VANECK VECTORS™ AFRICA INDEX ETF***SUMMARY INFORMATION****INVESTMENT OBJECTIVE**

VanEck Vectors™ Africa Index ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the MVIS™ GDP Africa Index (the Africa Index).

FUND FEES AND EXPENSES

The following tables describe the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None
Annual Fund Operating Expenses
(expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.50%
Other Expenses	0.32%

Total Annual Fund Operating Expenses ^(a)	0.82%
Fee Waivers and Expense Reimbursement ^(a)	-0.03%

Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.79%
--	-------

^(a) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs, trading expenses, taxes and extraordinary expenses) from exceeding 0.78% of the Fund's average daily net assets per year until at least May 1, 2017. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same (except that the example incorporates the fee waiver and/or expense reimbursement arrangement for only the first year). Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR EXPENSES

1	\$	81
3	\$	259
5	\$	452
10	\$	1,011

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 33% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in securities that comprise the Fund's benchmark index. The Africa Index includes local listings of companies that are incorporated in Africa and offshore listings of companies incorporated outside of Africa but that generate at least 50% of their revenues (or, where applicable, have at least 50% of their assets) in

* Prior to May 1, 2016, the Fund's name was Market Vectors Africa Index ETF.

VANECK VECTORS™ AFRICA INDEX ETF (continued)

Africa. Such companies may include small- and medium-capitalization companies. Subject to country and issuer limitations, the country weightings in the Africa Index are based on their relative gross domestic product (GDP) weights as compared to all other countries represented in the Africa Index. As of December 31, 2015, the Africa Index included 89 securities of companies with a market capitalization range of between approximately \$510 million and \$57.4 billion and a weighted average market capitalization of \$7.34 billion. These amounts are subject to change. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days prior written notice to shareholders.

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Africa Index by investing in a portfolio of securities that generally replicates the Africa Index. Under various circumstances or under certain market conditions, it may not be possible or practicable to purchase all of the securities in the Africa Index or in the weighting of such securities in the Africa Index. In these cases, the Fund may purchase a sample of securities in the Africa Index or underweight or overweight a security in the Africa Index.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Africa Index concentrates in an industry or group of industries. As of December 31, 2015, the Africa Index was concentrated in the financial services sector, and each of the energy, basic materials, telecommunications and consumer staples sectors represented a significant portion of the Africa Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund, each of which could significantly and adversely affect the value of an investment in the Fund.

Special Risk Considerations of Investing in African Issuers. Investment in securities of African issuers involves risks not typically associated with investments in securities of issuers in more developed countries or geographic regions that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, expropriation and/or nationalization of assets, restrictions on and government intervention in international trade, confiscatory taxation, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, the impact on the economy as a result of civil war, and social instability as a result of religious, ethnic and/or socioeconomic unrest and, in certain countries, genocidal warfare. Unanticipated political or social developments may result in sudden and significant investment losses. Additionally, Africa is located in a part of the world that has historically been prone to natural disasters, such as droughts, and is economically sensitive to environmental events.

The securities markets in Africa are underdeveloped and are often considered to be less correlated to global economic cycles than those markets located in more developed countries or geographic regions. As a result, securities markets in Africa are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. There may also be a high concentration of trading volume in a small number of issuers representing a limited number of sectors or industries. Moreover, trading on securities

markets may be suspended altogether.

Certain economies in African countries depend to a significant degree upon exports of primary commodities such as agricultural products, gold, silver, copper, diamonds and oil. These economies therefore are vulnerable to changes in commodity prices, which in turn may be affected by a variety of factors.

Certain governments in Africa may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in those countries. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in countries in Africa. Moreover, certain countries in Africa may require governmental approval or special licenses prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of those countries and/or impose additional taxes on foreign investors. These factors, among others, make investing in issuers located or operating in countries in Africa significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of the Fund's Shares.

There may be a risk of loss due to the imposition of restrictions on repatriation of capital invested. In addition, there may be limitations or delays in the convertibility or repatriation of certain African currencies, which would adversely affect the U.S. dollar value and/or liquidity of the Fund's investments denominated in such African currencies, may impair the Fund's ability to achieve its investment objective and/or may impede the Fund's ability to satisfy redemption requests in a timely manner. For these or other reasons, the Fund could seek to suspend redemptions of Creation Units, including in the event that an

emergency exists in which it is not reasonably practicable for the Fund to dispose of its securities or to determine its net asset value (NAV). The Fund could also, among other things, limit or suspend creations of Creation Units. During the period that creations or redemptions are affected, the Fund's shares could trade at a significant premium or discount to their NAV. In the case of a period during which creations are suspended, the Fund could experience substantial redemptions, which may exacerbate the discount to NAV at which the Fund's shares trade, cause the Fund to experience increased transaction costs, and cause the Fund to make greater taxable distributions to shareholders of the Fund. When the Fund holds illiquid investments, its portfolio may be harder to value.

The value of certain African currencies may be subject to a high degree of fluctuation and the income received by the Fund will be principally in African currencies. The Fund's exposure to certain African currencies and changes in value of such African currencies versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and the particular African currency.

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because certain foreign securities markets may be limited in size, the activity of large traders may have an undue influence on the prices of securities that trade in such markets. Because the Fund may invest in securities denominated in foreign currencies and some of the income received by the Fund may be in foreign currencies, changes in currency exchange rates may negatively impact the Fund's return. The risks of investing in emerging market countries are greater than risks associated with investments in foreign developed countries.

Risk of Investing in Frontier Market Issuers. Most African countries are considered to be frontier markets. Frontier market countries generally have smaller economies and less developed capital markets than traditional emerging markets, and, as a result, the risks of investing in frontier market countries are magnified. Investments in securities of frontier market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

Risk of Investing in Depositary Receipts. The Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities. Depositary receipts are receipts listed on U.S. or foreign exchanges issued by banks or trust companies that entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market and, if not included in the Africa Index, may negatively affect the Fund's ability to replicate the performance of the Africa Index.

Risk of Investing in the Financial Services Sector. To the extent that the Fund continues to be concentrated in the financial services sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the financial services sector. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates, by loan losses, which usually increase in economic downturns, and by credit rating downgrades. In addition, the financial services sector is undergoing numerous changes, including continuing

consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, some companies in the financial services sector perceived as benefitting from government intervention in the past may be subject to future government-imposed restrictions on their businesses or face increased government involvement in their operations. Increased government involvement in the financial services sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets may cause companies operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in the Energy Sector. To the extent that the energy sector continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the energy sector. Companies operating in the energy sector are subject to risks including, but not limited to, economic growth, worldwide demand, political instability in the regions that the companies operate, government regulation stipulating rates charged by utilities, interest rate sensitivity, oil price volatility, energy conservation, environmental policies, depletion of resources and the cost of providing the specific utility services. Recently, the price of oil has declined significantly

VANECK VECTORS™ AFRICA INDEX ETF (continued)

and experienced significant volatility, which has adversely impacted companies operating in the energy sector. In addition, these companies are at risk of civil liability from accidents resulting in injury, loss of life or property, pollution or other environmental damage claims and risk of loss from terrorism and natural disasters.

Risk of Investing in the Basic Materials Sector. To the extent that the basic materials sector continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the basic materials sector. Companies engaged in the production and distribution of basic materials may be adversely affected by changes in world events, political and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in the Telecommunications Sector. To the extent that the telecommunications sector continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the telecommunications sector. Companies in the telecommunications sector may be affected by industry competition, substantial capital requirements, government regulations and obsolescence of telecommunications products and services due to technological advancement.

Risk of Investing in the Consumer Staples Sector. To the extent that the consumer staples sector continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the consumer staples sector. Companies in the consumer staples sector may be adversely affected by changes in the worldwide economy, consumer spending, competition, demographics and consumer preferences, exploration and production spending.

Risk of Investing in Small- and Medium-Capitalization Companies. Small- and medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. In addition, these companies often have greater price volatility, lower trading volume and less liquidity than larger more established companies. Returns on investments in securities of small-capitalization and medium-capitalization companies could trail the returns on investments in securities of large-capitalization companies.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have generally also experienced significantly more volatility in those returns, although under certain market conditions fixed income securities may have comparable or greater price volatility.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Africa Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Africa Index and incurs costs

associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Africa Index and raising cash to meet redemptions or deploying cash in connection with newly created Creation Units (defined herein). The Fund also bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the Africa Index. In addition, the Fund may not invest in certain securities included in the Africa Index, or invest in them in the exact proportions in which they are represented in the Africa Index, due to legal restrictions or limitations imposed by the governments of certain African countries, a lack of liquidity on stock exchanges in which such securities trade, potential adverse tax consequences or other regulatory reasons (such as diversification requirements). Additionally, the Fund may not invest in certain securities included in the Africa Index due to limitations or delays in the convertibility or repatriation of local currencies. In addition, the Fund maintains a tax reserve as a provision for Egyptian taxes while the Africa Index does not. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its NAV based on fair value prices and the value of the Africa Index is based on securities' closing prices on local foreign markets (*i.e.*, the value of the Africa Index is not based on fair value prices), the Fund's ability to track the Africa Index may be adversely affected. For tax efficiency purposes, the Fund may sell certain securities, and such sale may cause the Fund to realize a loss and deviate from the performance of the Africa Index. In light of the above factors,

including the maintenance of a tax reserve as a provision for Egyptian taxes, as discussed above, the Fund's return may deviate significantly from the return of the Africa Index.

Authorized Participant Concentration Risk. The Fund may have a limited number of financial institutions that act as Authorized Participants (APs), none of which are obligated to engage in creation or redemption transactions. To the extent that those APs exit the business, or are unable to or choose not to process creation and/or redemption orders, and no other AP is able to step forward to create and redeem, Shares may trade like closed-end funds at a discount to NAV and possibly face trading halts and/or de-listing.

No Guarantee of Active Trading Market. While Shares are listed on NYSE Arca, there can be no assurance that an active trading market for the Shares will be maintained. Further, secondary markets may be subject to irregular trading activity, market dislocations, wide bid/ask spreads and extended trade settlement periods, which could cause a material decline in the Fund's NAV.

Trading Issues. Trading in Shares on NYSE Arca may be halted due to market conditions or for reasons that, in the view of NYSE Arca, make trading in Shares inadvisable. In addition, trading in Shares on NYSE Arca is subject to trading halts caused by extraordinary market volatility pursuant to NYSE Arca's circuit breaker rules. There can be no assurance that the requirements of NYSE Arca necessary to maintain the listing of the Fund will continue to be met or will remain unchanged.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Africa Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

ETF Shares Trading and Premium/Discount Risk. The market prices of the Shares may fluctuate in response to the Fund's NAV, the intraday value of the Fund's holdings and supply and demand for Shares. The Adviser cannot predict whether Shares will trade above, below, or at their most recent NAV. Disruptions to creations and redemptions, the existence of market volatility or potential lack of an active trading market for Shares (including through a trading halt), as well as other factors, may result in Shares trading at a significant premium or discount to NAV or to the intraday value of the Fund's holdings. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses. The securities held by the Fund may be traded in markets that close at a different time than NYSE Arca. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when NYSE Arca is open but after the applicable market closing, fixing or settlement times, bid-ask spreads on NYSE Arca and the resulting premium or discount to the Shares' NAV may widen.

Risk of Cash Transactions. Unlike other exchange-traded funds (ETFs), the Fund expects to effect its creations and redemptions partially for cash, rather than in-kind securities. Therefore, it may be required to sell portfolio securities and subsequently recognize gains on such sales that the Fund might not have recognized if it were to distribute portfolio securities in kind. As such, investments in Shares may be less tax-efficient than an investment in a conventional ETF.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Africa Index concentrates in a particular sector or sectors or industry or group of industries. To the extent that the Fund continues to be concentrated in the financial services sector, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that sector will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by comparing the Fund's performance from year to year and by showing how the Fund's average annual returns for the one year, five year and since inception periods compared with the Fund's benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.vaneck.com.

VANECK VECTORS™ AFRICA INDEX ETF (continued)**Annual Total Returns (%) Calendar Years****Best Quarter:** 36.75% 2Q 09**Worst Quarter:** -18.75% 3Q 15**Average Annual Total Returns for the Periods Ended December 31, 2015**

The after-tax returns presented in the table below are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown below. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	Past One Year	Past Five Years	Since Inception (7/10/2008)
VanEck Vectors Africa Index ETF (return before taxes)	-29.41%	-9.57%	-8.02%

 Vectors
 Brazil
 Small-Cap
 ETF.

VANECK VECTORS BRAZIL SMALL-CAP ETF (continued)

50% of its revenues (or, in certain circumstances, has at least 50% of its assets) in Brazil. As of December 31, 2015, the Brazil Small-Cap Index included 61 securities of companies with a market capitalization range of between approximately \$120 million and \$1.5 billion and a weighted average market capitalization of \$750 million. These amounts are subject to change. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Brazil Small-Cap Index by investing in a portfolio of securities that generally replicates the Brazil Small-Cap Index. The Fund will normally invest at least 80% of its assets in securities that comprise the Brazil Small-Cap Index.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Brazil Small-Cap Index concentrates in an industry or group of industries. As of December 31, 2015, the Brazil Small-Cap Index was concentrated in the consumer discretionary sector, and each of the financial services, industrials and health care sectors represented a significant portion of the Brazil Small-Cap Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund, each of which could significantly and adversely affect the value of an investment in the Fund.

Special Risk Considerations of Investing in Brazilian Issuers. The Brazilian government has exercised, and continues to exercise, significant influence over the Brazilian economy. The Brazilian economy has been characterized by frequent, and occasionally drastic, interventions by the Brazilian government, including the imposition of wage and price controls, exchange controls, limiting imports and other measures. The Brazilian government has often changed monetary, taxation, credit, trade and other policies to influence the core of Brazil's economy. Actions taken by the Brazilian government concerning the economy may have significant effects on Brazilian companies and on market conditions and prices of Brazilian securities. Brazil's economy has recently experienced sluggish economic growth due to, among other things, weak consumer spending, political turmoil, high rates of inflation and low commodity prices. The Brazilian government has privatized or has begun the process of privatizing certain entities, notably in the telecommunications and energy sectors. Certain of these newly privatized entities have suffered losses due to, among other things, the inability to adjust to a competitive environment.

The market for Brazilian securities is directly influenced by the flow of international capital, and economic and market conditions of certain countries, especially emerging market countries. As a result, adverse economic conditions or developments in other emerging market countries have at times significantly affected the availability of credit in the Brazilian economy and resulted in considerable outflows of funds and declines in the amount of foreign currency invested in Brazil.

Investments in Brazilian securities may be subject to certain restrictions on foreign investment. Brazilian law provides that whenever a serious imbalance in Brazil's balance of payments exists or is anticipated, the Brazilian government may impose temporary restrictions on the remittance to foreign investors of the proceeds of their investment in Brazil.

and on the conversion of the Brazilian Real into foreign currency.

Brazil has historically experienced high rates of inflation and a high level of debt, each of which may constrain economic growth. Despite rapid development in recent years, Brazil still suffers from high levels of corruption, crime and income disparity. The Brazilian economy is also heavily dependent upon commodity prices and international trade. Unanticipated political or social developments may result in sudden and significant investment losses. An increase in prices for commodities, such as petroleum, the depreciation of the Brazilian Real and future governmental measures seeking to maintain the value of the Brazilian Real in relation to the U.S. dollar, may trigger increases in inflation in Brazil and may slow the rate of growth of the Brazilian economy. Conversely, appreciation of the Brazilian Real relative to the U.S. dollar may lead to the deterioration of Brazil's current account and balance of payments as well as limit the growth of exports.

Because the Fund's assets will be invested primarily in equity securities of Brazilian issuers and the income received by the Fund will be principally in Brazilian Real. The Fund's exposure to the Brazilian Real and changes in value of the Brazilian Real versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and Brazilian Real.

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because certain foreign securities markets may be limited in size, the activity of large traders

may have an undue influence on the prices of securities that trade in such markets. Because the Fund may invest in securities denominated in foreign currencies and some of the income received by the Fund may be in foreign currencies, changes in currency exchange rates may negatively impact the Fund's return. The risks of investing in emerging market countries are greater than risks associated with investments in foreign developed countries.

Risk of Investing in Emerging Market Issuers. Investments in securities of emerging market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

Risk of Investing in Depositary Receipts. The Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities. Depositary receipts are receipts listed on U.S. or foreign exchanges issued by banks or trust companies that entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market and, if not included in the Brazil Small-Cap Index, may negatively affect the Fund's ability to replicate the performance of the Brazil Small-Cap Index.

Risk of Investing in the Consumer Discretionary Sector. To the extent that the Fund continues to be concentrated in the consumer discretionary sector, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the consumer discretionary sector. Companies engaged in the consumer discretionary sector are subject to fluctuations in supply and demand. These companies may also be adversely affected by changes in consumer spending as a result of world events, political and economic conditions, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in the Financial Services Sector. To the extent that the financial services sector continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the financial services sector. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates, by loan losses, which usually increase in economic downturns, and by credit rating downgrades. In addition, the financial services sector is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, some companies in the financial services sector perceived as benefitting from government intervention in the past may be subject to future government-imposed restrictions on their businesses or face increased government involvement in their operations. Increased government involvement in the financial services sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets may cause companies operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in the Industrials Sector. To the extent that the industrials sector continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the industrials sector. Companies in the industrials sector may be adversely affected

by changes in government regulation, world events and economic conditions. In addition, companies in the industrials sector may be adversely affected by environmental damages, product liability claims and exchange rates.

Risk of Investing in the Health Care Sector. To the extent that the health care sector continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the health care sector. Companies in the health care sector may be affected by extensive government regulation, restrictions on government reimbursement for medical expenses, rising costs of medical products and services, pricing pressure, an increased emphasis on outpatient services, limited number of products, industry innovation, changes in technologies and other market developments. Many health care companies are heavily dependent on patent protection and are subject to extensive litigation based on product liability and similar claims.

Risk of Investing in Small- and Medium-Capitalization Companies. Small- and medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. In addition, these companies often have greater price volatility, lower trading volume and less liquidity than larger more established companies. Returns on investments in securities

VANECK VECTORS BRAZIL SMALL-CAP ETF (continued)

of small-capitalization and medium-capitalization companies could trail the returns on investments in securities of large-capitalization companies.

Risk of Investing in Micro-Capitalization Companies. Micro-capitalization companies are subject to substantially greater risks of loss and price fluctuations because their earnings and revenues tend to be less predictable (and some companies may be experiencing significant losses), and their share prices tend to be more volatile and their markets less liquid than companies with larger market capitalizations. The shares of micro-capitalization companies tend to trade less frequently than those of larger, more established companies, which can adversely affect the pricing of these securities and the future ability to sell these securities.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have generally also experienced significantly more volatility in those returns, although under certain market conditions fixed income securities may have comparable or greater price volatility.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Brazil Small-Cap Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Brazil Small-Cap Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Brazil Small-Cap Index and raising cash to meet redemptions or deploying cash in connection with newly created Creation Units (defined herein). The Fund also bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the Brazil Small-Cap Index. In addition, the Fund may not be able to invest in certain securities included in the Brazil Small-Cap Index, or invest in them in the exact proportions in which they are represented in the Brazil Small-Cap Index, due to legal restrictions or limitations imposed by the government of Brazil, a lack of liquidity on stock exchanges in which such securities trade, potential adverse tax consequences or other regulatory reasons (such as diversification requirements). The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the Brazil Small-Cap Index is based on securities' closing prices on local foreign markets (*i.e.*, the value of the Brazil Small-Cap Index is not based on fair value prices), the Fund's ability to track the Brazil Small-Cap Index may be adversely affected. For tax efficiency purposes, the Fund may sell certain securities, and such sale may cause the Fund to realize a loss and deviate from the performance of the Brazil Small-Cap Index. In light of the factors discussed above, the Fund's return may deviate significantly from the return of the Brazil Small-Cap Index.

Authorized Participant Concentration Risk. The Fund may have a limited number of financial institutions that act as Authorized Participants (APs), none of which are obligated to engage in creation or redemption transactions. To the extent that those APs exit the business, or are unable to or choose not to process creation and/or redemption orders, and no other AP is able to step forward to create and redeem, Shares may trade like closed-end funds at a discount to

NAV and possibly face trading halts and/or de-listing.

No Guarantee of Active Trading Market. While Shares are listed on NYSE Arca, there can be no assurance that an active trading market for the Shares will be maintained. Further, secondary markets may be subject to irregular trading activity, market dislocations, wide bid/ask spreads and extended trade settlement periods, which could cause a material decline in the Fund's NAV.

