict Minerals originated in the Democratic Republic of the Congo or in a country that shares an internationally recognized border with the Democratic Republic of the Congo (the "Covered Countries") or were from scrap or recycled sources.

The survey used by the Company was based on the conflict minerals reporting template developed by the Conflict-Free Sourcing Initiative (the "CFSI Reporting Template"). However, in creating the survey, the Program Office made certain modifications to the CFSI Reporting Template to tailor it to the specific nature of the Company's supply chain. The Company's survey also included an inquiry as to whether any Conflict Minerals used by vendors and service providers originated with smelters or refiners that have: (a) received a "DRC Conflict Free" designation from the Conflict-Free Smelter Program of the Conflict-Free Sourcing Initiative; (b) been included on the "Good Delivery" list of the London Bullion Market Association; and/or (c) been certified pursuant to the Responsible Jewellery Council's Chain-of-Custody Standard. In this report, the term "Three Conflict-Free Smelter Programs" is used to refer collectively to this program, list and standard.

After additional internal analysis, preliminary communications with vendors and service providers, and review of completed surveys, the Program Office determined that 171 of the 209 vendors and service providers surveyed either provided applicable products to the Company that contained Conflict Minerals that had entered the Company's supply chain after January 31, 2013 to be used in the manufacture of the Company's finished goods in 2014, or had provided pre-sale or concurrent-with-sale repairs and alterations in 2014 that might have introduced Conflict Minerals into the Company's finished goods. Accordingly, the Program Office determined that these 171 vendors and service providers (the "RCOI vendors") should be included within the scope of the Company's reasonable country of origin inquiry.

Reasonable Country of Origin Inquiry

All but one of the RCOI vendors responded to the Company's survey. Based on the survey responses and the product review, the Program Office confirmed that, in 2014, 167 of the 171 RCOI vendors (approximately 98%) provided the Company with applicable products that contained gold, ten of the 171 RCOI vendors (less than 6%) provided the Company with applicable products that contained tin or tungsten, and none of the RCOI vendors provided the Company with applicable products that contained tantalum.

diligence, as discussed in more detail in Exhibit 1.01. After-sale service on customer-owned merchandise was also determined to be outside the scope of the reasonable country of origin inquiry because such service was in no way part of the manufacturing process.

The Program Office reviewed the RCOI vendor survey responses to determine whether they were complete and internally consistent. Logical tests were then applied to evaluate whether the responses provided by the RCOI vendors could be considered to be reasonably reliable and free of red flags that may indicate risks in the supply chain (the “red flag review”). The red flag review included, for example, tests such as: (i) confirming whether the smelters or refiners identified by the RCOI vendors were among those designated or certified by, or included in, one or more of the Three Conflict-Free Smelter Programs, (ii) cross-checking the responses of RCOI vendors that identified common suppliers that were not smelters or refiners, (iii) reviewing other information known by the Company with regard to vendors, including the results of previous Social Accountability Program risk assessments and audits of vendors, and (iv) the geographic proximity of RCOI vendors to their identified smelters or refiners and mine sources.

As a result of the red flag review, the Program Office identified certain RCOI vendors that required additional inquiry and further engaged directly with those RCOI vendors.

In evaluating the reliability and reasonableness of the survey responses and, where applicable, the additional information provided by the RCOI vendors, and in reaching the conclusions set forth below, the Program Office noted that approximately 92% of the RCOI vendors were sufficiently familiar with their supply chains to be able to identify at least one smelter or refiner as the source of any Conflict Minerals that the applicable RCOI vendor supplied to the Company or used to alter or repair the Company’s finished goods. Of the remaining RCOI vendors, approximately 71% identified as their source of Conflict Minerals a supplier to them that was also a direct vendor to the Company, which enabled the Company to conduct an additional check of the reliability of these vendors’ representations. The Program Office, with support from the Working Group, conducted this check by engaging with the vendors’ underlying suppliers to confirm the sourcing information provided by the vendors.

Finally, in evaluating the reasonableness of the information provided by the RCOI vendors as to the source of gold contained in their applicable products, or potentially introduced by them through pre-sale or concurrent-with-sale repairs and alterations, the Program Office noted that recent estimates indicate that only 3-4% of the world’s gold is sourced from the Covered Countries.²

Oversight of the Company’s Conflict Minerals Compliance and Reporting Process

The Company’s Conflict Minerals Program Steering Committee (the “Steering Committee”) included members of the Company’s management and other employees from the following departments: global operations, manufacturing, supply management, legal, internal audit, finance, corporate social responsibility, quality management and after sales service. The Steering Committee received periodic progress reports on, and exercised an oversight function with respect to, the Company’s Conflict Minerals compliance process, including the product review, reasonable country of origin inquiry, red flag review, and preparation of this Form SD and Tiffany & Co.’s Conflict Minerals Report. The Audit Committee of the Board of Directors of Tiffany & Co. also received a report on the compliance process and exercised an oversight function with respect to the filing of this Form SD and the Conflict Minerals Report.

Conclusions from Reasonable Country of Origin Inquiry³

² U.S. Geological Survey 2012 Minerals Yearbook [Advance Release].

³ This report speaks to the composition of the Company’s finished goods as a result of the manufacturing process and as of the time they enter the Company’s inventory for sale to customers. See the Company’s Conflict Minerals Report for a discussion of the potential impact of pre-sale and concurrent-with-sale repairs and alterations on the

Based on the Company's reasonable country of origin inquiry, the Company has determined that it has no reason to believe that Conflict Minerals used in the following finished goods product categories may have originated in the Covered Countries:

Jewelry

- bracelets
- brooches/clips
- charms
- earrings
- pendants and necklaces
- rings

Non-Jewelry

- fragrance
- key rings
- leather accessories
- personal accessories (e.g., shirt studs, cuff links and writing instruments)
- recognition awards, not including internally manufactured hollowware
- sundries (e.g., earring backs, clasps and other replacements and components sold independently to customers for post-sale customer service support)
- table accessories (e.g., trays, vases, dinnerware, frames and candlesticks), not including internally manufactured hollowware
- timepieces

For three other categories of finished goods, including internally manufactured hollowware, the Company has determined that the responses obtained in the reasonable country of origin inquiry were insufficient to form the basis for a reasonable belief that none of the Conflict Minerals necessary to the functionality or production of the finished goods in those categories originated in a Covered Country. The Company has therefore exercised due diligence on the source and chain of custody of these Conflict Minerals as described in Exhibit 1.01 (the "Conflict Minerals Report").

Company's finished goods.

Item 1.02

A copy of the Conflict Minerals Report is provided as Exhibit 1.01 to this Form SD. A copy of the Conflict Minerals Report together with this Form SD is publicly available at <http://investor.tiffany.com/governance.cfm>.