Trading Issues. Trading in Shares on NYSE Arca may be halted due to market conditions or for reasons that, in the view of NYSE Arca, make trading in Shares inadvisable. In addition, trading in Shares on NYSE Arca is subject to trading halts caused by extraordinary market volatility pursuant to NYSE Arca's circuit breaker rules. There can be no assurance that the requirements of NYSE Arca necessary to maintain the listing of the Fund will continue to be met or will remain unchanged.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Brazil Small-Cap Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may

actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

ETF Shares Trading and Premium/Discount Risk. The market prices of the Shares may fluctuate in response to the Fund's NAV, the intraday value of the Fund's holdings and supply and demand for Shares. The Adviser cannot predict whether Shares will trade above, below, or at their most recent NAV. Disruptions to creations and redemptions, the existence of market volatility or potential lack of an active trading market for Shares (including through a trading halt), as well as other factors, may result in Shares trading at a significant premium or discount to NAV or to the intraday value of the Fund's holdings. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses. The securities held by the Fund may be traded in markets that close at a different time than NYSE Arca. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when NYSE Arca is open but after the applicable market closing, fixing or settlement times, bid-ask spreads on NYSE Arca and the resulting premium or discount to the Shares' NAV may widen.

Risk of Cash Transactions. Unlike other exchange-traded funds (ETFs), the Fund expects to effect its creations and redemptions principally for cash, rather than in-kind securities. Therefore, it may be required to sell portfolio securities and subsequently recognize gains on such sales that the Fund might not have recognized if it were to distribute portfolio securities in kind. As such, investments in Shares may be less tax-efficient than an investment in a conventional ETF.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Brazil Small-Cap Index concentrates in a particular sector or sectors or industry or group of industries. To the extent that the Fund continues to be concentrated in the consumer discretionary sector, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that sector will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by comparing the Fund's performance from year to year and by showing how the Fund's average annual returns for the one year, five year and since inception periods compared with the Fund's benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.vaneck.com.

Annual Total Returns (%) Calendar Years

Best Quarter: 25.09% 3Q 10
Worst Quarter: -35.49% 3Q 15

VANECK VECTORS BRAZIL SMALL-CAP ETF (continued)**Average Annual Total Returns for the Periods Ended December 31, 2015**

The after-tax returns presented in the table below are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown below. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	Past One Year	Past Five Years	Since Inception (5/12/2009)
VanEck Vectors Brazil Small-Cap ETF (return before taxes)	-48.97%	-25.27%	-7.93%
VanEck Vectors Brazil Small-Cap ETF (return after taxes on distributions)	-49.77%	-26.33%	-9.19%
VanEck Vectors Brazil Small-Cap ETF (return after taxes on distributions and sale of Fund Shares)	-27.71%	-15.64%	-4.71%
MVIS Brazil Small-Cap Index (reflects no deduction for fees, expenses or taxes)	-48.50%	-24.57%	-7.29%

PORTFOLIO MANAGEMENT

Investment Adviser. Van Eck Associates Corporation.

Portfolio Managers. The following individuals are jointly and primarily responsible for the day-to-day management of the Fund's portfolio:

Name	Title with Adviser	Date Began Managing the Fund
Hao-Hung (Peter) Liao	Portfolio Manager	May 2009
George Chao	Portfolio Manager	May 2009

PURCHASE AND SALE OF FUND SHARES

For important information about the purchase and sale of Fund Shares, tax information and payments to broker-dealers and other financial intermediaries, please turn to Summary Information About Purchases and Sales of Fund Shares, Taxes and Payments to Broker-Dealers and Other Financial Intermediaries on page 60 of this Prospectus.

VANECK VECTORS™ EGYPT INDEX ETF***SUMMARY INFORMATION****INVESTMENT OBJECTIVE**

VanEck Vectors™ Egypt Index ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the MVIS™ Egypt Index (the Egypt Index).

FUND FEES AND EXPENSES

The following tables describe the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None
Annual Fund Operating Expenses
(expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.50%
Other Expenses	0.57%
Total Annual Fund Operating Expenses ^(a)	1.07%
Fee Waivers and Expense Reimbursement ^(a)	-0.09%

Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.98%
--	-------

^(a) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs, trading expenses, taxes and extraordinary expenses) from exceeding 0.94% of the Fund's average daily net assets per year until May 1, 2017. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same (except that the example incorporates the fee waiver and/or expense reimbursement arrangement for only the first year). Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR EXPENSES

1	\$	100
3	\$	331
5	\$	581
10	\$	1,298

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 57% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund will normally invest at least 80% of its total assets in securities that comprise the Fund's benchmark index. The Egypt Index includes securities of Egyptian companies. A company is generally considered to be an Egyptian company if it is incorporated in Egypt or is incorporated outside Egypt but generates at least 50% of its revenues (or, in certain circumstances, has at least 50% of its assets) in Egypt. Such companies may include micro-, small- and medium-capitalization companies. As of December 31, 2015, the Egypt Index included 26 securities of companies with a market

* Prior to May 1, 2016, the Fund's name was Market Vectors Egypt Index ETF.

VANECK VECTORS™ EGYPT INDEX ETF (continued)

capitalization range of between approximately \$100 million and \$4.9 billion and a weighted average market capitalization of \$1.2 billion. These amounts are subject to change. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

The Fund, using a passive or indexing investment approach will attempt to approximate the investment performance of the Egypt Index by investing in a portfolio of securities that generally replicates the Egypt Index. Under various circumstances or under certain market conditions, it may not be possible or practicable to purchase all of the securities in the Egypt Index or in the weighting of such securities in the Egypt Index. In these cases, the Fund may purchase a sample of securities in the Egypt Index or underweight or overweight a security in the Egypt Index.

The Fund is classified as a non-diversified fund and, therefore, may invest a greater percentage of its assets in a particular issuer. The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Egypt Index concentrates in an industry or group of industries. As of December 31, 2015, the Egypt Index was concentrated in the financial services sector, and each of the basic materials, consumer staples and telecommunications sectors represented a significant portion of the Egypt Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund, each of which could significantly and adversely affect the value of an investment in the Fund.

Special Risk Considerations of Investing in Egyptian Issuers. Investment in securities of Egyptian issuers involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, the imposition of capital controls, expropriation and/or nationalization of assets, confiscatory taxation, regional conflict, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, the impact on the economy as a result of civil unrest, and social instability as a result of religious, ethnic and/or socioeconomic unrest. Poor living standards, disparities of wealth and limitations on political freedom have contributed to the unstable environment. Unanticipated or sudden political or social developments may result in sudden and significant investment losses. Issuers in Egypt are subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are issuers in more developed markets, and therefore, all material information may not be available or reliable. These factors, among others, make investing in issuers located or operating in Egypt significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of the Fund's Shares.

The securities markets in Egypt are underdeveloped and may be less correlated to global economic cycles than those markets located in more developed countries. Securities markets in Egypt are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. These risks could cause the Fund's shares to trade at a significant premium or discount to its net asset value (NAV). Moreover, trading on securities markets may be suspended altogether, including the possibility that securities

markets may be closed for an extended period of time due to political and civil unrest.

The government in Egypt may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in Egypt. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in Egypt. For example, there may be prohibitions or substantial restrictions on foreign investing in Egypt's capital markets or in certain sectors or industries. Moreover, Egypt may require governmental approval or special licenses prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of Egypt and/or impose additional taxes on foreign investors. There may be a risk of loss due to the imposition of restrictions on repatriation of capital invested. Although there has been increasing economic liberalization and limited political liberalization in recent years, there is no guarantee that this trend will continue, particularly if there is a political transition.

In November 2016, the International Monetary Fund approved a \$12 billion loan to help Egypt restore macroeconomic stability and promote inclusive growth. In addition, Egypt introduced a series of economic reforms, including, among others, widening of the tax base, increasing energy subsidies, and allowing the Egyptian pound to float. While these measures are intended to foster Egypt's economic growth and development, there is no guarantee that they will continue or be successful.

Frontier markets can experience high rates of inflation, deflation and currency devaluation. The value of the Egyptian pound may be subject to a high degree of fluctuation. The Fund's assets will be invested primarily in equity securities of Egyptian

issuers and the income received by the Fund will be principally in Egyptian pounds. The Fund's exposure to the Egyptian pound and changes in value of the Egyptian pound versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and the Egyptian pound. In addition, there may be limitations or delays in the convertibility or repatriation of the Egyptian pound which would adversely affect the U.S. dollar value and/or liquidity of the Fund's investments denominated in the Egyptian pound, may impair the Fund's ability to achieve its investment objective and/or may impede the Fund's ability to satisfy redemption requests in a timely manner. For these or other reasons, the Fund could seek to suspend redemptions of Creation Units, including in the event that an emergency exists in which it is not reasonably practicable for the Fund to dispose of its securities or to determine its NAV. The Fund could also, among other things, limit or suspend creations of Creation Units. During the period that creations or redemptions are affected, the Fund's shares could trade at a significant premium or discount to their NAV. In the case of a period during which creations are suspended, the Fund could experience substantial redemptions, which may exacerbate the discount to NAV at which the Fund's shares trade, cause the Fund to experience increased transaction costs, and cause the Fund to make greater taxable distributions to shareholders of the Fund. When the Fund holds illiquid investments, its portfolio may be harder to value.

In Egypt, the marketability of quoted shares is limited due to the restricted opening hours of stock exchanges (normally 10:30 a.m. to 2:30 p.m., Sunday to Thursday), a narrow range of investors and a relatively high proportion of market value being concentrated in the hands of a relatively small number of shareholders. In addition, because Egyptian stock exchanges on which the Fund's portfolio securities may trade are open when the NYSE Arca is closed, the Fund may be subject to heightened risk associated with market movements.

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because certain foreign securities markets may be limited in size, the activity of large traders may have an undue influence on the prices of securities that trade in such markets. Because the Fund may invest in securities denominated in foreign currencies and some of the income received by the Fund may be in foreign currencies, changes in currency exchange rates may negatively impact the Fund's return. The risks of investing in emerging market countries are greater than risks associated with investments in foreign developed countries.

Risk of Investing in Frontier Market Issuers. Egypt is considered to be a frontier market. Frontier market countries generally have smaller economies and less developed capital markets than traditional emerging markets, and, as a result, the risks of investing in frontier market countries are magnified. Investments in securities of frontier market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

Risk of Investing in Depositary Receipts. The Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities. Depositary receipts are receipts listed on U.S. or foreign exchanges issued by banks or trust companies that entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market and, if not included in the Egypt Index, may negatively affect the Fund's ability to

replicate the performance of the Egypt Index.

Risk of Investing in the Financial Services Sector. To the extent that the Fund continues to be concentrated in the financial services sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the financial services sector. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates, by loan losses, which usually increase in economic downturns, and by credit rating downgrades. In addition, the financial services sector is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, some companies in the financial services sector perceived as benefitting from government intervention in the past may be subject to future government-imposed restrictions on their businesses or face increased government involvement in their operations. Increased government involvement in the financial services sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets may cause companies

VANECK VECTORS™ EGYPT INDEX ETF (continued)

operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in the Basic Materials Sector. To the extent that the basic materials sector continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the basic materials sector. Companies engaged in the production and distribution of basic materials may be adversely affected by changes in world events, political and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in the Consumer Staples Sector. To the extent that the consumer staples sector continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the consumer staples sector. Companies in the consumer staples sector may be adversely affected by changes in the worldwide economy, consumer spending, competition, demographics and consumer preferences, exploration and production spending.

Risk of Investing in the Telecommunications Sector. To the extent that the telecommunications sector continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the telecommunications sector. Companies in the telecommunications sector may be affected by industry competition, substantial capital requirements, government regulations and obsolescence of telecommunications products and services due to technological advancement.

Risk of Investing in Small- and Medium-Capitalization Companies. Small- and medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. In addition, these companies often have greater price volatility, lower trading volume, and less liquidity than larger more established companies. Returns on investments in securities of small-capitalization and medium-capitalization companies could trail the returns on investments in securities of large-capitalization companies.

Risk of Investing in Micro-Capitalization Companies. Micro-capitalization companies are subject to substantially greater risks of loss and price fluctuations because their earnings and revenues tend to be less predictable (and some companies may be experiencing significant losses), and their share prices tend to be more volatile and their markets less liquid than companies with larger market capitalizations. The shares of micro-capitalization companies tend to trade less frequently than those of larger, more established companies, which can adversely affect the pricing of these securities and the future ability to sell those securities.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have generally also experienced significantly more volatility in those returns, although under certain market conditions fixed income securities may have comparable or greater price volatility.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Egypt Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Egypt Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Egypt Index and raising cash to meet redemptions or deploying cash in connection with newly created Creation Units (defined herein). The Fund also bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the Egypt Index. In addition, the Fund may not invest in certain securities included in the Egypt Index, or invest in them in the exact proportions in which they are represented in the Egypt Index, due to legal and regulatory rules and limitations imposed by the government of Egypt, a lack of liquidity on stock exchanges in which such securities trade, potential adverse tax consequences or other regulatory reasons. Additionally, the Fund may not invest in certain securities included in the Egypt Index due to limitations or delays in the convertibility or repatriation of the Egyptian pound. In addition, the Fund maintains a tax reserve as a provision for Egyptian taxes while the Egypt Index does not. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its NAV based on fair value prices and the value of the Egypt Index is based on securities' closing prices on local foreign markets (i.e., the

value of the Egypt Index is not based on fair value prices), the Fund's ability to track the Egypt Index may be adversely affected. The Fund may also need to rely on borrowings to meet redemptions, which may lead to increased expenses. For tax efficiency purposes, the Fund may sell certain securities, and such sale may cause the Fund to realize a loss and deviate from the performance of the Egypt Index. In light of the above factors, including the maintenance of a tax reserve as a provision for Egyptian taxes, as discussed above, the Fund's return may deviate significantly from the return of the Egypt Index.

Authorized Participant Concentration Risk. The Fund may have a limited number of financial institutions that act as Authorized Participants (APs), none of which are obligated to engage in creation or redemption transactions. To the extent that those APs exit the business, or are unable to or choose not to process creation and/or redemption orders, and no other AP is able to step forward to create and redeem, Shares may trade like closed-end funds at a discount to NAV and possibly face trading halts and/or de-listing.

No Guarantee of Active Trading Market. While Shares are listed on NYSE Arca, there can be no assurance that an active trading market for the Shares will be maintained. Further, secondary markets may be subject to irregular trading activity, market dislocations, wide bid/ask spreads and extended trade settlement periods, which could cause a material decline in the Fund's NAV.

Trading Issues. Trading in Shares on NYSE Arca may be halted due to market conditions or for reasons that, in the view of NYSE Arca, make trading in Shares inadvisable. In addition, trading in Shares on NYSE Arca is subject to trading halts caused by extraordinary market volatility pursuant to NYSE Arca's circuit breaker rules. There can be no assurance that the requirements of NYSE Arca necessary to maintain the listing of the Fund will continue to be met or will remain unchanged.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Egypt Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

ETF Shares Trading and Premium/Discount Risk. The market prices of the Shares may fluctuate in response to the Fund's NAV, the intraday value of the Fund's holdings and supply and demand for Shares. The Adviser cannot predict whether Shares will trade above, below, or at their most recent NAV. Disruptions to creations and redemptions, the existence of market volatility or potential lack of an active trading market for Shares (including through a trading halt), as well as other factors, may result in Shares trading at a significant premium or discount to NAV or to the intraday value of the Fund's holdings. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses. The securities held by the Fund may be traded in markets that close at a different time than NYSE Arca. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when NYSE Arca is open but after the applicable market closing, fixing or settlement times, bid-ask spreads on NYSE Arca and the resulting premium or discount to the Shares' NAV may widen.

Risk of Cash Transactions. Unlike other exchange-traded funds (ETFs), the Fund expects to effect its creations and redemptions principally for cash, rather than in-kind securities. Therefore, it may be required to sell portfolio securities and subsequently recognize gains on such sales that the Fund might not have recognized if it were to

distribute portfolio securities in kind. As such, investments in Shares may be less tax-efficient than an investment in a conventional ETF.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single issuer. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds. The Fund may be particularly vulnerable to this risk because the Egypt Index is comprised of securities of a very limited number of issuers.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Egypt Index concentrates in a particular sector or sectors or industry or group of industries. To the extent that the Egypt Index continues to be concentrated in the financial services sector, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that sector will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

VANECK VECTORS™ EGYPT INDEX ETF (continued)**PERFORMANCE**

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing the Fund's performance from year to year and by showing how the Fund's average annual returns for the one year, five year and since inception periods compared with the Fund's benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.vaneck.com.

Annual Total Returns (%) Calendar Years

Best Quarter: 33.71% 1Q 12

Worst Quarter: -26.46% 3Q 11

Average Annual Total Returns for the Periods Ended December 31, 2015

The after-tax returns presented in the table below are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown below. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	Past One Year	Past Five Years	Since Inception (2/16/2010)
VanEck Vectors Egypt Index ETF (return before taxes)	-33.89%	-10.03%	-9.08%

VANECK VECTORS INDIA SMALL-CAP INDEX ETF***SUMMARY INFORMATION****INVESTMENT OBJECTIVE**

VanEck Vectors India Small-Cap Index ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the MVIS™ India Small-Cap Index (the India Small-Cap Index).

FUND FEES AND EXPENSES

The following tables describe the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50%
Other Expenses ^(a)	0.28%
Total Annual Fund Operating Expenses ^(b)	0.78%
Fee Waivers and Expense Reimbursement ^(b)	0.00%

Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement^(b) 0.78%

^(a) Other Expenses reflects the expenses at both the Fund and the Fund's wholly-owned subsidiary (the Subsidiary) levels.

^(b) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund and Subsidiary expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs, trading expenses, taxes and extraordinary expenses of the Fund and the Subsidiary) from exceeding 0.85% of the Fund's average daily net assets per year until at least May 1, 2017. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same (except that the example incorporates the fee waiver and/or expense reimbursement arrangement for only the first year). Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR EXPENSES

1	\$	80
3	\$	249
5	\$	433
10	\$	966

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 40% of the average value of its portfolio.

VANECK VECTORS INDIA SMALL-CAP INDEX ETF (continued)

PRINCIPAL INVESTMENT STRATEGIES

The Fund currently intends to achieve its investment objective by investing substantially all of its assets in the Subsidiary, a wholly-owned subsidiary located in the Republic of Mauritius ("Mauritius"). The Subsidiary in turn will normally invest at least 80% of its total assets in securities that comprise the Fund's benchmark index, and depositary receipts based on the securities in the Fund's benchmark index. The India Small-Cap Index includes Indian micro-, small- and medium-capitalization companies selected on the basis of their relative market capitalizations. For the purposes of the Fund's investment strategy, a company is generally considered an Indian company if it is incorporated in India or is incorporated outside of India but generates at least 50% of its revenues (or, in certain circumstances, has at least 50% of its assets) in India. As a result of the Fund's investment in the Subsidiary, the Fund will normally invest at least 80% of its total assets in securities of small-capitalization Indian companies. As of December 31, 2015, the India Small-Cap Index included 141 securities of companies with a market capitalization range of between approximately \$120 million and \$1.2 billion and a weighted average market capitalization of \$570 million. These amounts are subject to change. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders. The Adviser serves as investment adviser to both the Fund and the Subsidiary and, through this investment structure, the Subsidiary and the Fund expect to benefit from favorable tax treatment pursuant to a tax treaty between India and Mauritius (the "Treaty"), subject to the tax risks explained in this prospectus and the conditions for a favorable tax treatment (as specified in the Treaty) being met. Except where otherwise indicated, the term "Fund," as used throughout this Summary Section, refers to the Fund and/or the Subsidiary, as applicable.

The Fund, using a passive or indexing investment approach, will attempt to approximate the investment performance of the India Small-Cap Index by investing in a portfolio of securities that generally replicates the India Small-Cap Index.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the India Small-Cap Index concentrates in an industry or group of industries. As of December 31, 2015, the India Small-Cap Index was concentrated in the financial services sector, and each of the consumer discretionary and industrials sectors represented a significant portion of the India Small-Cap Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund, each of which could significantly and adversely affect the value of an investment in the Fund.

Special Risk Considerations of Investing in Indian Issuers. Investment in securities of Indian issuers involve special considerations not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, greater government control over the economy, including the risk that the Indian government may decide not to continue to support economic reform programs, political and legal uncertainty, currency fluctuations or blockage of foreign currency exchanges and the risk of nationalization or expropriation of assets. Issuers in India are subject to

less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are issuers in more developed markets, and therefore, all material information may not be available or reliable. India is also located in a part of the world that has historically been prone to natural disasters, such as earthquakes and tsunamis. Any such natural disaster could cause a significant impact on the Indian economy and could impact operations of the Subsidiary, causing an adverse impact on the Fund. In addition, religious and border disputes persist in India. Moreover, India has experienced civil unrest and hostilities with neighboring countries, including Pakistan, and the Indian government has confronted separatist movements in several Indian states. India has experienced acts of terrorism that has targeted foreigners. Such acts of terrorism have had a negative impact on tourism, an important sector of the Indian economy.

The securities market of India is considered an emerging market characterized by a small number of listed companies with significantly smaller market capitalizations, greater price volatility and substantially less liquidity than developed markets, such as the United States. These factors, coupled with restrictions on foreign investment and other factors, limit the supply of securities available for investment by the Fund. This will affect the rate at which the Fund is able to invest in India, the purchase and sale prices for such securities and the timing of purchases and sales. Emerging markets can experience high rates of inflation, deflation and currency devaluation. Certain restrictions on foreign investment may decrease the liquidity of the Fund's portfolio or inhibit the Fund's ability to track the India Small-Cap Index. In addition, the Reserve Bank of India (RBI), the Indian counterpart of the Federal Reserve Bank in the United States, imposes certain limits on the foreign ownership of Indian securities. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in India and may inhibit the Fund's ability to track the India Small-Cap Index.

The value of the Indian rupee may be subject to a high degree of fluctuation. The Fund's assets will be invested primarily in equity securities of Indian issuers and the income received by the Fund will be principally in Indian rupees. The Fund's exposure to the Indian rupee and changes in value of the Indian rupee versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and the Indian rupee.

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because certain foreign securities markets may be limited in size, the activity of large traders may have an undue influence on the prices of securities that trade in such markets. Because the Fund may invest in securities denominated in foreign currencies and some of the income received by the Fund may be in foreign currencies, changes in currency exchange rates may negatively impact the Fund's return. The risks of investing in emerging market countries are greater than risks associated with investments in foreign developed countries.

Risk of Investing in Emerging Market Issuers. Investments in securities of emerging market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

Risk of Investing in Depositary Receipts. The Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities. Depositary receipts are receipts listed on U.S. or foreign exchanges issued by banks or trust companies that entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market and, if not included in the India Small-Cap Index, may negatively affect the Fund's ability to replicate the performance of the India Small-Cap Index.

Risk of Investing in the Financial Services Sector. To the extent that the Fund continues to be concentrated in the financial services sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the financial services sector. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates, by loan losses, which usually increase in economic downturns, and by credit rating downgrades. In addition, the financial services sector is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, some companies in the financial services sector perceived as benefitting from government intervention in the past may be subject to future government-imposed restrictions on their businesses or face increased government involvement in their operations. Increased government involvement in the financial services sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets may cause companies operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in the Consumer Discretionary Sector. To the extent that the consumer discretionary continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the consumer discretionary sector. Companies engaged in the consumer discretionary sector are subject to fluctuations in supply and demand. These companies may also be adversely affected by changes in consumer spending as a result of world events, political and economic conditions, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in the Industrials Sector. To the extent that the industrials sector continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the industrials sector. Companies in the industrials sector may be adversely affected by changes in government regulation, world events and economic conditions. In addition, companies in the industrials sector may be adversely affected by environmental damages, product liability claims and exchange rates.

Risk of Investing in Small- and Medium-Capitalization Companies. Small- and medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. In addition, these companies often have greater price

VANECK VECTORS INDIA SMALL-CAP INDEX ETF (continued)

volatility, lower trading volume and less liquidity than larger more established companies. Returns on investments in securities of small-capitalization and medium-capitalization companies could trail the returns on investments in securities of large-capitalization companies.

Risk of Investing in Micro-Capitalization Companies. Micro-capitalization companies are subject to substantially greater risks of loss and price fluctuations because their earnings and revenues tend to be less predictable (and some companies may be experiencing significant losses), and their share prices tend to be more volatile and their markets less liquid than companies with larger market capitalizations. The shares of micro-capitalization companies tend to trade less frequently than those of larger, more established companies, which can adversely affect the pricing of these securities and the future ability to sell those securities.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have generally also experienced significantly more volatility in those returns, although under certain market conditions fixed income securities may have comparable or greater price volatility.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the India Small-Cap Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the India Small-Cap Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the India Small-Cap Index and raising cash to meet redemptions or deploying cash in connection with newly created Creation Units (defined herein). The Fund also bears the costs and risks associated with buying and selling securities while such costs are not factored in to the return of the India Small-Cap Index. In addition, the Fund may not be able to invest in certain securities included in the India Small-Cap Index or invest in them in the exact proportions in which they are represented in the India Small-Cap Index due to legal restrictions or limitations imposed by the government of India, a lack of liquidity on stock exchanges in which such securities trade, potential adverse tax consequences or other regulatory reasons (such as diversification requirements). The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the India Small-Cap Index is based on securities' closing prices on local foreign markets (*i.e.*, the value of the India Small-Cap Index is not based on fair value prices), the Fund's ability to track the India Small-Cap Index may be adversely affected. For tax efficiency purposes, the Fund may sell certain securities, and such sale may cause the Fund to realize a loss and deviate from the performance of the India Small-Cap Index. In light of the factors discussed above, the Fund's return may deviate significantly from the return of the India Small-Cap Index.

Authorized Participant Concentration Risk. The Fund may have a limited number of financial institutions that act as Authorized Participants (APs), none of which are obligated to engage in creation or redemption transactions. To the extent that those APs exit the business, or are unable to or choose not to process creation and/or redemption orders,

and no other AP is able to step forward to create and redeem, Shares may trade like closed-end funds at a discount to NAV and possibly face trading halts and/or de-listing.

No Guarantee of Active Trading Market. While Shares are listed on NYSE Arca, there can be no assurance that an active trading market for the Shares will be maintained. Further, secondary markets may be subject to irregular trading activity, market dislocations, wide bid/ask spreads and extended trade settlement periods, which could cause a material decline in the Fund's NAV.

Trading Issues. Trading in Shares on NYSE Arca may be halted due to market conditions or for reasons that, in the view of NYSE Arca, make trading in Shares inadvisable. In addition, trading in Shares on NYSE Arca is subject to trading halts caused by extraordinary market volatility pursuant to NYSE Arca's circuit breaker rules. There can be no assurance that the requirements of NYSE Arca necessary to maintain the listing of the Fund will continue to be met or will remain unchanged.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the India Small-Cap Index, the Fund generally would not sell a security

because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

ETF Shares Trading and Premium/Discount Risk. The market prices of the Shares may fluctuate in response to the Fund's NAV, the intraday value of the Fund's holdings and supply and demand for Shares. The Adviser cannot predict whether Shares will trade above, below, or at their most recent NAV. Disruptions to creations and redemptions, the existence of market volatility or potential lack of an active trading market for Shares (including through a trading halt), as well as other factors, may result in Shares trading at a significant premium or discount to NAV or to the intraday value of the Fund's holdings. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses. The securities held by the Fund may be traded in markets that close at a different time than NYSE Arca. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when NYSE Arca is open but after the applicable market closing, fixing or settlement times, bid-ask spreads on NYSE Arca and the resulting premium or discount to the Shares' NAV may widen.

Risk of Cash Transactions. Unlike other exchange-traded funds (ETFs), the Fund expects to effect its creations and redemptions principally for cash, rather than in-kind securities. Therefore, it may be required to sell portfolio securities and subsequently recognize gains on such sales that the Fund might not have recognized if it were to distribute portfolio securities in kind. As such, investments in Shares may be less tax-efficient than an investment in a conventional ETF.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the India Small-Cap Index concentrates in a particular sector or sectors or industry or group of industries. To the extent the India Small-Cap Index continues to be concentrated in the financial services sector, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that sector will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing the Fund's performance from year to year and by showing how the Fund's average annual returns for the one year, five year and since inception periods compared with the Fund's benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.58%
--	-------

^(a) The Adviser has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs, trading expenses, taxes and extraordinary expenses) from exceeding 0.57% of the Fund's average daily net assets per year until at least May 1, 2017. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same (except that the example incorporates the fee waiver and/or expense reimbursement arrangement for only the first year). Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR EXPENSES

1	\$	59
3	\$	216
5	\$	387
10	\$	881

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 11% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in securities that comprise the Fund's benchmark index. The Indonesia Index includes securities of Indonesian companies. A company is generally considered to be an Indonesian company if it is incorporated in Indonesia or is incorporated outside of Indonesia but generates at least 50% of its revenues

* Prior to

 Market
 Vectors
 Indonesia
 Index
 ETF.

VANECK VECTORS INDONESIA INDEX ETF (continued)

(or, in certain circumstances, has at least 50% of its assets) in Indonesia. Such companies may include small- and medium-capitalization companies. As of December 31, 2015, the Indonesia Index included 44 securities of companies with a market capitalization range of between approximately \$490 million and \$23.8 billion and a weighted average market capitalization of \$10.5 billion. These amounts are subject to change. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Indonesia Index by investing in a portfolio of securities that generally replicates the Indonesia Index. The Fund will normally invest at least 80% of its assets in securities that comprise the Indonesia Index.

The Fund is classified as a non-diversified fund and, therefore, may invest a greater percentage of its assets in a particular issuer. The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Indonesia Index concentrates in an industry or group of industries. As of December 31, 2015, the Indonesia Index was concentrated in the financial services sector, and each of the consumer discretionary, consumer staples and telecommunications sectors represented a significant portion of the Indonesia Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund, each of which could significantly and adversely affect the value of an investment in the Fund.

Special Risk Considerations of Investing in Indonesian Issuers. Investment in securities of Indonesian issuers involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, expropriation and/or nationalization of assets, restrictions on and government intervention in international trade, confiscatory taxation, currency devaluations, high rates of inflation, corruption, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, acts of terrorism, the impact on the economy as a result of civil war, and social instability as a result of religious, ethnic and/or socioeconomic unrest. In addition, the Indonesian economy is dependent upon trade with other nations, including China, Japan, Singapore and the United States. Indonesia has experienced acts of terrorism that have targeted foreigners. Such acts of terrorism have had a negative impact on tourism, an important sector of the Indonesia economy.

The securities markets of Indonesia are underdeveloped and are often considered to be less correlated to global economic cycles than those markets located in more developed countries. As a result, securities markets in Indonesia are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. Moreover, trading on securities markets may be suspended altogether.

The government in Indonesia may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in Indonesia. These restrictions and/or controls may at times limit or prevent

foreign investment in securities of issuers located or operating in Indonesia. Moreover, governmental approval or special licenses may be required prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of Indonesia and/or impose additional taxes on foreign investors. Indonesia's securities laws are unsettled and judicial enforcement of contracts with foreign entities is inconsistent and, as a result of pervasive corruption, is subject to the risk that cases will not be judged impartially. These factors, among others, make investing in issuers located or operating in Indonesia significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of the Fund's Shares.

The value of the Indonesian Rupiah may be subject to a high degree of fluctuation. The Fund's assets will be invested primarily in equity securities of Indonesian issuers and the income received by the Fund will be principally in Indonesian Rupiah. The Fund's exposure to the Indonesian Rupiah and changes in value of the Indonesian Rupiah versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and the Indonesian Rupiah.

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market

liquidity and political instability. Because certain foreign securities markets may be limited in size, the activity of large traders may have an undue influence on the prices of securities that trade in such markets. Because the Fund may invest in securities denominated in foreign currencies and some of the income received by the Fund may be in foreign currencies, changes in currency exchange rates may negatively impact the Fund's return. The risks of investing in emerging market countries are greater than risks associated with investments in foreign developed countries.

Risk of Investing in Emerging Market Issuers. Investments in securities of emerging market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

Risk of Investing in Depositary Receipts. The Fund may invest in depositary receipts which involve similar risks to those associated with foreign securities. Depositary receipts are receipts listed on U.S. or foreign exchanges issued by banks or trust companies that entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market and, if not included in the Indonesia Index, may negatively affect the Fund's ability to replicate the performance of the Indonesia Index.

Risk of Investing in the Financial Services Sector. To the extent that the Fund continues to be concentrated in the financial services sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the financial services sector. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates, by loan losses, which usually increase in economic downturns, and by credit rating downgrades. In addition, the financial services sector is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, some companies in the financial services sector perceived as benefitting from government intervention in the past may be subject to future government-imposed restrictions on their businesses or face increased government involvement in their operations. Increased government involvement in the financial services sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets may cause companies operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in the Consumer Discretionary Sector. To the extent that the consumer discretionary sector continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the consumer discretionary sector. Companies engaged in the consumer discretionary sector are subject to fluctuations in supply and demand. These companies may also be adversely affected by changes in consumer spending as a result of world events, political and economic conditions, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in the Consumer Staples Sector. To the extent that the consumer staples sector continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the consumer staples sector. These companies may be adversely

affected by changes in the worldwide economy, consumer spending, competition, demographics and consumer preferences, exploration and production spending.

Risk of Investing in the Telecommunications Sector. To the extent that the telecommunications sector continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the telecommunications sector. Companies in the telecommunications sector may be affected by industry competition, substantial capital requirements, government regulations and obsolescence of telecommunications products and services due to technological advancement.

Risk of Investing in Small- and Medium-Capitalization Companies. Small- and medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. In addition, these companies often have greater price volatility, lower trading volume and less liquidity than larger more established companies. Returns on investments in securities of small-capitalization and medium-capitalization companies could trail the returns on investments in securities of large-capitalization companies.

VANECK VECTORS INDONESIA INDEX ETF (continued)

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have generally also experienced significantly more volatility in those returns, although under certain market conditions fixed income securities may have comparable or greater price volatility.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Indonesia Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Indonesia Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Indonesia Index. The Fund also bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the Indonesia Index. In addition, the Fund may not be able to invest in certain securities included in the Indonesia Index, or invest in them in the exact proportions in which they are represented in the Indonesia Index, due to legal restrictions or limitations imposed by the government of Indonesia, a lack of liquidity on stock exchanges in which such securities trade, potential adverse tax consequences or other regulatory reasons. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the Indonesia Index is based on securities' closing prices on local foreign markets (*i.e.*, the value of the Indonesia Index is not based on fair value prices), the Fund's ability to track the Indonesia Index may be adversely affected. For tax efficiency purposes, the Fund may sell certain securities, and such sale may cause the Fund to realize a loss and deviate from the performance of the Indonesia Index. In light of the factors discussed above, the Fund's return may deviate significantly from the return of the Indonesia Index.

Authorized Participant Concentration Risk. The Fund may have a limited number of financial institutions that act as Authorized Participants (APs), none of which are obligated to engage in creation or redemption transactions. To the extent that those APs exit the business, or are unable to or choose not to process creation and/or redemption orders, and no other AP is able to step forward to create and redeem, Shares may trade like closed-end funds at a discount to NAV and possibly face trading halts and/or de-listing.

No Guarantee of Active Trading Market. While Shares are listed on NYSE Arca, there can be no assurance that an active trading market for the Shares will be maintained. Further, secondary markets may be subject to irregular trading activity, market dislocations, wide bid/ask spreads and extended trade settlement periods, which could cause a material decline in the Fund's NAV.

Trading Issues. Trading in Shares on NYSE Arca may be halted due to market conditions or for reasons that, in the view of NYSE Arca, make trading in Shares inadvisable. In addition, trading in Shares on NYSE Arca is subject to trading halts caused by extraordinary market volatility pursuant to NYSE Arca's circuit breaker rules. There can be no assurance that the requirements of NYSE Arca necessary to maintain the listing of the Fund will continue to be met or will remain unchanged.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Indonesia Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

ETF Shares Trading and Premium/Discount Risk. The market prices of the Shares may fluctuate in response to the Fund's NAV, the intraday value of the Fund's holdings and supply and demand for Shares. The Adviser cannot predict whether Shares will trade above, below, or at their most recent NAV. Disruptions to creations and redemptions, the existence of market volatility or potential lack of an active trading market for Shares (including through a trading halt), as well as other factors, may result in Shares trading at a significant premium or discount to NAV or to the intraday value of the Fund's holdings. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses. The securities held by the Fund may be traded in markets that close at a different time than NYSE Arca. Liquidity in those securities may be reduced after

the applicable closing times. Accordingly, during the time when NYSE Arca is open but after the applicable market closing, fixing or settlement times, bid-ask spreads on NYSE Arca and the resulting premium or discount to the Shares' NAV may widen.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single issuer. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Indonesia Index concentrates in a particular sector or sectors or industry or group of industries. To the extent that the Indonesia Index continues to be concentrated in the financial services sector, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that sector will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by comparing the Fund's performance from year to year and by showing how the Fund's average annual returns for the one year, five year and since inception periods compared with the Fund's benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.vaneck.com.

Annual Total Returns (%) Calendar Years

Best Quarter: 18.73% 1Q 14

Worst Quarter: -24.79% 3Q 15

Average Annual Total Returns for the Periods Ended December 31, 2015

The after-tax returns presented in the table below are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown below. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	Past One Year	Past Five Years	Since Inception (1/15/2009)
VanEck Vectors Indonesia Index ETF (return before taxes)	-22.69%	-6.59%	14.10%

VANECK VECTORS ISRAEL ETF*

SUMMARY INFORMATION

INVESTMENT OBJECTIVE

VanEck Vectors Israel ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the BlueStar Israel Global Index™ (the Israel Index).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None
Annual Fund Operating Expenses
(expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.50%
Other Expenses	0.35%

Total Annual Fund Operating Expenses ^(a)	0.85%
Fee Waivers and Expense Reimbursement ^(a)	-0.26%

Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.59%
--	-------

^(a) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs, trading expenses, taxes and extraordinary expenses) from exceeding 0.59% of the Fund's average daily net assets per year until at least May 1, 2017. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same (except that the example incorporates the fee waiver and/or expense reimbursement arrangement for only the first year). Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR EXPENSES

1	\$	60
3	\$	245
5	\$	446
10	\$	1,025

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 18% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in securities that comprise the Fund's benchmark index. The Israel Index is comprised of equity securities, which may include depositary receipts, of publicly traded companies that are generally considered by BlueStar Global Investors, LLC (BlueStar or the Index Provider) to be Israeli companies. The Israel Index

* Prior to May 1, 2016, the Fund's name was Market Vectors Israel ETF.

VANECK VECTORS ISRAEL ETF (continued)

Provider considers a range of factors such as domicile, country of company formation/founding, primary location of management, operations and/or research and development facilities, tax status, location of revenues and employees, among others, when determining whether a company will be included in the Israel Index. Such companies may include micro-, small- and medium-capitalization companies. The Fund may also utilize depositary receipts to seek performance that corresponds to the Fund's benchmark index. Investments in depositary receipts of Israeli companies whose securities are represented in the Israel Index will count towards satisfaction of the Fund's 80% investment policy. As of December 31, 2015, the Israel Index included 113 securities of companies with a market capitalization range of between approximately \$71 million and \$67 billion and a weighted average market capitalization of \$14 billion. These amounts are subject to change. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Israel Index by investing in a portfolio of securities that generally replicates the Israel Index.

The Fund is classified as a non-diversified fund and, therefore, may invest a greater percentage of its assets in a particular issuer. The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Israel Index concentrates in an industry or group of industries. As of December 31, 2015, the Israel Index was concentrated in the health care and information technology sectors, and the financial services sector represented a significant portion of the Israel Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund, each of which could significantly and adversely affect the value of an investment in the Fund.

Special Risk Considerations of Investing in Israeli Issuers. Investment in securities of Israeli issuers involves risks that may negatively affect the value of your investment in the Fund. Among other things, Israel's economy depends on imports of certain key items, such as crude oil, natural gas, coal, grains, raw materials, and military equipment. Israel's relations with the Palestinian Authority and certain neighboring countries such as Lebanon, Syria and Iran, among others, have at times been strained due to territorial disputes, historical animosities or security concerns, which may cause uncertainty in the Israeli markets and adversely affect the overall economy. Furthermore, Israel's economy is heavily dependent upon trade relationships with key counterparties around the world. Any reduction in these trade flows may have an adverse impact on the Fund's investments.

Israel has experienced a history of hostile relations with several countries in the Mid-East region. Israel and its citizens have also been the target of periodic acts of terrorism that have the potential to disrupt economic activity in the country, and certain terrorist groups are committed to violence against Israel. Current hostilities and the potential for future hostilities may diminish the value of companies whose principal operations or headquarters are located in Israel. Actual hostilities or the threat of future hostilities may cause significant volatility in the share price of companies based in or having significant operations in Israel.

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because certain foreign securities markets may be limited in size, the activity of large traders may have an undue influence on the prices of securities that trade in such markets. Because the Fund may invest in securities denominated in foreign currencies and some of the income received by the Fund may be in foreign currencies, changes in currency exchange rates may negatively impact the Fund's return. The risks of investing in emerging market countries are greater than risks associated with investments in foreign developed countries.

Risk of Investing in the Health Care Sector. To the extent that the Fund continues to be concentrated in the health care sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the health care sector. Companies in the health care sector may be affected by extensive government regulation, restrictions on government reimbursement for medical expenses, rising costs of medical products and services, pricing pressure, an increased emphasis on outpatient services, limited number of products, industry innovation, changes in technologies and other market developments. Many health care companies are heavily dependent on patent protection and are subject to extensive litigation based on product liability and similar claims.

Risk of Investing in the Information Technology Sector. To the extent that the Fund continues to be concentrated in the information technology sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent

on, the overall condition of the information technology sector. Information technology companies face intense competition, both domestically and internationally, which may have an adverse effect on profit margins. Information technology companies may have limited product lines, markets, financial resources or personnel. The products of information technology companies may face product obsolescence due to rapid technological developments and frequent new product introduction, unpredictable changes in growth rates and competition for the services of qualified personnel. Companies in the information technology sector are heavily dependent on patent protection and the expiration of patents may adversely affect the profitability of these companies.

Risk of Investing in the Financial Services Sector. To the extent that the financial services sector continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the financial services sector. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates, by loan losses, which usually increase in economic downturns, and by credit rating downgrades. In addition, the financial services sector is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, some companies in the financial services sector perceived as benefitting from government intervention in the past may be subject to future government-imposed restrictions on their businesses or face increased government involvement in their operations. Increased government involvement in the financial services sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets may cause companies operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in Depositary Receipts. The Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities. Depositary receipts are receipts listed on U.S. or foreign exchanges issued by banks or trust companies that entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market and, if not included in the Israel Index, may negatively affect the Fund's ability to replicate the performance of the Israel Index.

Risk of Investing in Small- and Medium-Capitalization Companies. Small- and medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. In addition, these companies often have greater price volatility, lower trading volume, and less liquidity than larger more established companies. Returns on investments in securities of small-capitalization and medium-capitalization companies could trail the returns on investments in securities of large-capitalization companies.

Risk of Investing in Micro-Capitalization Companies. Micro-capitalization companies are subject to substantially greater risks of loss and price fluctuations because their earnings and revenues tend to be less predictable (and some companies may be experiencing significant losses), and their share prices tend to be more volatile and their markets less liquid than companies with larger market capitalizations. The shares of micro-capitalization companies tend to trade less frequently than those of larger, more established companies, which can adversely affect the pricing of these securities and the future ability to sell those securities.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate,

or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have generally also experienced significantly more volatility in those returns, although under certain market conditions fixed income securities may have comparable or greater price volatility.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Israel Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Israel Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Israel Index. The Fund also bears the costs and risks associated with buying and selling securities while such costs and risks

VANECK VECTORS ISRAEL ETF (continued)

are not factored into the return of the Israel Index. In addition, the Fund may not invest in certain securities or types of securities included in the Israel Index, or invest in them in the exact proportions in which they are represented in the Israel Index, due to legal restrictions or limitations imposed by the government of Israel, a lack of liquidity on stock exchanges in which such securities trade, potential adverse tax consequences or other regulatory reasons. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the Israel Index is based on securities' closing prices on local foreign markets (*i.e.*, the value of the Israel Index is not based on fair value prices), the Fund's ability to track the Israel Index may be adversely affected. For tax efficiency purposes, the Fund may sell certain securities, and such sale may cause the Fund to realize a loss and deviate from the performance of the Israel Index. In light of the factors discussed above, the Fund's return may deviate significantly from the return of the Israel Index.

Authorized Participant Concentration Risk. The Fund may have a limited number of financial institutions that act as Authorized Participants (APs), none of which are obligated to engage in creation or redemption transactions. To the extent that those APs exit the business, or are unable to or choose not to process creation and/or redemption orders, and no other AP is able to step forward to create and redeem, Shares may trade like closed-end funds at a discount to NAV and possibly face trading halts and/or de-listing.

No Guarantee of Active Trading Market. While Shares are listed on NYSE Arca, there can be no assurance that an active trading market for the Shares will be maintained. Further, secondary markets may be subject to irregular trading activity, market dislocations, wide bid/ask spreads and extended trade settlement periods, which could cause a material decline in the Fund's NAV.

Trading Issues. Trading in Shares on NYSE Arca may be halted due to market conditions or for reasons that, in the view of NYSE Arca, make trading in Shares inadvisable. In addition, trading in Shares on NYSE Arca is subject to trading halts caused by extraordinary market volatility pursuant to NYSE Arca's circuit breaker rules. There can be no assurance that the requirements of NYSE Arca necessary to maintain the listing of the Fund will continue to be met or will remain unchanged.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Israel Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

ETF Shares Trading and Premium/Discount Risk. The market prices of the Shares may fluctuate in response to the Fund's NAV, the intraday value of the Fund's holdings and supply and demand for Shares. The Adviser cannot predict whether Shares will trade above, below, or at their most recent NAV. Disruptions to creations and redemptions, the existence of market volatility or potential lack of an active trading market for Shares (including through a trading halt), as well as other factors, may result in Shares trading at a significant premium or discount to NAV or to the intraday value of the Fund's holdings. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses. The securities held by the Fund may be traded in markets that close at a different time than NYSE Arca. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time

when NYSE Arca is open but after the applicable market closing, fixing or settlement times, bid-ask spreads on NYSE Arca and the resulting premium or discount to the Shares' NAV may widen.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single issuer. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Israel Index concentrates in a particular sector or sectors or industry or group of industries. To the extent that the Israel Index continues to be concentrated in the health care and information technology sectors, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on those sectors will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing the Fund's performance from year to year and by showing how the Fund's average annual returns for the one year and since inception periods compared with the Fund's benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.vaneck.com.

Annual Total Returns (%) Calendar Years

Best Quarter: 6.79% 1Q 14

PURCHASE AND SALE OF FUND SHARES

For important information about the purchase and sale of Fund Shares, tax information and payments to broker-dealers and other financial intermediaries, please turn to Summary Information About Purchases and Sales of Fund Shares, Taxes and Payments to Broker-Dealers and Other Financial Intermediaries on page 60 of this Prospectus.

VANECK VECTORS POLAND ETF***SUMMARY INFORMATION****INVESTMENT OBJECTIVE**

VanEck Vectors Poland ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the MVIS™ Poland Index (the Poland Index).

FUND FEES AND EXPENSES

The following tables describe the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None
Annual Fund Operating Expenses
(expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.50%
Other Expenses	0.61%

Total Annual Fund Operating Expenses ^(a)	1.11%
Fee Waivers and Expense Reimbursement ^(a)	-0.51%

Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.60%
--	-------

^(a) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs, trading expenses, taxes and extraordinary expenses) from exceeding 0.60% of the Fund's average daily net assets per year until at least May 1, 2017. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same (except that the example incorporates the fee waiver and/or expense reimbursement arrangement for only the first year). Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR EXPENSES

1	\$	61
3	\$	302
5	\$	562
10	\$	1,306

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 30% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in securities that comprise the Fund's benchmark index. The Poland Index includes securities of Polish companies. A company is generally considered to be a Polish company if it is incorporated in Poland or is incorporated outside of Poland but generates at least 50% of its revenues (or, in certain

* Prior to May 1, 2016, the Fund's name was Market Vectors Poland ETF.

circumstances, has at least 50% of its assets) in Poland. Such companies may include small- and medium-capitalization companies. As of December 31, 2015, the Poland Index included 26 securities of companies with a market capitalization range of between approximately \$320 million and \$9.5 billion and a weighted average market capitalization of \$4.9 billion. These amounts are subject to change. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Poland Index by investing in a portfolio of securities that generally replicates the Poland Index. The Fund will normally invest at least 80% of its assets in securities that comprise the Poland Index.

The Fund is classified as a non-diversified fund and, therefore, may invest a greater percentage of its assets in a particular issuer. The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Poland Index concentrates in an industry or group of industries. As of December 31, 2015, the Poland Index was concentrated in the financial services sector, and each of the energy and utilities sectors represented a significant portion of the Poland Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund, each of which could significantly and adversely affect the value of an investment in the Fund.

Special Risk Considerations of Investing in Polish Issuers. Investment in securities of Polish issuers involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, restrictions on and government intervention in international trade, and the impact on the economy as a result of regional conflict, political instability, armed conflict, and social instability as a result of religious, ethnic and/or socioeconomic unrest. Furthermore, events and evolving conditions in certain European countries have greatly increased market volatility due to concerns about high levels of government debt, credit rating downgrades of sovereign debt and uncertainty about the future use of the Euro as a common currency. Responses to the financial problems by European governments, central banks and other bodies, including austerity measures and reforms may not work, may result in social unrest and may limit future economic growth or have other uncertain or unintended consequences. These events have adversely affected the exchange rate of the Euro and may continue to significantly affect every country in Europe. One or more countries may abandon the Euro and/or withdraw from the European Union (EU), which could have significant and far-reaching consequences. In addition, the Polish economy, along with certain other EU nations, experienced a significant slowdown during the recent financial crisis. Poland's economy is dependent upon the export of raw materials and consumer goods. Poland is dependent on trading relationships with certain key trading partners, including Germany and other EU nations and as a result may be affected if demand for Poland's exports in those nations declines.

The securities markets in Poland are underdeveloped and are less correlated to global economic cycles than those markets located in more developed countries. As a result, securities markets in Poland are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of

labor and industry. Moreover, trading on securities markets may be suspended altogether.

The government in Poland may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in Poland. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in Poland. Moreover, Poland may require governmental approval or special licenses prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of Poland and/or impose additional taxes on foreign investors. These factors, among others, make investing in issuers located or operating in Poland significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of the Fund's Shares.

The value of the Polish Zloty may be subject to a high degree of fluctuation. The Fund's assets will be invested primarily in equity securities of Polish issuers and the income received by the Fund will be principally in Polish Zloty. The Fund's exposure to the Polish Zloty and changes in value of the Polish Zloty versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and the Polish Zloty.

VANECK VECTORS POLAND ETF (continued)

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because certain foreign securities markets may be limited in size, the activity of large traders may have an undue influence on the prices of securities that trade in such markets. Because the Fund may invest in securities denominated in foreign currencies and some of the income received by the Fund may be in foreign currencies, changes in currency exchange rates may negatively impact the Fund's return. The risks of investing in emerging market countries are greater than risks associated with investments in foreign developed countries.

Risk of Investing in Emerging Market Issuers. Investments in securities of emerging market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

Risk of Investing in Depositary Receipts. The Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities. Depositary receipts are receipts listed on U.S. or foreign exchanges issued by banks or trust companies that entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market and, if not included in the Poland Index, may negatively affect the Fund's ability to replicate the performance of the Poland Index.

Risk of Investing in the Financial Services Sector. To the extent that the Fund continues to be concentrated in the financial services sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the financial services sector. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates, by loan losses, which usually increase in economic downturns, and by credit rating downgrades. In addition, the financial services sector is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, some companies in the financial services sector perceived as benefitting from government intervention in the past may be subject to future government-imposed restrictions on their businesses or face increased government involvement in their operations. Increased government involvement in the financial services sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets may cause companies operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in the Energy Sector. To the extent that the energy sector continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the energy sector. Companies operating in the energy sector are subject to risks including, but not limited to, economic growth, worldwide demand, political instability in the regions that the companies operate, government regulation stipulating rates charged by utilities, interest rate sensitivity, oil price volatility, energy

conservation, environmental policies, depletion of resources and the cost of providing the specific utility services. Recently, the price of oil has declined significantly and experienced significant volatility, which has adversely impacted companies operating in the energy sector. In addition, these companies are at risk of civil liability from accidents resulting in injury, loss of life or property, pollution or other environmental damage claims and risk of loss from terrorism and natural disasters.

Risk of Investing in the Utilities Sector. To the extent that the utilities sector continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the utilities sector. Companies in the utilities sector may be adversely affected by changes in exchange rates, domestic and international competition, difficulty in raising adequate amounts of capital and governmental limitation on rates charged to customers.

Risk of Investing in Small- and Medium-Capitalization Companies. Small- and medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. In addition, these companies often have greater price volatility, lower trading volume and less liquidity than larger more established companies. Returns on investments in securities

of small-capitalization and medium-capitalization companies could trail the returns on investments in securities of large-capitalization companies.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have generally also experienced significantly more volatility in those returns, although under certain market conditions fixed income securities may have comparable or greater price volatility.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Poland Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Poland Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Poland Index. The Fund also bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the Poland Index. In addition, the Fund may not be able to invest in certain securities included in the Poland Index, or invest in them in the exact proportions in which they are represented in the Poland Index, due to legal restrictions or limitations imposed by the government of Poland, a lack of liquidity on stock exchanges in which such securities trade, potential adverse tax consequences or other regulatory reasons. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the Poland Index is based on securities' closing prices on local foreign markets (*i.e.*, the value of the Poland Index is not based on fair value prices), the Fund's ability to track the Poland Index may be adversely affected. For tax efficiency purposes, the Fund may sell certain securities, and such sale may cause the Fund to realize a loss and deviate from the performance of the Poland Index. In light of the factors discussed above, the Fund's return may deviate significantly from the return of the Poland Index.

Authorized Participant Concentration Risk. The Fund may have a limited number of financial institutions that act as Authorized Participants (APs), none of which are obligated to engage in creation or redemption transactions. To the extent that those APs exit the business, or are unable to or choose not to process creation and/or redemption orders, and no other AP is able to step forward to create and redeem, Shares may trade like closed-end funds at a discount to NAV and possibly face trading halts and/or de-listing.

No Guarantee of Active Trading Market. While Shares are listed on NYSE Arca, there can be no assurance that an active trading market for the Shares will be maintained. Further, secondary markets may be subject to irregular trading activity, market dislocations, wide bid/ask spreads and extended trade settlement periods, which could cause a material decline in the Fund's NAV.

Trading Issues. Trading in Shares on NYSE Arca may be halted due to market conditions or for reasons that, in the view of NYSE Arca, make trading in Shares inadvisable. In addition, trading in Shares on NYSE Arca is subject to trading halts caused by extraordinary market volatility pursuant to NYSE Arca's "circuit breaker" rules. There can be no assurance that the requirements of NYSE Arca necessary to maintain the listing of the Fund will continue to be met

or will remain unchanged.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Poland Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

ETF Shares Trading and Premium/Discount Risk. The market prices of the Shares may fluctuate in response to the Fund's NAV, the intraday value of the Fund's holdings and supply and demand for Shares. The Adviser cannot predict whether Shares will trade above, below, or at their most recent NAV. Disruptions to creations and redemptions, the existence of market volatility or potential lack of an active trading market for Shares (including through a trading halt), as well as other factors, may result in Shares trading at a significant premium or discount to NAV or to the intraday value of the Fund's holdings. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a

VANECK VECTORS POLAND ETF (continued)

time when the market price is at a discount to the NAV, the shareholder may sustain losses. The securities held by the Fund may be traded in markets that close at a different time than NYSE Arca. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when NYSE Arca is open but after the applicable market closing, fixing or settlement times, bid-ask spreads on NYSE Arca and the resulting premium or discount to the Shares' NAV may widen.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single issuer. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Poland Index concentrates in a particular sector or sectors or industry or group of industries. To the extent that the Poland Index continues to be concentrated in the financial services sector, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that sector will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by comparing the Fund's performance from year to year and by showing how the Fund's average annual returns for the one year, five year and since inception periods compared with the Fund's benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. assumptions, your costs would be:

YEAR EXPENSES

1	\$	68
3	\$	225
5	\$	396
10	\$	890

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 33% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in securities that comprise the Fund's benchmark index. The Russia Index includes securities, which may include depositary receipts, of Russian companies. A company is generally considered to be a Russian company if it is incorporated in Russia or is incorporated outside of Russia but generates at least 50% of its

* Prior to May 1, 2016, the Fund's name was Market Vectors Russia ETF.

revenues (or, in certain circumstances, has at least 50% of its assets) in Russia. Such companies may include medium-capitalization companies. The Fund may utilize depositary receipts to seek performance that corresponds to the Fund's benchmark index. Investments in depositary receipts of Russian companies whose securities are represented in the Russia Index, and investments in securities of Russian companies for which the Russia Index holds depositary receipts, will count towards the Fund's 80% investment policy. As of December 31, 2015, the Russia Index included 28 securities of companies with a market capitalization range of between approximately \$2.7 billion and \$43.7 billion and a weighted average market capitalization of \$16.9 billion. These amounts are subject to change. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

The Fund is classified as a non-diversified fund and, therefore, may invest a greater percentage of its assets in a particular issuer. The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Russia Index by investing in a portfolio of securities that generally replicates the Russia Index.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Russia Index concentrates in an industry or group of industries. As of December 31, 2015, the Russia Index was concentrated in the energy sector, and each of the basic materials, consumer staples and financial services sectors represented a significant portion of the Russia Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund, each of which could significantly and adversely affect the value of an investment in the Fund.

Special Risk Considerations of Investing in Russian Issuers. Investment in securities of Russian issuers involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, expropriation and/or nationalization of assets, restrictions on and government intervention in international trade, confiscatory or punitive taxation, regional conflict, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, the imposition of economic sanctions by other nations, the impact on the economy as a result of civil unrest, and social instability as a result of religious, ethnic and/or socioeconomic unrest.

The securities markets of Russia are underdeveloped and are often considered to be less correlated to global economic cycles than those markets located in more developed countries. As a result, securities markets in Russia are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. Additionally, certain investments in Russia may become less liquid in response to market developments or adverse investor perceptions, or become illiquid after purchase by the Fund, particularly during periods of market turmoil. When the Fund holds illiquid investments, its portfolio may be harder to value, especially in changing markets. Moreover, trading on securities markets in Russia may be suspended altogether.

The government in Russia may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in Russia. These restrictions and/or controls may at times limit or prevent

foreign investment in securities of issuers located or operating in Russia. Moreover, governmental approval or special licenses may be required prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of Russia and/or impose additional taxes on foreign investors. Less information may be available about companies in which the Fund invests because many companies that are tied economically to Russia are not subject to accounting, auditing and financial reporting standards or to other regulatory practices required by U.S. companies. These factors, among others, make investing in issuers located or operating in Russia significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of the Fund's Shares.

As a result of recent events involving Ukraine and Russia, the United States and the European Union have imposed sanctions on certain Russian entities and individuals and certain sectors of Russia's economy, which may result in, among other things, the devaluation of Russian currency, a downgrade in the country's credit rating, and/or a decline in the value and liquidity of Russian securities, property or interests. The United States and other nations or international organizations may impose additional economic sanctions or take other actions that may adversely affect Russia-exposed issuers and companies in various sectors of the Russian economy, including, but not limited to, the financial services, energy, metals and mining, engineering, and defense and defense-related materials sectors. These sanctions, any future sanctions or other actions, or

VANECK VECTORS RUSSIA ETF (continued)

even the threat of further sanctions or other actions, may negatively affect the value and liquidity of the Fund's portfolio and may impair the Fund's ability to achieve its investment objective. For example, the Fund may be prohibited from investing in securities issued by companies subject to such sanctions. In addition, the sanctions may require the Fund to freeze its existing investments in Russian companies, prohibiting the Fund from buying, selling or otherwise transacting in these investments. Russia has undertaken and may undertake additional countermeasures or retaliatory actions which may further impair the value and liquidity of the Fund's portfolio and potentially disrupt its operations.

For these or other reasons, the Fund could seek to suspend redemptions of Creation Units, including in the event that an emergency exists in which it is not reasonably practicable for the Fund to dispose of its securities or to determine its net asset value (NAV). The Fund could also, among other things, limit or suspend creations of Creation Units. During the period that creations or redemptions are affected, the Fund's shares could trade at a significant premium or discount to their NAV. In the case of a period during which creations are suspended, the Fund could experience substantial redemptions, which may exacerbate the discount to NAV at which the Fund's shares trade, cause the Fund to experience increased transaction costs, and cause the Fund to make greater taxable distributions to shareholders of the Fund. The Fund may also change its investment objective by, for example, seeking to track an alternative index, or the Fund could liquidate all or a portion of its assets, which may be at unfavorable prices.

Despite recent reform and privatization, the Russian government continues to control a large share of economic activity in the region. The Russian government owns shares in corporations in a range of sectors including banking, energy production and distribution, automotive, transportation and telecommunications. Additionally, because Russia produces and exports large volumes of oil and gas, the Russian economy is particularly sensitive to the price of oil and gas on the world market, and a decline in the price of oil and gas could have a significant negative impact on the Russian economy.

The value of the Russian Ruble may be subject to a high degree of fluctuation. The Fund's assets will be invested primarily in equity securities of Russian issuers and the income received by the Fund will be principally in Russian Rubles. The Fund's exposure to the Russian Ruble and changes in value of the Russian Ruble versus the U.S. dollar may result in reduced returns to the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and the Russian Ruble. In addition, current political and economic events in Russia and the effects of the recent global economic crisis on the Russian economy may have significant adverse effects on the Russian Ruble and on the value and liquidity of the Fund's investments.

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because certain foreign securities markets may be limited in size, the activity of large traders may have an undue influence on the prices of securities that trade in such markets. Because the Fund may invest in securities denominated in foreign currencies and some of the income received by the Fund may be in foreign currencies, changes in currency exchange rates may negatively impact the Fund's return. The risks of investing in emerging market countries are greater than risks associated with investments in foreign developed countries.

Risk of Investing in Emerging Market Issuers. Investments in securities of emerging market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include

unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

Risk of Investing in Depositary Receipts. The Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities. Depositary receipts are receipts listed on U.S. or foreign exchanges issued by banks or trust companies that entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market and, if not included in the Russia Index, may negatively affect the Fund's ability to replicate the performance of the Russia Index.

Risk of Investing in the Energy Sector. To the extent that the Fund continues to be concentrated in the energy sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the energy sector. Companies operating in the energy sector are subject to risks including, but not limited to, economic growth, worldwide demand, political instability in the regions that the companies operate, government regulation stipulating rates charged by utilities, interest rate sensitivity, oil price volatility, energy conservation, environmental policies, depletion of resources and the cost of providing the specific utility services. Recently, the price of oil has declined significantly and

experienced significant volatility, which has adversely impacted companies operating in the energy sector. In addition, these companies are at risk of civil liability from accidents resulting in injury, loss of life or property, pollution or other environmental damage claims and risk of loss from terrorism and natural disasters.

Risk of Investing in the Basic Materials Sector. To the extent that the basic materials sector continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the basic materials sector. Companies engaged in the production and distribution of basic materials may be adversely affected by changes in world events, political and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in the Consumer Staples Sector. To the extent that the consumer staples sector continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the consumer staples sector. These companies may be adversely affected by changes in the worldwide economy, consumer spending, competition, demographics and consumer preferences, exploration and production spending.

Risk of Investing in the Financial Services Sector. To the extent that the financial services sector continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the financial services sector. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates, by loan losses, which usually increase in economic downturns, and by credit rating downgrades. In addition, the financial services sector is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, some companies in the financial services sector perceived as benefitting from government intervention in the past may be subject to future government-imposed restrictions on their businesses or face increased government involvement in their operations. Increased government involvement in the financial services sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets may cause companies operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in Medium-Capitalization Companies. Medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. In addition, these companies often have greater price volatility, lower trading volume and less liquidity than larger more established companies. Returns on investments in securities of these companies could trail the returns on investments in securities of large-capitalization companies.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have generally also experienced significantly more volatility in those returns, although under certain market conditions fixed income securities may have comparable or greater price volatility.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Russia Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Russia Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Russia Index and raising cash to meet redemptions or deploying cash with newly created Creation Units (defined herein). The Fund also bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the Russia Index. In addition, the Fund may not be able to invest in certain securities included in the Russia Index, or invest in them in the exact proportions in which they are represented in the Russia Index, due to legal restrictions or limitations imposed by the government of Russia, a lack of liquidity on stock exchanges in which such securities trade, potential adverse tax consequences or other regulatory reasons. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its NAV based on fair value prices and the

VANECK VECTORS RUSSIA ETF (continued)

value of the Russia Index is based on securities' closing prices on local foreign markets (*i.e.*, the value of the Russia Index is not based on fair value prices), the Fund's ability to track the Russia Index may be adversely affected. In the event economic sanctions are imposed by the United States against certain Russian companies, the Fund may not be able to fully replicate the Russia Index by investing in the relevant securities, which may lead to increased tracking error. The Fund may also need to rely on borrowings to meet redemptions, which may lead to increased expenses. For tax efficiency purposes, the Fund may sell certain securities, and such sale may cause the Fund to realize a loss and deviate from the performance of the Russia Index. In light of the factors discussed above, the Fund's return may deviate significantly from the return of the Russia Index.

Authorized Participant Concentration Risk. The Fund may have a limited number of financial institutions that act as Authorized Participants (APs), none of which are obligated to engage in creation or redemption transactions. To the extent that those APs exit the business, or are unable to or choose not to process creation and/or redemption orders, and no other AP is able to step forward to create and redeem, Shares may trade like closed-end funds at a discount to NAV and possibly face trading halts and/or de-listing.

No Guarantee of Active Trading Market. While Shares are listed on NYSE Arca, there can be no assurance that an active trading market for the Shares will be maintained. Further, secondary markets may be subject to irregular trading activity, market dislocations, wide bid/ask spreads and extended trade settlement periods, which could cause a material decline in the Fund's NAV.

Trading Issues. Trading in Shares on NYSE Arca may be halted due to market conditions or for reasons that, in the view of NYSE Arca, make trading in Shares inadvisable. In addition, trading in Shares on NYSE Arca is subject to trading halts caused by extraordinary market volatility pursuant to NYSE Arca's circuit breaker rules. There can be no assurance that the requirements of NYSE Arca necessary to maintain the listing of the Fund will continue to be met or will remain unchanged.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Russia Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Risk of Cash Transactions. Unlike other exchange-traded funds (ETFs), the Fund expects to effect its creations and redemptions partially for cash, rather than in-kind securities. Therefore, it may be required to sell portfolio securities and subsequently recognize gains on such sales that the Fund might not have recognized if it were to distribute portfolio securities in kind. As such, investments in Shares may be less tax-efficient than an investment in a conventional ETF.

ETF Shares Trading and Premium/Discount Risk. The market prices of the Shares may fluctuate in response to the Fund's NAV, the intraday value of the Fund's holdings and supply and demand for Shares. The Adviser cannot predict whether Shares will trade above, below, or at their most recent NAV. Disruptions to creations and redemptions, the existence of market volatility or potential lack of an active trading market for Shares (including through a trading halt), as well as other factors, may result in Shares trading at a significant premium or discount to NAV or to the

intraday value of the Fund's holdings. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses. The securities held by the Fund may be traded in markets that close at a different time than NYSE Arca. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when NYSE Arca is open but after the applicable market closing, fixing or settlement times, bid-ask spreads on NYSE Arca and the resulting premium or discount to the Shares' NAV may widen.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the "1940 Act"). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single issuer. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Russia Index concentrates in a particular sector or sectors or industry or group of industries. To the extent that the Russia Index continues to be concentrated in the energy sector, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that sector will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by comparing the Fund's performance from year to year and by showing how the Fund's average annual returns for the one year, five year and since inception periods compared with the Fund's benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.vaneck.com.

Annual Total Returns (%) Calendar Years

Best Quarter 47.95% 2Q '09

Worst Quarter -52.99% 4Q '08

Average Annual Total Returns for the Periods Ended December 31, 2015

The after-tax returns presented in the table below are calculated using highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown below. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	Past One Year	Past Five Years	Since Inception (4/24/2007)
VanEck Vectors Russia ETF (return before taxes)	0.39%	-14.58%	-8.75%
VanEck Vectors Russia ETF (return after taxes on distributions)	-0.85%	-15.36%	-9.32%
VanEck Vectors Russia ETF (return after taxes on distributions and sale of Fund Shares)	0.53%	-10.21%	-6.05%
MVIS Russia Index (reflects no deduction for fees, expenses or taxes)*	0.81%	-14.97%	-9.12%
S&P 500® Index (reflects no deduction for fees, expenses or taxes)	1.38%	12.57%	6.05%

* Prior to March 19, 2012, the Fund sought to replicate an index called the DAXglobal® Russia+ Index. Therefore index data prior to March 19, 2012, reflects that of the DAXglobal® Russia+ Index. From March 19, 2012 forward, the index data reflects that of the MVIS Russia Index. All index history reflects a blend of the performance of the aforementioned indexes.

PORTFOLIO MANAGEMENT

the Fund**

Hao-Hung (Peter) Liao	Portfolio Manager	April 2007
George Chao	Portfolio Manager	December 2007

PURCHASE AND SALE OF FUND SHARES

For important information about the purchase and sale of Fund Shares, tax information and payments to broker-dealers and other financial intermediaries, please turn to Summary Information About Purchases and Sales of Fund Shares, Taxes and Payments to Broker-Dealers and Other Financial Intermediaries on page 60 of this Prospectus.

VANECK VECTORS RUSSIA SMALL-CAP ETF***SUMMARY INFORMATION****INVESTMENT OBJECTIVE**

VanEck Vectors Russia Small-Cap ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the MVIS™ Russia Small-Cap Index (the Russia Small-Cap Index).

FUND FEES AND EXPENSES

The following tables describe the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None
Annual Fund Operating Expenses
(expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.50%
Other Expenses	0.69%
Total Annual Fund Operating Expenses ^(a)	1.19%
Fee Waivers and Expense Reimbursement ^(a)	-0.42%

Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.77%
--	-------

^(a) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, depositary receipt fees up to 0.08% of the Fund's average daily net assets, offering costs, trading expenses, taxes and extraordinary expenses) from exceeding 0.67% of the Fund's average daily net assets per year until at least May 1, 2017. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same (except that the example incorporates the fee waiver and/or expense reimbursement arrangement for only the first year). Although your actual costs may be higher or lower, based on these

assumptions, your costs would be:

YEAR EXPENSES

1	\$	79
3	\$	336
5	\$	614
10	\$	1,406

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 30% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in securities that comprise the Fund's benchmark index. The Russia Small-Cap Index includes securities of Russian small- and medium-capitalization companies. A company is generally considered to be a Russian company if it is incorporated in Russia or is incorporated outside of Russia but generates at least 50% of its revenues (or, in certain circumstances, has at least 50% of its assets) in Russia. The Fund will normally invest at least 80% of its total assets in securities of small-capitalization Russian companies. The Fund may utilize depositary receipts

* Prior to May 1, 2016, the Fund's name was Market Vectors Russia Small-Cap ETF.

to seek performance that corresponds to the Fund's benchmark index. Investments in depositary receipts of Russian companies whose securities are represented in the Russia Small-Cap Index, and investments in securities of Russian companies for which the Russia Small-Cap Index holds depositary receipts, will count towards the Fund's 80% investment policy. As of December 31, 2015, the Russia Small-Cap Index included 26 securities of companies with a market capitalization range of between approximately \$150 million and \$4.1 billion and a weighted average market capitalization of \$1.3 billion. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Russia Small-Cap Index by investing in a portfolio of securities that generally replicates the Russia Small-Cap Index.

The Fund is classified as a non-diversified fund and, therefore, may invest a greater percentage of its assets in a particular issuer. The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Russia Small-Cap Index concentrates in an industry or group of industries. As of December 31, 2015, each of the industrials, energy, financial services, basic materials and utilities sectors represented a significant portion of the Russia Small-Cap Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund, each of which could significantly and adversely affect the value of an investment in the Fund.

Special Risk Considerations of Investing in Russian Issuers. Investment in securities of Russian issuers involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, expropriation and/or nationalization of assets, restrictions on and government intervention in international trade, confiscatory or punitive taxation, regional conflict, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, the imposition of economic sanctions by other nations, the impact on the economy as a result of civil unrest, and social instability as a result of religious, ethnic and/or socioeconomic unrest.

The securities markets of Russia are underdeveloped and are often considered to be less correlated to global economic cycles than those markets located in more developed countries. As a result, securities markets in Russia are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. Additionally, certain investments in Russia may become less liquid in response to market developments or adverse investor perceptions, or become illiquid after purchase by the Fund, particularly during periods of market turmoil. When the Fund holds illiquid investments, its portfolio may be harder to value, especially in changing markets. Moreover, trading on securities markets in Russia may be suspended altogether.

The government in Russia may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in Russia. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in Russia. Moreover, governmental approval or special

licenses may be required prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of Russia and/or impose additional taxes on foreign investors. Less information may be available about companies in which the Fund invests because many companies that are tied economically to Russia are not subject to accounting, auditing and financial reporting standards or to other regulatory practices required by U.S. companies. These factors, among others, make investing in issuers located or operating in Russia significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of the Fund's Shares.

As a result of recent events involving Ukraine and Russia, the United States and the European Union have imposed sanctions on certain Russian entities and individuals and certain sectors of Russia's economy, which may result in, among other things, the devaluation of Russian currency, a downgrade in the country's credit rating, and/or a decline in the value and liquidating of Russian securities, property or interests. The United States and other nations or international organizations may impose additional economic sanctions or take other actions that may adversely affect Russia-exposed issuers and companies in various sectors of the Russian economy, including, but not limited to, the financial services, energy, metals and mining, engineering, and defense and defense-related materials sectors. These sanctions, any future sanctions or other actions, or even the threat of further sanctions or other actions, may negatively affect the value and liquidity of the Fund's portfolio and may impair the Fund's ability to achieve its investment objective. For example, the Fund may be prohibited from investing in

VANECK VECTORS RUSSIA SMALL-CAP ETF (continued)

securities issued by companies subject to such sanctions. In addition, the sanctions may require the Fund to freeze its existing investments in Russian companies, prohibiting the Fund from buying, selling or otherwise transacting in these investments. Russia has undertaken and may undertake additional countermeasures or retaliatory actions which may further impair the value and liquidity of the Fund's portfolio and potentially disrupt its operations.

For these or other reasons, the Fund could seek to suspend redemptions of Creation Units, including in the event that an emergency exists in which it is not reasonably practicable for the Fund to dispose of its securities or to determine its net asset value (NAV). The Fund could also, among other things, limit or suspend creations of Creation Units. During the period that creations or redemptions are affected, the Fund's shares could trade at a significant premium or discount to their NAV. In the case of a period during which creations are suspended, the Fund could experience substantial redemptions, which may exacerbate the discount to NAV at which the Fund's shares trade, cause the Fund to experience increased transaction costs, and cause the Fund to make greater taxable distributions to shareholders of the Fund. The Fund may also change its investment objective by, for example, seeking to track an alternative index, or the Fund could liquidate all or a portion of its assets, which may be at unfavorable prices.

Despite recent reform and privatization, the Russian government continues to control a large share of economic activity in the region. The Russian government owns shares in corporations in a range of sectors including banking, energy production and distribution, automotive, transportation and telecommunications. Additionally, because Russia produces and exports large volumes of oil and gas, the Russian economy is particularly sensitive to the price of oil and gas on the world market, and a decline in the price of oil and gas could have a significant negative impact on the Russian economy.

The value of the Russian Ruble may be subject to a high degree of fluctuation. The Fund's assets will be invested primarily in equity securities of Russian issuers and the income received by the Fund will be principally in Russian Rubles. The Fund's exposure to the Russian Ruble and changes in value of the Russian Ruble versus the U.S. dollar may result in reduced returns to the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and the Russian Ruble. In addition, current political and economic events in Russia and the effects of the recent global economic crisis on the Russian economy may have significant adverse effects on the Russian Ruble and on the value and liquidity of the Fund's investments.

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because certain securities markets may be limited in size, the activity of large traders may have an undue influence on the prices of securities that trade in such markets. Because the Fund may invest in securities denominated in foreign currencies and some of the income received by the Fund may be in foreign currencies, changes in currency exchange rates may negatively impact the Fund's return. The risks of investing in emerging market countries are greater than risks associated with investments in foreign developed countries.

Risk of Investing in Emerging Market Issuers. Investments in securities of emerging market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a

few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

Risk of Investing in Depositary Receipts. The Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities. Depositary receipts are receipts listed on U.S. or foreign exchanges issued by banks or trust companies that entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market and, if not included in the Russia Small-Cap Index, may negatively affect the Fund's ability to replicate the performance of the Russia Small-Cap Index.

Risk of Investing in the Industrials Sector. To the extent that the industrials sector continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the industrials sector. Companies in the industrials sector may be adversely affected by changes in government regulation, world events and economic conditions. In addition, companies in the industrials sector may be adversely affected by environmental damages, product liability claims and exchange rates.

Risk of Investing in the Energy Sector. To the extent that the energy sector continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the energy sector. Companies operating in the energy sector are subject to risks including, but not limited to,

economic growth, worldwide demand, political instability in the regions that the companies operate, government regulation stipulating rates charged by utilities, interest rate sensitivity, oil price volatility, energy conservation, environmental policies, depletion of resources and the cost of providing the specific utility services. Recently, the price of oil has declined significantly and experienced significant volatility, which has adversely impacted companies operating in the energy sector. In addition, these companies are at risk of civil liability from accidents resulting in injury, loss of life or property, pollution or other environmental damage claims and risk of loss from terrorism and natural disasters.

Risk of Investing in the Financial Services Sector. To the extent that the financial services sector continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the financial services sector. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates, by loan losses, which usually increase in economic downturns, and by credit rating downgrades. In addition, the financial services sector is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, some companies in the financial services sector perceived as benefitting from government intervention in the past may be subject to future government-imposed restrictions on their businesses or face increased government involvement in their operations. Increased government involvement in the financial services sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets may cause companies operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in the Basic Materials Sector. To the extent that the basic materials sector continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the basic materials sector. Companies engaged in the production and distribution of basic materials may be adversely affected by changes in world events, political and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in the Utilities Sector. To the extent that the utilities sector continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a great extent on, the overall condition of the utilities sector. Companies in the utilities sector may be adversely affected by changes in exchange rates, domestic and international competition, difficulty in raising adequate amounts of capital and governmental limitation on rates charged to customers.

Risk of Investing in Small- and Medium-Capitalization Companies. Small- and medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. In addition, these companies often have greater price volatility, lower trading volume and less liquidity than larger more established companies. Returns on investments in securities of small-capitalization and medium-capitalization companies could trail the returns on investments in securities of large-capitalization companies.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred

securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have generally also experienced significantly more volatility in those returns, although under certain market conditions fixed income securities may have comparable or greater price volatility.

Market Risk. The prices of the securities in the Fund are subject to the risk associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Russia Small-Cap Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Russia Small-Cap Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Russia Small-Cap Index and raising cash to meet redemptions or deploying cash with newly created Creation Units (defined herein). The Fund also bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the Russia Small-Cap Index. In addition, the Fund may not be able to invest in certain securities included in the Russia Small-Cap Index, or invest in them in the exact proportions in which they

VANECK VECTORS RUSSIA SMALL-CAP ETF (continued)

are represented in the Russia Small-Cap Index, due to legal restrictions or limitations imposed by the government of Russia, a lack of liquidity on stock exchanges in which such securities trade, potential adverse tax consequences or other regulatory reasons. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the Russia Small-Cap Index is based on securities closing prices on local foreign markets (*i.e.*, the value of the Russia Small-Cap Index is not based on fair value prices), the Fund's ability to track the Russia Small-Cap Index may be adversely affected. In the event economic sanctions are imposed by the United States against certain Russian companies, the Fund may not be able to fully replicate the Russia Small-Cap Index by investing in the relevant securities, which may lead to increased tracking error. The Fund may also need to rely on borrowings to meet redemptions, which may lead to increased expenses. For tax efficiency purposes, the Fund may sell certain securities, and such sale may cause the Fund to realize a loss and deviate from the performance of the Russia Small-Cap Index. In light of the factors discussed above, the Fund's return may deviate significantly from the return of the Russia Small-Cap Index.

Authorized Participant Concentration Risk. The Fund may have a limited number of financial institutions that act as Authorized Participants (APs), none of which are obligated to engage in creation or redemption transactions. To the extent that those APs exit the business, or are unable to or choose not to process creation and/or redemption orders, and no other AP is able to step forward to create and redeem, Shares may trade like closed-end funds at a discount to NAV and possibly face trading halts and/or de-listing.

No Guarantee of Active Trading Market. While Shares are listed on NYSE Arca, there can be no assurance that an active trading market for the Shares will be maintained. Further, secondary markets may be subject to irregular trading activity, market dislocations, wide bid/ask spreads and extended trade settlement periods, which could cause a material decline in the Fund's NAV.

Trading Issues. Trading in Shares on NYSE Arca may be halted due to market conditions or for reasons that, in the view of NYSE Arca, make trading in Shares inadvisable. In addition, trading in Shares on NYSE Arca is subject to trading halts caused by extraordinary market volatility pursuant to NYSE Arca's circuit breaker rules. There can be no assurance that the requirements of NYSE Arca necessary to maintain the listing of the Fund will continue to be met or will remain unchanged.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Russia Small-Cap Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Risk of Cash Transactions. Unlike other exchange-traded funds (ETFs), the Fund expects to effect its creations and redemptions partially for cash, rather than in-kind securities. Therefore, it may be required to sell portfolio securities and subsequently recognize gains on such sales that the Fund might not have recognized if it were to distribute portfolio securities in kind. As such, investments in Shares may be less tax-efficient than an investment in a conventional ETF.

ETF Shares Trading and Premium/Discount Risk. The market prices of the Shares may fluctuate in response to the Fund's NAV, the intraday value of the Fund's holdings and supply and demand for Shares. The Adviser cannot predict whether Shares will trade above, below, or at their most recent NAV. Disruptions to creations and redemptions, the existence of market volatility or potential lack of an active trading market for Shares (including through a trading halt), as well as other factors, may result in Shares trading at a significant premium or discount to NAV or to the intraday value of the Fund's holdings. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses. The securities held by the Fund may be traded in markets that close at a different time than NYSE Arca. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when NYSE Arca is open but after the applicable market closing, fixing or settlement times, bid-ask spreads on NYSE Arca and the resulting premium or discount to the Shares' NAV may widen.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the "1940 Act"). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single issuer. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Russia Small-Cap Index concentrates in a particular sector or sectors or industry or group of

industries. To the extent that the Russia Small-Cap Index is concentrated in any sector or industry, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that sector or industry will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing the Fund's performance from year to year and by showing how the Fund's average annual returns for the one year and since inception periods compared with the Fund's benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.vaneck.com.

Annual Total Returns (%) Calendar Years

Best Quarter: 11.60% 1Q 12

Worst Quarter: -32.97% 4Q 14

Average Annual Total Returns for the Periods Ended December 31, 2015

The after-tax returns presented in the table below are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown below. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	Past One Year	Since Inception (4/13/2011)
VanEck Vectors Russia Small-Cap ETF (return before taxes)	0.48%	-23.48%
VanEck Vectors Russia Small-Cap ETF (return after taxes on distributions)	-0.23%	-23.98%
VanEck Vectors Russia Small-Cap ETF (return after taxes on distributions and sale of Fund Shares)	0.40%	-15.43%
MVIS Russia Small-Cap Index (reflects no deduction for fees, expenses or taxes)	0.42%	-23.50%
S&P 500® Index (reflects no deduction for fees, expenses or taxes)	1.38%	12.18%

PORTFOLIO MANAGEMENT

Investment Adviser. Van Eck Associates Corporation.

Portfolio Managers. The following individuals are jointly and primarily responsible for the day-to-day management of the Fund's portfolio:

Name	Title with Adviser	Date Began Managing the Fund
Hao-Hung (Peter) Liao	Portfolio Manager	April 2011
George Chao	Portfolio Manager	April 2011

PURCHASE AND SALE OF FUND SHARES

VANECK VECTORS VIETNAM ETF*

SUMMARY INFORMATION

INVESTMENT OBJECTIVE

VanEck Vectors Vietnam ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the MVIS™ Vietnam Index (the Vietnam Index).

FUND FEES AND EXPENSES

The following tables describe the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50%
Other Expenses	0.17%
Total Annual Fund Operating Expenses ^(a)	0.67%
Fee Waivers and Expense Reimbursement ^(a)	0.00%
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.67%

^(a) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs, trading expenses, taxes and extraordinary expenses) from exceeding 0.76% of the Fund's average daily net assets per year until at least May 1, 2017. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same (except that the example incorporates the fee waiver and/or expense reimbursement arrangement for only the first year). Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR EXPENSES

1 \$ 68

3	\$	214
5	\$	373
10	\$	835

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 67% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in securities that comprise the Fund's benchmark index. The Vietnam Index includes securities of Vietnamese companies. A company is generally considered to be a Vietnamese company if it is incorporated in Vietnam or is incorporated outside of Vietnam but generates at least 50% of its revenues (or, in certain

* Prior to
May 1,
2016, the
Fund's
name
was
Market
Vectors
Vietnam
ETF.

circumstances, has at least 50% of its assets) in Vietnam. In addition, the Fund may invest in securities of companies that (i) are expected to generate at least 50% of their revenues in Vietnam or (ii) demonstrate a significant and/or dominant position in the Vietnamese market and are expected to grow. Such companies may include micro-, small- and medium-capitalization companies. As of December 31, 2015, the Vietnam Index included 25 securities of companies with a market capitalization range of between approximately \$120 million and \$5.2 billion and a weighted average market capitalization of \$1.4 billion. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Vietnam Index by investing in a portfolio of securities that generally replicates the Vietnam Index. The Fund will normally invest at least 80% of its assets in securities that comprise the Vietnam Index.

The Fund is classified as a non-diversified fund and, therefore, may invest a greater percentage of its assets in a particular issuer. The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Vietnam Index concentrates in an industry or group of industries. As of December 31, 2015, the Vietnam Index was concentrated in the financial services sector, and each of the energy and consumer staples sectors represented a significant portion of the Vietnam Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund, each of which could significantly and adversely affect the value of an investment in the Fund.

Special Risk Considerations of Investing in Vietnamese Issuers. Investment in securities of Vietnamese issuers involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, expropriation and/or nationalization of assets, restrictions on and government intervention in international trade, confiscatory taxation, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, the impact on the economy as a result of civil war, and social instability as a result of religious, ethnic and/or socioeconomic unrest. Vietnam is dependent on trading relationships with certain key trading partners, including the United States, China and Japan, and as a result may be adversely affected if demand for Vietnam's exports in those nations decline.

The securities markets in Vietnam are underdeveloped and are often considered to be less correlated to global economic cycles than those markets located in more developed countries. As a result, securities markets in Vietnam are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. Moreover, trading on securities markets may be suspended altogether.

Current regulations in Vietnam require the Fund to execute trades of securities of Vietnamese companies through a single broker. As a result, the Adviser will have less flexibility to choose among brokers on behalf of the Fund than is typically the case for investment managers. In addition, because the process of purchasing securities in Vietnam

requires that payment to the local broker occur prior to receipt of securities, failure of the broker to deliver the securities will adversely affect the Fund.

The government in Vietnam may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in Vietnam. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in Vietnam. Moreover, Vietnam may require governmental approval or special licenses prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of Vietnam and/or impose additional taxes on foreign investors. These factors, among others, make investing in issuers located or operating in Vietnam significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of the Fund's Shares.

The value of the Vietnam Dong may be subject to a high degree of fluctuation. The Fund's assets will be invested primarily in equity securities of Vietnamese issuers and the income received by the Fund will be principally in Vietnam Dong. The Fund's exposure to the Vietnam Dong and changes in value of the Vietnam Dong versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and the Vietnam Dong.

VANECK VECTORS VIETNAM ETF (continued)

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because certain foreign securities markets may be limited in size, the activity of large traders may have an undue influence on the prices of securities that trade in such markets. Because the Fund may invest in securities denominated in foreign currencies and some of the income received by the Fund may be in foreign currencies, changes in currency exchange rates may negatively impact the Fund's return. The risks of investing in emerging market countries are greater than risks associated with investments in foreign developed countries.

Risk of Investing in Depositary Receipts. The Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities. Depositary receipts are receipts listed on U.S. or foreign exchanges issued by banks or trust companies that entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market and, if not included in the Vietnam Index, may negatively affect the Fund's ability to replicate the performance of the Vietnam Index.

Risk of Investing in Frontier Market Issuers. Vietnam is considered to be a frontier market. Frontier market countries generally have smaller economies and less developed capital markets than traditional emerging markets, and, as a result, the risks of investing in frontier market countries are magnified. Investments in securities of frontier market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

Risk of Investing in Issuers Located Outside of Vietnam. As of December 31, 2015, approximately 18% of the Vietnam Index consisted of issuers located outside of Vietnam that have exposure to the Vietnamese securities market. This number is subject to fluctuations from market conditions and rebalances. Because securities of issuers located outside of Vietnam may not move in tandem with changes in the Vietnamese securities market, the Fund's portfolio may not be as closely linked to the Vietnamese market as a fund that invests solely in issuers that are located in Vietnam or in issuers that actually derive a substantial portion of their revenues from Vietnam.

Risk of Investing in the Financial Services Sector. To the extent that the Fund continues to be concentrated in the financial services sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the financial services sector. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates, by loan losses, which usually increase in economic downturns, and by credit rating downgrades. In addition, the financial services sector is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, some companies in the financial services sector perceived as benefitting from government intervention in the past may be subject to future government-imposed restrictions on their businesses or face increased government involvement in their operations. Increased government involvement in the financial services sector, including measures such as taking

ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets may cause companies operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in the Energy Sector. To the extent that the energy sector continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the energy sector. Companies operating in the energy sector are subject to risks including, but not limited to, economic growth, worldwide demand, political instability in the regions that the companies operate, government regulation stipulating rates charged by utilities, interest rate sensitivity, oil price volatility, energy conservation, environmental policies, depletion of resources and the cost of providing the specific utility services. Recently, the price of oil has declined significantly and experienced significant volatility, which has adversely impacted companies operating in the energy sector. In addition, these companies are at risk of civil liability from accidents resulting in injury, loss of life or property, pollution or other environmental damage claims and risk of loss from terrorism and natural disasters.

Risk of Investing in the Consumer Staples Sector. To the extent that the consumer staples sector continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a greater

extent on, the overall condition of the consumer staples sector. These companies may be adversely affected by changes in the worldwide economy, consumer spending, competition, demographics and consumer preferences, exploration and production spending.

Risk of Investing in Small- and Medium-Capitalization Companies. Small- and medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. In addition, these companies often have greater price volatility, lower trading volume and less liquidity than larger more established companies. Returns on investments in securities of small-capitalization and medium-capitalization companies could trail the returns on investments in securities of large-capitalization companies.

Risk of Investing in Micro-Capitalization Companies. Micro-capitalization companies are subject to substantially greater risks of loss and price fluctuations because their earnings and revenues tend to be less predictable (and some companies may be experiencing significant losses), and their share prices tend to be more volatile and their markets less liquid than companies with larger market capitalizations. The shares of micro-capitalization companies tend to trade less frequently than those of larger, more established companies, which can adversely affect the pricing of these securities and the future ability to sell these securities.

Issuer-Specific Changes Risk. The value of individual securities or particular types of securities in the Fund's portfolio can be more volatile than the market as a whole and can perform differently from the value of the market as a whole, especially if the Fund's portfolio is concentrated in a country, group of countries, region, market, industry, group of industries, sector or asset class. The value of securities of smaller issuers can be more volatile than that of larger issuers.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have generally also experienced significantly more volatility in those returns, although under certain market conditions fixed income securities may have comparable or greater price volatility.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Vietnam Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Vietnam Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Vietnam Index and raising cash to meet redemptions or deploying cash in connection with newly created Creation Units (defined herein). The Fund also bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the Vietnam Index. In addition, the Fund may not be able to invest in certain securities included in the Vietnam Index, or invest in them in the exact proportions in which they are represented in the Vietnam Index, due to legal restrictions or limitations imposed by the government of Vietnam, a lack of liquidity on stock exchanges in which such securities trade, potential adverse consequences or other regulatory reasons. The Fund is expected to value certain of its investments

based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the Vietnam Index is based on securities closing prices on local foreign markets (*i.e.*, the value of the Vietnam Index is not based on fair value prices), the Fund's ability to track the Vietnam Index may be adversely affected. For tax efficiency purposes, the Fund may sell certain securities, and such sale may cause the Fund to realize a loss and deviate from the performance of the Vietnam Index. In light of the factors discussed above, the Fund's return may deviate significantly from the return of the Vietnam Index.

Authorized Participant Concentration Risk. The Fund may have a limited number of financial institutions that act as Authorized Participants (APs), none of which are obligated to engage in creation or redemption transactions. To the extent that those APs exit the business, or are unable to or choose not to process creation and/or redemption orders, and no other AP is able to step forward to create and redeem, Shares may trade like closed-end funds at a discount to NAV and possibly face trading halts and/or de-listing.

No Guarantee of Active Trading Market. While Shares are listed on NYSE Arca, there can be no assurance that an active trading market for the Shares will be maintained. Further, secondary markets may be subject to irregular trading activity,

VANECK VECTORS VIETNAM ETF (continued)

market dislocations, wide bid/ask spreads and extended trade settlement periods, which could cause a material decline in the Fund's NAV.

Trading Issues. Trading in Shares on NYSE Arca may be halted due to market conditions or for reasons that, in the view of NYSE Arca, make trading in Shares inadvisable. In addition, trading in Shares on NYSE Arca is subject to trading halts caused by extraordinary market volatility pursuant to NYSE Arca's circuit breaker rules. There can be no assurance that the requirements of NYSE Arca necessary to maintain the listing of the Fund will continue to be met or will remain unchanged.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Vietnam Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline.

ETF Shares Trading and Premium/Discount Risk. The market prices of the Shares may fluctuate in response to the Fund's NAV, the intraday value of the Fund's holdings and supply and demand for Shares. The Adviser cannot predict whether Shares will trade above, below, or at their most recent NAV. Disruptions to creations and redemptions, the existence of market volatility or potential lack of an active trading market for Shares (including through a trading halt), as well as other factors, may result in Shares trading at a significant premium or discount to NAV or to the intraday value of the Fund's holdings. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses. The securities held by the Fund may be traded in markets that close at a different time than NYSE Arca. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when NYSE Arca is open but after the applicable market closing, fixing or settlement times, bid-ask spreads on NYSE Arca and the resulting premium or discount to the Shares' NAV may widen.

Risk of Cash Transactions. Unlike other exchange-traded funds (ETFs), the Fund expects to effect its creations and redemptions principally for cash, rather than in-kind securities. Therefore, it may be required to sell portfolio securities and subsequently recognize gains on such sales that the Fund might not have recognized if it were to distribute portfolio securities in kind. As such, investments in Shares may be less tax-efficient than an investment in a conventional ETF.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single issuer. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds. The Fund may be particularly vulnerable to this risk because the Vietnam Index is comprised of securities of a very limited number of issuers.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Vietnam Index concentrates in a particular sector or sectors or industry or group of industries. To the extent that the Vietnam Index continues to be concentrated in the financial services sector, the Fund

will be subject to the risk that economic, political or other conditions that have a negative effect on that sector will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by comparing the Fund's performance from year to year and by showing how the Fund's average annual returns for the one year, five year and since inception periods compared with the Fund's benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.vaneck.com.

Annual Total Returns (%) Calendar Years**Best Quarter:** 29.34% 1Q 12**Worst Quarter:** -16.96% 4Q 11**Average Annual Total Returns for the Periods Ended December 31, 2015**

The after-tax returns presented in the table below are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown below. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	Past One Year	Past Five Years	Since Inception (8/11/2009)
VanEck Vectors Vietnam ETF (return before taxes)	-18.87%	-7.94%	-5.88%
VanEck Vectors Vietnam ETF (return after taxes on distributions)	-19.97%	-8.80%	-6.63%
VanEck Vectors Vietnam ETF (return after taxes on distributions and sale of Fund Shares)	-10.63%	-6.06%	-4.50%
VanEck™ Vietnam Index (reflects no deduction for fees, expenses or taxes)	-17.03%	-7.10%	-4.99%
S&P 500® Index (reflects no deduction for fees, expenses or taxes)	1.38%	12.57%	14.32%

PORTFOLIO MANAGEMENT

Investment Adviser. Van Eck Associates Corporation.

Portfolio Managers. The following individuals are jointly and primarily responsible for the day-to-day management of the Fund's portfolio:

Name	Title with Adviser	Date Began Managing the Fund
Hao-Hung (Peter) Liao	Portfolio Manager	August 2009
George Chao	Portfolio Manager	August 2009

PURCHASE AND SALE OF FUND SHARES

For important information about the purchase and sale of Fund Shares, tax information and payments to broker-dealers and other financial intermediaries, please turn to Summary Information About Purchases and Sales of Fund Shares, Taxes and Payments to Broker-Dealers and Other Financial Intermediaries on page 60 of this Prospectus.

SUMMARY INFORMATION ABOUT PURCHASES AND SALES OF FUND SHARES, TAXES AND PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

PURCHASE AND SALE OF FUND SHARES

The Funds issue and redeem Shares at NAV only in a large specified number of Shares each called a Creation Unit, or multiples thereof. A Creation Unit consists of 50,000 Shares.

Individual Shares of a Fund may only be purchased and sold in secondary market transactions through brokers. Shares of the Funds are listed on NYSE Arca, Inc. (NYSE Arca) and because Shares trade at market prices rather than NAV, Shares of the Funds may trade at a price greater than or less than NAV.

TAX INFORMATION

Each Fund's distributions are taxable and will generally be taxed as ordinary income or capital gains.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

The Adviser and its related companies may pay broker-dealers or other financial intermediaries (such as a bank) for the sale of the Fund Shares and related services. These payments may create a conflict of interest by influencing your broker-dealer or other intermediary or its employees or associated persons to recommend the Fund over another investment. Ask your financial adviser or visit your financial intermediary's website for more information.

ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS

PRINCIPAL INVESTMENT STRATEGIES

Each Fund, using a passive or indexing investment approach will attempt to approximate the investment performance of its Index by investing in a portfolio of securities that generally replicates its Index. Under various circumstances or under certain market conditions, it may not be possible or practicable to purchase all of the securities in the Index or in the weighting of such securities in the Index. In these cases, a Fund may purchase a sample of securities in its Index or underweight or overweight a security in a Fund's Index. The Adviser may also purchase securities not in the Fund's Index that the Adviser believes are appropriate to substitute for certain securities in such Index or utilize various combinations of other available investment techniques in seeking to replicate as closely as possible, before fees and expenses, the price and yield performance of the Fund's Index. Each Fund may sell securities that are represented in its Index in anticipation of their removal from such Index or purchase securities not represented in its Index in anticipation of their addition to such Index. Each Fund may also, in order to comply with the tax diversification requirements of the Internal Revenue Code of 1986, as amended (the Internal Revenue Code), temporarily invest in securities not included in its Index that are expected to be highly correlated with the securities included in its Index.

FUNDAMENTAL AND NON-FUNDAMENTAL POLICIES

Each Fund's investment objective and each of its other investment policies are non-fundamental policies that may be changed by the Board of Trustees without shareholder approval, except as noted in this Prospectus or the Statement of Additional Information (SAI) under the section entitled Investment Policies and Restrictions Investment Restrictions.

RISKS OF INVESTING IN THE FUNDS

The following section provides additional information regarding the principal risks identified under Principal Risks of Investing in the Fund in each Fund's Summary Information section followed by additional risk information. The risks listed below are applicable to each Fund unless otherwise noted.

Investors in the Funds should be willing to accept a high degree of volatility in the price of the Funds' Shares and the possibility of significant losses. An investment in the Funds involves a substantial degree of risk. An investment in the Funds is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Funds, each of which could significantly and adversely affect the value of an investment in the Funds.

Special Risk Considerations of Investing in African Issuers. (VanEck Vectors Africa Index ETF only.) Investment in securities of African issuers involves risks not typically associated with investments in securities of issuers in more developed countries or geographic regions that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, expropriation and/or nationalization of assets, restrictions on and government intervention in international trade, confiscatory taxation, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, the impact on the economy as a result of civil war, and social instability as a result of religious, ethnic and/or socioeconomic unrest and, in certain countries, genocidal warfare. Unanticipated political or social developments may result in sudden and significant investment losses. Additionally, Africa is located in a part of the world that has historically been prone to natural disasters, such as droughts, and is economically sensitive to environmental events.

The securities markets in Africa are underdeveloped and are often considered to be less correlated to global economic cycles than those markets located in more developed countries or geographic regions. As a result, securities markets in Africa are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. There may also be a high concentration of trading volume in a small number of issuers representing a limited number of sectors or industries. Moreover, trading on securities markets may be suspended altogether.

Certain economies in African countries depend to a significant degree upon exports of primary commodities such as agricultural products, gold, silver, copper, diamonds and oil. These economies therefore are vulnerable to changes in commodity prices, which in turn may be affected by a variety of factors.

Certain governments in Africa may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in those countries. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in countries in Africa. For example, there may be prohibitions or substantial restrictions on foreign investing in the capital markets of certain countries in Africa or in certain sectors or industries of such countries. Moreover, certain countries in Africa may require governmental approval or special licenses prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of those countries and/or impose additional taxes

ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS
(continued)

on foreign investors. These factors, among others, make investing in issuers located or operating in countries in Africa significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of the Fund's Shares.

There may be a risk of loss due to the imposition of restrictions on repatriation of capital invested. In addition, there may be limitations or delays in the convertibility or repatriation of certain African currencies, which would adversely affect the U.S. dollar value and/or liquidity of the Fund's investments denominated in such African currencies, may impair the Fund's ability to achieve its investment objective and/or may impede the Fund's ability to satisfy redemption requests in a timely manner. When the Fund holds illiquid investments, its portfolio may be harder to value.

The value of certain African currencies may be subject to a high degree of fluctuation and the income received by the Fund will be principally in African currencies. The Fund's exposure to certain African currencies and changes in value of such African currencies versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and the particular African currency.

Special Risk Considerations of Investing in Brazilian Issuers. (VanEck Vectors Brazil Small-Cap ETF only.) The Brazilian government has exercised, and continues to exercise, significant influence over the Brazilian economy. The Brazilian economy has been characterized by frequent, and occasionally drastic, interventions by the Brazilian government, including the imposition of wage and price controls, exchange controls, limiting imports and other measures. The Brazilian government has often changed monetary, taxation, credit, trade and other policies to influence the core of Brazil's economy. Actions taken by the Brazilian government concerning the economy may have significant effects on Brazilian companies and on market conditions and prices of Brazilian securities. Brazil's economy has recently experienced sluggish economic growth due to, among other things, weak consumer spending, political turmoil, high rates of inflation and low commodity prices. The Brazilian government has privatized or has begun the process of privatizing certain entities, notably in the telecommunications and energy sectors. Certain of these newly privatized entities have suffered losses due to, among other things, the inability to adjust to a competitive environment.

The market for Brazilian securities is directly influenced by the flow of international capital, and economic and market conditions of certain countries, especially emerging market countries. As a result, adverse economic conditions or developments in other emerging market countries have at times significantly affected the availability of credit in the Brazilian economy and resulted in considerable outflows of funds and declines in the amount of foreign currency invested in Brazil. In addition, currency devaluations and economic developments in any Central and South American country could have a significant adverse effect on the entire region, including Brazil.

Investments in Brazilian securities may be subject to certain restrictions on foreign investment. Brazilian law provides that whenever a serious imbalance in Brazil's balance of payments exists or is anticipated, the Brazilian government may impose temporary restrictions on the remittance to foreign investors of the proceeds of their investment in Brazil and on the conversion of the Brazilian Real into foreign currency.

Brazil has historically experienced high rates of inflation and a high level of debt, each of which may constrain economic growth. Despite rapid development in recent years, Brazil still suffers from high levels of corruption, crime and income disparity. The Brazilian economy is also heavily dependent upon commodity prices and international trade. Unanticipated political or social developments may result in sudden and significant investment losses. An

increase in prices for commodities, such as petroleum, the depreciation of the Brazilian Real and future governmental measures seeking to maintain the value of the Brazilian Real in relation to the U.S. dollar, may trigger increases in inflation in Brazil and may slow the rate of growth of the Brazilian economy. Conversely, appreciation of the Brazilian Real relative to the U.S. dollar may lead to the deterioration of Brazil's current account and balance of payments as well as limit the growth of exports.

Because the Fund's assets will be invested primarily in equity securities of Brazilian issuers and the income received by the Fund will be principally in Brazilian Real. The Fund's exposure to the Brazilian Real and changes in value of the Brazilian Real versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and Brazilian Real.

Special Risk Considerations of Investing in Egyptian Issuers. (VanEck Vectors Egypt Index ETF only.)

Investment in securities of Egyptian issuers involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, the imposition of capital controls, expropriation and/or nationalization of assets, confiscatory taxation, regional conflict, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, the impact on the economy as a result of civil unrest, and social instability as a result of religious, ethnic and/or socioeconomic unrest. Poor living standards, disparities of wealth and limitations on political freedom have contributed to the unstable environment. Unanticipated or sudden political or social developments may result in sudden and significant investment losses. Issuers in

Egypt are subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are issuers in more developed markets, and therefore, all material information may not be available or reliable. These factors, among others, make investing in issuers located or operating in Egypt significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of the Fund's Shares.

The securities markets in Egypt are underdeveloped and may be less correlated to global economic cycles than those markets located in more developed countries. Securities markets in Egypt are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. These risks could cause the Fund's shares to trade at a significant premium or discount to its NAV. Moreover, trading on securities markets may be suspended altogether, including the possibility that securities markets may be closed for an extended period of time due to political and civil unrest.

The government in Egypt may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in Egypt. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in Egypt. For example, there may be prohibitions or substantial restrictions on foreign investing in Egypt's capital markets or in certain sectors or industries. Moreover, Egypt may require governmental approval or special licenses prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of Egypt and/or impose additional taxes on foreign investors. There may be a risk of loss due to the imposition of restrictions on repatriation of capital invested. Although there has been increasing economic liberalization and limited political liberalization in recent years, there is no guarantee that this trend will continue, particularly if there is a political transition.

In November 2016, the International Monetary Fund approved a \$12 billion loan to help Egypt restore macroeconomic stability and promote inclusive growth. In addition, Egypt introduced a series of economic reforms, including, among others, widening of the tax base, increasing energy subsidies, and allowing the Egyptian pound to float. While these measures are intended to foster Egypt's economic growth and development, there is no guarantee that they will continue or be successful.

Egypt has entered into, and is implementing, a bilateral investment treaty with the United States, which is designed to encourage and protect U.S. investment in Egypt. However, there may be a risk of loss due to expropriation and/or nationalization of assets, confiscation of assets and property or the imposition of restrictions on foreign investments and on repatriation of capital invested, particularly if the bilateral investment treaty with the United States is not fully implemented or fails in its purpose. Other diplomatic developments could adversely affect investments in Egypt, particularly as Egypt is involved in negotiations for various regional conflicts.

The Egyptian economy is heavily dependent on tourism, export of oil and gas, and shipping services revenues from the Suez Canal. Tourism receipts are vulnerable to terrorism, spillovers from conflicts in the region, and potential political instability. Recent political unrest and spate of terrorist attacks has hurt tourism. As Egypt produces and exports oil and gas, any acts of terrorism or armed conflict causing disruptions of oil and gas exports could affect the Egyptian economy and, thus, adversely affect the financial condition, results of operations or prospects of companies in which a may invest. Furthermore, any acts of terrorism or armed conflict in Egypt or regionally could divert demand for the use of the Suez Canal, thereby reducing revenues from the Suez Canal.

Frontier markets can experience high rates of inflation, deflation and currency devaluation. The value of the Egyptian pound may be subject to a high degree of fluctuation. The Fund's assets will be invested primarily in equity securities of Egyptian issuers and the income received by the Fund will be principally in Egyptian pounds. The Fund's exposure to the Egyptian pound and changes in value of the Egyptian pound versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and the Egyptian pound. In addition, there may be limitations or delays in the convertibility or repatriation of the Egyptian pound which would adversely affect the U.S. dollar value and/or liquidity of the Fund's investments denominated in the Egyptian pound, may impair the Fund's ability to achieve its investment objective and/or may impede the Fund's ability to satisfy redemption requests in a timely manner. When the Fund holds illiquid investments, its portfolio may be harder to value.

In Egypt, the marketability of quoted shares is limited due to the restricted opening hours of stock exchanges (normally 10:30 a.m. to 2:30 p.m., Sunday to Thursday), a narrow range of investors and a relatively high proportion of market value being concentrated in the hands of a relatively small number of shareholders. In addition, because Egyptian stock exchanges on which the Fund's portfolio securities may trade are open when the NYSE Arca is closed, the Fund may be subject to heightened risk associated with market movements.

ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS
(continued)

Special Risk Considerations of Investing in Indian Issuers. (VanEck Vectors India Small-Cap Index ETF only.) Investment in securities of Indian issuers involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, greater government control over the economy, political and legal uncertainty, currency fluctuations or blockage of foreign currency exchanges and the risk of nationalization or expropriation of assets. Issuers in India are subject to less stringent requirements regarding accounting, auditing, and financial reporting than are issuers in more developed markets, and therefore, all material information may not be available or reliable. In addition, religious and border disputes persist in India. India has experienced civil unrest and hostilities with neighboring countries, including Pakistan, and the Indian government has confronted separatist movements in several Indian states. India has also experienced acts of terrorism that have targeted foreigners which have had a negative impact on tourism, an important sector of the Indian economy.

The Indian securities markets are smaller than securities markets in more developed economies and are subject to greater price volatility.

Indian stock exchanges have also experienced problems such as temporary exchange closures, broker defaults, settlement delays and strikes by brokers that have affected the market price and liquidity of the securities of Indian companies. In addition, the governing bodies of the Indian stock exchanges have from time to time restricted securities from trading, limited price movements and restricted margin requirements. Further, from time to time, disputes have occurred between listed companies and the Indian stock exchanges and other regulatory bodies that, in some cases, have had a negative effect on market sentiment. Additionally, each of the factors described below could have a negative impact on the Fund's performance and increase the volatility of the Fund.

Economic Risk. The Indian government has exercised and continues to exercise significant influence over many aspects of the economy, and the number of public sector enterprises in India is substantial. Accordingly, Indian government actions in the future could have a significant effect on the Indian economy. The Indian government has experienced chronic structural public sector deficits. High amounts of debt and public spending could have an adverse impact on India's economy. Additionally, the Indian economy may be dependent upon agriculture and thus the Fund's investments may be susceptible to adverse weather changes including the threat of monsoons and other natural disasters.

Regulatory Risk. Under the new SEBI (Foreign Portfolio Investors) Regulations, 2014 (FPI Regulations), a sub-account is deemed to be a foreign portfolio investor (FPI), may continue to buy, sell or deal in securities until the expiry of its current foreign institutional investor (FII) registration, and will be converted to an FPI upon payment of a FPI conversion fee and a renewal registration fee. The Adviser is a qualified foreign institutional investor (FII) with the Securities and Exchange Board of India (SEBI), and the Subsidiary is registered as a sub-account with the SEBI in order to obtain the ability to make and dispose of investments. There can be no assurances that the Indian regulatory authorities will continue to grant such qualifications, and the loss of such qualifications could adversely impact the ability of the Fund to make investments in India.

The Subsidiary's investments will be made in accordance with investment restrictions prescribed under the FPI Regulations. If new policy announcements or regulations in India are made, including potential policies with retroactive effect which require changes in the structure or operations of the Fund, these may adversely impact the performance of the Fund.

Investment and Repatriation Restrictions. The RBI, the Indian counterpart of the Federal Reserve Bank in the United States, imposes certain limits on the foreign ownership of Indian securities. In general, the aggregate ownership by an FII/sub-account/FPI is limited to 24% of the outstanding voting securities of an Indian issuer. This limit can be further extended to the applicable foreign investment limit in a specific sector. The aggregate holding of a single FII/sub-account/FPI, whether directly or through offshore derivative instruments (ODI's) or a combination thereof, must be less than 10% of the total paid-up equity capital of an Indian company. The SEBI, the Indian counterpart of the SEC in the United States, monitors foreign holdings and periodically announces current foreign ownership limitations and changes to such limits. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in India and may inhibit the Fund's ability to track the India Small-Cap Index.

In the case of an ultimate beneficial owner who has direct or indirect common shareholding/beneficial ownership/beneficial interest of more than 50% in an FPI and an ODI subscriber entity or two or more ODI subscribers, the participation through ODIs would be aggregated with the direct holding of FPIs or the other concerned ODI subscriber(s) while determining whether the above investment cap in an Indian company has been triggered.

Tax Risk. The Subsidiary is a wholly-owned subsidiary of the Trust in Mauritius and it is expected that it should normally be entitled to benefits under the Treaty. The tax risks relevant in this regard are:

Indirect Transfer Risk: Where Shares are sold by investors/redeemed by the Fund, gains from such transfer could be subject to tax in India if certain thresholds are met. For more information about this issue, please see [Indian Tax Status](#) below.

Exposure to Permanent Establishment (PE): While the Fund believes that the activities of the Subsidiary or the Adviser should not create a PE of the Subsidiary or the Adviser in India, the Indian tax authorities may claim that these activities have resulted in a PE of the Adviser and/or the Subsidiary in India. Under such circumstances, the profits of the Subsidiary to the extent attributable to the PE would be subject to taxation in India.

Introduction of General Anti-Avoidance Rules (GAAR) in India: GAAR in the Indian Income Tax Act, 1961 (ITA 1961), which is slated to be effective from April 1, 2017, empowers the tax authorities to investigate and declare any arrangement as an impermissible avoidance arrangement . For additional details on GAAR, please refer to [Tax Information](#) under the section titled [Shareholder Information](#).

Renegotiation of the India-Mauritius Double Taxation Treaty (Treaty): There can be no assurance that (i) the terms of the Treaty will continue to be upheld by the Supreme Court of India, will not be amended or subject to a different interpretation in the future or (ii) the Subsidiary will continue to be deemed a tax resident by Mauritius. Any change in the provisions of the Treaty or in its applicability to the Subsidiary could result in the imposition of withholding and other taxes on the Subsidiary by India, which would reduce the return to the Fund on its investments.

Applicability of Minimum Alternate Tax (MAT): As per the ITA 1961, if the tax payable by any company is less than 18.5% of its book profits, it is subject to payment of MAT at 18.5% of its book profits (plus surcharge and cess). In the context of the Subsidiary, long-term capital gains on the sale of listed shares (which are normally exempt from income tax) are included in the definition of book profits for the purposes of MAT calculation.

The Fund intends to elect to pass-through to the Fund's shareholders as a deduction or credit the amount of foreign taxes paid by the Fund. The taxes passed through to shareholders are included in each shareholder's income. Certain shareholders, including some non-U.S. shareholders, are not entitled to the benefit of a deduction or credit with respect to foreign taxes paid by the Fund. Other foreign taxes, such as transfer taxes, may be imposed on the Fund, but would not give rise to a credit, or be eligible to be passed through to shareholders.

Limitations on the Subsidiary's Ability to Make Distributions or Pay Redemption Proceeds to the Fund. Under applicable laws in Mauritius, the Subsidiary can only make distributions if the value of its assets is greater than the sum of the value of its liabilities and its stated capital. In addition, the Subsidiary is subject to limitations under applicable laws in Mauritius on payments of redemption proceeds depending on its accumulated losses for accounting purposes. These limitations may adversely affect the ability of the Subsidiary to make distributions or pay redemption proceeds to the Fund, which may negatively affect the Fund.

Currency Fluctuation and Conversion Risk. Because the Fund's assets will be invested primarily in equity securities of Indian issuers, the income received by the Fund will be principally in Indian rupees. The Fund's exposure to the Indian rupee and changes in the value of the Indian rupee versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and Indian rupees.

Special Risk Considerations of Investing in Indonesian Issuers. (VanEck Vectors Indonesia Index ETF only.) Investment in securities of Indonesian issuers involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in each Fund. Such heightened risks include, among others, expropriation and/or nationalization of assets, restrictions on and government

intervention in international trade, confiscatory taxation, currency devaluations, high rates of inflation, corruption, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, acts of terrorism, the impact on the economy as a result of civil war, and social instability as a result of religious, ethnic and/or socioeconomic unrest. In addition, the Indonesian economy is dependent upon trade with other nations, including China, Japan, Singapore and the United States. Indonesia has experienced acts of terrorism that have targeted foreigners. Such acts of terrorism have had a negative impact on tourism, an important sector of the Indonesia economy.

The securities markets of Indonesia are underdeveloped and are often considered to be less correlated to global economic cycles than those markets located in more developed countries. As a result, securities markets in Indonesia are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. Moreover, trading on securities markets may be suspended altogether.

The government in Indonesia may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in Indonesia. These restrictions and/or controls may at times limit or prevent foreign investment in

ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS
(continued)

securities of issuers located or operating in Indonesia. Moreover, governmental approval or special licenses may be required prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of Indonesia and/or impose additional taxes on foreign investors. Indonesia's securities laws are unsettled and judicial enforcement of contracts with foreign entities is inconsistent and, as a result of pervasive corruption, is subject to the risk that cases will not be judged impartially. These factors, among others, make investing in issuers located or operating in Indonesia significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of each Fund's Shares.

The value of the Indonesian Rupiah may be subject to a high degree of fluctuation. Each Fund's assets will be invested primarily in equity securities of Indonesian issuers and the income received by the Fund will be principally in Indonesian Rupiah. Each Fund's exposure to the Indonesian Rupiah and changes in value of the Indonesian Rupiah versus the U.S. dollar may result in reduced returns for the Fund. Moreover, each Fund may incur costs in connection with conversions between U.S. dollars and the Indonesian Rupiah.

Special Risk Considerations of Investing in Israeli Issuers. (VanEck Vectors Israel ETF only.) Investment in Israeli issuers involves risks that are specific to Israel, including regulatory, legal, political, security and economic risks. Israel's economy is dependent upon external trade with other economies, notably the United States, China, Japan, Canada and European Union countries. Reduction in spending on Israeli products and services or changes in any of these other economies may adversely impact the Fund. The government of Israel may change the way in which Israeli companies are taxed, or may impose taxes on foreign investment. Such actions could have a negative impact on the overall market for Israeli securities and on the Fund. Israel's relations with the Palestinian Authority and its neighboring countries Lebanon, Syria and Iran, among others, have at times been strained due to territorial disputes, historical animosities or security concerns, which may cause uncertainty in the Israeli markets and adversely affect the overall economy.

Israel has experienced a history of hostile relations with several countries in the Mid-East region. Israel and its citizens have also been the target of periodic acts of terrorism that have the potential to disrupt economic activity in the country, and certain terrorist groups are committed to violence against Israel. Current hostilities and the potential for future hostilities may diminish the value of companies whose principal operations or headquarters are located in Israel. Actual hostilities or the threat of future hostilities may cause significant volatility in the share price of companies based in or having significant operations in Israel.

Due to political or civil unrest in Israel, the Israeli securities market may be closed for extended periods of time or trading on the Israeli securities market may be suspended altogether. In addition, the Israeli government may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in Israel. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in Israel and may inhibit the Fund's ability to track the Israel Index.

Special Risk Considerations of Investing in Polish Issuers. (VanEck Vectors Poland ETF only.) Investment in securities of Polish issuers involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, restrictions on and government intervention in international trade, and the impact on the

economy as a result of regional conflict, political instability, armed conflict, and social instability as a result of religious, ethnic and/or socioeconomic unrest. Furthermore, events and evolving conditions in certain European countries have greatly increased market volatility due to concerns about high levels of government debt, credit rating downgrades of sovereign debt and uncertainty about the future use of the euro as a common currency. These events have adversely affected the exchange rate of the euro and may continue to significantly affect every country in Europe. In addition, Poland's economy is dependent upon the export of raw materials and consumer goods. Poland is dependent on trading relationships with certain key trading partners, including Germany and other EU nations and as a result may be affected if demand for Poland's exports in those nations declines.

The securities markets in Poland are underdeveloped and are less correlated to global economic cycles than those markets located in more developed countries. As a result, securities markets in Poland are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. Moreover, trading on securities markets may be suspended altogether.

The government in Poland may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in Poland. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in Poland. Moreover, Poland may require governmental approval or special licenses

prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of Poland and/or impose additional taxes on foreign investors. These factors, among others, make investing in issuers located or operating in Poland significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of the Fund's Shares.

The value of the Polish zloty may be subject to a high degree of fluctuation. The Fund's assets will be invested primarily in equity securities of Polish issuers and the income received by the Fund will be principally in Polish zloty. The Fund's exposure to the Polish zloty and changes in value of the Polish zloty versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and the Polish zloty.

Special Risk Considerations of Investing in Russian Issuers. (VanEck Vectors Russia ETF and VanEck Vectors Russia Small-Cap ETF only.) Investment in securities of Russian issuers involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in each Fund. Such heightened risks include, among others, expropriation and/or nationalization of assets, restrictions on and government intervention in international trade, confiscatory or punitive taxation, regional conflict, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, the imposition of economic sanctions by other nations, the impact on the economy as a result of civil unrest, and social instability as a result of religious, ethnic and/or socioeconomic unrest.

The securities markets of Russia are underdeveloped and are often considered to be less correlated to global economic cycles than those markets located in more developed countries. As a result, securities markets in Russia are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. Additionally, certain investments in Russia may become less liquid in response to market developments or adverse investor perceptions, or become illiquid after purchase by the Fund, particularly during periods of market turmoil. When the Fund holds illiquid investments, its portfolio may be harder to value, especially in changing markets. Moreover, trading on securities markets in Russia may be suspended altogether.

The government in Russia may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in Russia. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in Russia. Moreover, governmental approval or special licenses may be required prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of Russia and/or impose additional taxes on foreign investors. Less information may be available about companies in which the Fund invests because many companies that are tied economically to Russia are not subject to accounting, auditing and financial reporting standards or to other regulatory practices required by U.S. companies. These factors, among others, make investing in issuers located or operating in Russia significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of each Fund's Shares.

As a result of recent events involving Ukraine and Russia, the United States and the European Union have imposed sanctions on certain Russian entities and individuals and certain sectors of Russia's economy, which may result in, among other things, the devaluation of Russian currency, a downgrade in the country's credit rating, and/or a decline in the value and liquidity of Russian securities, property or interests. The United States and other nations or international

organizations may impose additional economic sanctions or take other actions that may adversely affect Russia-exposed issuers and companies in various sectors of the Russian economy, including, but not limited to, the financial services, energy, metals and mining, engineering, and defense and defense-related materials sectors. These sanctions, any future sanctions or other actions, or even the threat of further sanctions or other actions, may negatively affect the value and liquidity of a Fund's portfolio and may impair a Fund's ability to achieve its investment objective. For example, a Fund may be prohibited from investing in securities issued by companies subject to such sanctions. In addition, the sanctions may require a Fund to freeze its existing investments in Russian companies, prohibiting a Fund from buying, selling or otherwise transacting in these investments. Russia has undertaken and may undertake additional countermeasures or retaliatory actions which may further impair the value and liquidity of a Fund's portfolio and potentially disrupt its operations. Such events or any future events may have an adverse impact on the economies and debts of other markets as well.

For these or other reasons, a Fund could seek to suspend redemptions of Creation Units, including in the event that an emergency exists in which it is not reasonably practicable for the Fund to dispose of its securities or to determine its NAV. A Fund could also, among other things, limit or suspend creations of Creation Units. During the period that creations or

ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS
(continued)

redemptions are affected, a Fund's shares could trade at a significant premium or discount to their NAV. In the case of a period during which creations are suspended, a Fund could experience substantial redemptions, which may exacerbate the discount to net asset value at which the Fund's shares trade, cause the Fund to experience increased transaction costs, and cause the Fund to make greater taxable distributions to shareholders of the Fund. A Fund may also change its investment objective by, for example, seeking to track an alternative index, or the Fund could liquidate all or a portion of its assets, which may be at unfavorable prices.

Despite recent reform and privatization, the Russian government continues to control a large share of economic activity in the region. The Russian government owns shares in corporations in a range of sectors including banking, energy production and distribution, automotive, transportation and telecommunications. Additionally, because Russia produces and exports large volumes of oil and gas, the Russian economy is particularly sensitive to the price of oil and gas on the world market, and a decline in the price of oil and gas could have a significant negative impact on the Russian economy.

The value of the Russian Ruble may be subject to a high degree of fluctuation. Each Fund's assets will be invested primarily in equity securities of Russian issuers and the income received by the Fund will be principally in Russian Rubles. Each Fund's exposure to the Russian Ruble and changes in value of the Russian Ruble versus the U.S. dollar may result in reduced returns to the Fund. Moreover, each Fund may incur costs in connection with conversions between U.S. dollars and the Russian Ruble. In addition, current political and economic events in Russia and the effects of the recent global economic crisis on the Russian economy may have significant adverse effects on the Russian Ruble and on the value and liquidity of each Fund's investments.

Special Risk Considerations of Investing in Vietnamese Issuers. (VanEck Vectors Vietnam ETF only.) Investment in securities of Vietnamese issuers involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, expropriation and/or nationalization of assets, restrictions on and government intervention in international trade, confiscatory taxation, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, the impact on the economy as a result of civil war, and social instability as a result of religious, ethnic and/or socioeconomic unrest. Vietnam is dependent on trading relationships with certain key trading partners, including the United States, China and Japan, and as a result may be adversely affected if demand for Vietnam's exports in those nations decline.

The securities markets in Vietnam are underdeveloped and are often considered to be less correlated to global economic cycles than those markets located in more developed countries. As a result, securities markets in Vietnam are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. Moreover, trading on securities markets may be suspended altogether.

Current regulations in Vietnam require the Fund to execute trades of securities of Vietnamese companies through a single broker. As a result, the Adviser will have less flexibility to choose among brokers on behalf of the Fund than is typically the case for investment managers. In addition, because the process of purchasing securities in Vietnam requires that payment to the local broker occur prior to receipt of securities, failure of the broker to deliver the securities will adversely affect the Fund.

The government in Vietnam may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in Vietnam. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in Vietnam. Moreover, Vietnam may require governmental approval or special licenses prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of Vietnam and/or impose additional taxes on foreign investors. These factors, among others, make investing in issuers located or operating in Vietnam significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of the Fund's Shares.

The value of the Vietnam Dong may be subject to a high degree of fluctuation. The Fund's assets will be invested primarily in equity securities of Vietnamese issuers and the income received by the Fund will be principally in Vietnam Dong. The Fund's exposure to the Vietnam Dong and changes in value of the Vietnam Dong versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and the Vietnam Dong.

Risk of Investing in Issuers Located Outside of Vietnam. (VanEck Vectors Vietnam ETF only.) As of December 31, 2015, approximately 18% of the Vietnam Index consisted of issuers located outside of Vietnam that have exposure to the Vietnamese securities market. This number is subject to fluctuations from market conditions and rebalances. Because securities of issuers located outside of Vietnam may not move in tandem with changes in the Vietnamese securities market,

VanEck Vectors Vietnam ETF's portfolio may not be as closely linked to the Vietnamese market as a fund that invests solely in issuers that are located in Vietnam or in issuers that actually derive a substantial portion of their revenues from Vietnam.

Risk of Investing in Foreign Securities. Each Fund may invest in foreign securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because certain foreign securities markets may be limited in size, the activity of large traders may have an undue influence on the prices of securities that trade in such markets. Certain foreign markets that have historically been considered relatively stable may become volatile in response to changed conditions or new developments. Increased interconnectivity of world economies and financial markets increases the possibility that adverse developments and conditions in one country or region will affect the stability of economies and financial markets in other countries or regions. Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. issuers, and therefore, not all material information may be available or reliable. Securities exchanges or foreign governments may adopt rules or regulations that may negatively impact a Fund's ability to invest in foreign securities or may prevent the Fund from repatriating its investments. In addition, a Fund may not receive shareholder communications or be permitted to vote the securities that it holds, as the issuers may be under no legal obligation to distribute shareholder communications. The risks of investing in emerging market countries are greater than risks associated with investments in foreign developed countries.

Certain foreign markets may rely heavily on particular industries or foreign capital and are more vulnerable to diplomatic developments, the imposition of economic sanctions against a particular country or countries, organizations, entities and/or individuals, changes in international trade patterns, trade barriers, and other protectionist or retaliatory measures. Economic sanctions could, among other things, effectively restrict or eliminate a Fund's ability to purchase or sell securities or groups of securities for a substantial period of time, and may make the Fund's investments in such securities harder to value. The imposition of such sanctions could impair the market value of the securities of such foreign issuers or otherwise adversely affect a Fund's operations.

Also, certain issuers located in foreign countries in which a Fund invests may operate in, or have dealings with, countries subject to sanctions and/or embargoes imposed by the U.S. Government and the United Nations and/or countries identified by the U.S. Government as state sponsors of terrorism. As a result, an issuer may sustain damage to its reputation if it is identified as an issuer which operates in, or has dealings with, such countries. A Fund, as an investor in such issuers, will be indirectly subject to those risks.

Because a Fund may invest in securities denominated in foreign currencies and some of the income received by the Fund from these investments may be in foreign currencies, changes in currency exchange rates may negatively impact the Fund's return. The values of the currencies of the countries in which a Fund may invest may be subject to a high degree of fluctuation due to changes in interest rates, the effects of monetary policies issued by the United States, foreign governments, central banks or supranational entities, the imposition of currency controls or other national or global political or economic developments. Therefore, a Fund's exposure to foreign currencies may result in reduced returns to the Fund. Moreover, a Fund may incur costs in connection with conversions between U.S. dollars and foreign currencies. Each Fund may, but is not obligated to, invest in derivative instruments to lock in certain currency exchange rates from time to time.

Risk of Investing in Emerging and Frontier Market Issuers. Certain Funds invest in securities of emerging market issuers and frontier market issuers. Each of VanEck Vectors Africa Index ETF, VanEck Vectors Egypt Index ETF and

VanEck Vectors Vietnam ETF invests its assets in securities of frontier market issuers. Emerging and frontier market countries include countries in Africa, as well as the following countries: Brazil, Egypt, India, Indonesia, Poland, Russia and Vietnam. Frontier market countries generally have smaller economies and less developed capital markets than traditional emerging markets, and, as a result, the risks of investing in frontier market countries are magnified. Investment in securities of emerging and frontier market issuers involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in a Fund. Such heightened risks may include, among others, expropriation and/or nationalization of assets, restrictions on and government intervention in international trade, confiscatory taxation, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, the impact on the economy as a result of civil war, crime (including drug violence) and social instability as a result of religious, ethnic and/or socioeconomic unrest. Issuers in certain emerging and frontier market countries are subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are issuers in more developed markets, and therefore, all material information may not be available or reliable. Additionally, each of the factors described below could have a negative impact on a Fund's performance and increase the volatility of the Fund.

Securities Markets. Securities markets in emerging and frontier market countries are underdeveloped and are often considered to be less correlated to global economic cycles than those markets located in more developed countries.

**ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS
(continued)**

Securities markets in emerging and frontier market countries are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. These factors, coupled with restrictions on foreign investment and other factors, limit the supply of securities available for investment by a Fund. This will affect the rate at which a Fund is able to invest in emerging and frontier market countries, the purchase and sale prices for such securities and the timing of purchases and sales. Emerging and frontier markets can experience high rates of inflation, deflation and currency devaluation. The prices of certain securities listed on securities markets in emerging and frontier market countries have been subject to sharp fluctuations and sudden declines, and no assurance can be given as to the future performance of listed securities in general. Volatility of prices may be greater than in more developed securities markets. Moreover, securities markets in emerging and frontier market countries may be closed for extended periods of time or trading on securities markets may be suspended altogether due to political or civil unrest. Market volatility may also be heightened by the actions of a small number of investors. Brokerage firms in emerging and frontier market countries may be fewer in number and less established than brokerage firms in more developed markets. Since a Fund may need to effect securities transactions through these brokerage firms, the Fund is subject to the risk that these brokerage firms will not be able to fulfill their obligations to the Fund. This risk is magnified to the extent a Fund effects securities transactions through a single brokerage firm or a small number of brokerage firms. In addition, the infrastructure for the safe custody of securities and for purchasing and selling securities, settling trades, collecting dividends, initiating corporate actions, and following corporate activity is not as well developed in emerging and frontier market countries as is the case in certain more developed markets.

Political and Economic Risk. Certain emerging and frontier market countries have historically been subject to political instability and their prospects are tied to the continuation of economic and political liberalization in the region. Instability may result from factors such as government or military intervention in decision making, terrorism, civil unrest, extremism or hostilities between neighboring countries. Any of these factors, including an outbreak of hostilities could negatively impact a Fund's returns. Extremist groups in certain countries in the Middle East and North Africa region have traditionally held anti-Western views and are opposed to openness to foreign investments. Egypt borders the Gaza Strip and Israel and there are risks of further instability and violence in the region. Limited political and democratic freedoms in emerging and frontier market countries might cause significant social unrest. These factors may have a significant adverse effect on an emerging or frontier market country's economy.

Many emerging and frontier market countries may be heavily dependent upon international trade and, consequently, may continue to be negatively affected by trade barriers, exchange controls, managed adjustments in relative currency values and other protectionist measures imposed or negotiated by the countries with which it trades. They also have been, and may continue to be, adversely affected by economic conditions in the countries with which they trade.

In addition, commodities (such as oil, gas and minerals) represent a significant percentage of certain emerging market countries' region's exports and these economies are particularly sensitive to fluctuations in commodity prices. Adverse economic events in one country may have a significant adverse effect on other countries of this region. In addition, most emerging market countries have experienced, at one time or another, severe and persistent levels of inflation, including, in some cases, hyperinflation. This has, in turn, led to high interest rates, extreme measures by governments to keep inflation in check, and a generally debilitating effect on economic growth. Although inflation in many countries has lessened, there is no guarantee it will remain at lower levels. The political history of certain emerging market countries has been characterized by political uncertainty, intervention by the military in civilian and economic

spheres, and political corruption. Such events could reverse favorable trends toward market and economic reform, privatization, and removal of trade barriers, and result in significant disruption in securities markets in the region.

Also, from time to time, certain issuers located in emerging and frontier market countries in which a Fund invests may operate in, or have dealings with, countries subject to sanctions and/or embargoes imposed by the U.S. Government and the United Nations and/or countries identified by the U.S. Government as state sponsors of terrorism. As a result, an issuer may sustain damage to its reputation if it is identified as an issuer which operates in, or has dealings with, such countries. A Fund, as an investor in such issuers, will be indirectly subject to those risks.

The economies of one or more countries in which a Fund may invest may be in various states of transition from a planned economy to a more market oriented economy. The economies of such countries differ from the economies of most developed countries in many respects, including levels of government involvement, states of development, growth rates, control of foreign exchange and allocation of resources. Economic growth in these economies may be uneven both geographically and among various sectors of their economies and may also be accompanied by periods of high inflation. Political changes, social instability and adverse diplomatic developments in these countries could result in the

imposition of additional government restrictions including expropriation of assets, confiscatory taxes or nationalization of some or all of the property held by the underlying issuers of securities included in a Fund's Index. There is no guarantee that the governments of these countries will not revert back to some form of planned or non-market oriented economy, and such governments continue to be active participants in many economic sectors through ownership positions and regulation. The allocation of resources in such countries is subject to a high level of government control. Such countries' governments may strictly regulate the payment of foreign currency denominated obligations and set monetary policy. Through their policies, these governments may provide preferential treatment to particular industries or companies. The policies set by the government of one of these countries could have a substantial effect on that country's economy.

Investment and Repatriation Restrictions. The government in an emerging or frontier market country may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in such emerging and frontier market countries. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in emerging and frontier market countries and may inhibit a Fund's ability to track its Index. In addition, a Fund may not be able to buy or sell securities or receive full value for such securities. Moreover, certain emerging and frontier market countries may require governmental approval or special licenses prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer; may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of such emerging and frontier market countries; and/or may impose additional taxes on foreign investors. A delay in obtaining a required government approval or a license would delay investments in those emerging and frontier market countries, and, as a result, a Fund may not be able to invest in certain securities while approval is pending. The government of certain emerging and frontier market countries may also withdraw or decline to renew a license that enables a Fund to invest in such country. These factors make investing in issuers located or operating in emerging and frontier market countries significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of a Fund's Shares.

Additionally, investments in issuers located in certain emerging and frontier market countries may be subject to a greater degree of risk associated with governmental approval in connection with the repatriation of investment income, capital or the proceeds of sales of securities by foreign investors. Moreover, there is the risk that if the balance of payments in an emerging or frontier market country declines, the government of such country may impose temporary restrictions on foreign capital remittances. Consequently, a Fund could be adversely affected by delays in, or a refusal to grant, required governmental approval for repatriation of capital, as well as by the application to the Fund of any restrictions on investments. Furthermore, investments in emerging and frontier market countries may require a Fund to adopt special procedures, seek local government approvals or take other actions, each of which may involve additional costs to the Fund.

Available Disclosure About Emerging and Frontier Market Issuers. Issuers located or operating in emerging and frontier market countries are not subject to the same rules and regulations as issuers located or operating in more developed countries. Therefore, there may be less financial and other information publicly available with regard to issuers located or operating in emerging and frontier market countries and such issuers are not subject to the uniform accounting, auditing and financial reporting standards applicable to issuers located or operating in more developed countries.

Foreign Currency Considerations. A Fund's assets that are invested in equity securities of issuers in emerging and frontier market countries will generally be denominated in foreign currencies, and the income received by the Fund from these investments will be principally in foreign currencies. The value of an emerging or frontier market country's

currency may be subject to a high degree of fluctuation. This fluctuation may be due to changes in interest rates, the effects of monetary policies issued by the United States, foreign governments, central banks or supranational entities, the imposition of currency controls or other national or global political or economic developments. The economies of certain emerging and frontier market countries can be significantly affected by currency devaluations. Certain emerging and frontier market countries may also have managed currencies which are maintained at artificial levels relative to the U.S. dollar rather than at levels determined by the market. This type of system can lead to sudden and large adjustments in the currency which, in turn, can have a disruptive and negative effect on foreign investors.

A Fund's exposure to an emerging or frontier market country's currency and changes in value of such foreign currencies versus the U.S. dollar may reduce a Fund's investment performance and the value of your investment in the Fund. Meanwhile, a Fund will compute and expects to distribute its income in U.S. dollars, and the computation of income will be made on the date that the income is earned by the Fund at the foreign exchange rate in effect on that

ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS
(continued)

date. Therefore, if the value of the respective emerging or frontier market country's currency falls relative to the U.S. dollar between the earning of the income and the time at which a Fund converts the relevant emerging or frontier market country's currency to U.S. dollars, the Fund may be required to liquidate certain positions in order to make distributions if the Fund has insufficient cash in U.S. dollars to meet distribution requirements under the Internal Revenue Code. The liquidation of investments, if required, could be at disadvantageous prices or otherwise have an adverse impact on a Fund's performance.

Certain emerging and frontier market countries also restrict the free conversion of their currency into foreign currencies, including the U.S. dollar. There is no significant foreign exchange market for many such currencies and it would, as a result, be difficult for a Fund to engage in foreign currency transactions designed to protect the value of the Fund's interests in securities denominated in such currencies. Furthermore, if permitted, a Fund may incur costs in connection with conversions between U.S. dollars and an emerging or frontier market country's currency. Foreign exchange dealers realize a profit based on the difference between the prices at which they are buying and selling various currencies. Thus, a dealer normally will offer to sell a foreign currency to a Fund at one rate, while offering a lesser rate of exchange should the Fund desire immediately to resell that currency to the dealer. A Fund will conduct its foreign currency exchange transactions either on a spot (*i.e.*, cash) basis at the spot rate prevailing in the foreign currency exchange market, or through entering into forward, futures or options contracts to purchase or sell foreign currencies. The VanEck Vectors India Small-Cap Index ETF does not expect to hedge its currency risk.

Operational and Settlement Risk. In addition to having less developed securities markets, emerging and frontier market countries have less developed custody and settlement practices than certain developed countries. Rules adopted under the 1940 Act permit a Fund to maintain its foreign securities and cash in the custody of certain eligible non-U.S. banks and securities depositories. Banks in emerging and frontier market countries that are eligible foreign sub-custodians may be recently organized or otherwise lack extensive operating experience. In addition, in certain emerging and frontier market countries there may be legal restrictions or limitations on the ability of a Fund to recover assets held in custody by a foreign sub-custodian in the event of the bankruptcy of the sub-custodian. Because settlement systems in emerging and frontier market countries may be less organized than in other developed markets, there may be a risk that settlement may be delayed and that cash or securities of the Fund may be in jeopardy because of failures of or defects in the systems. Under the laws in many emerging and frontier market countries, a Fund may be required to release local shares before receiving cash payment or may be required to make cash payment prior to receiving local shares, creating a risk that the Fund may surrender cash or securities without ever receiving securities or cash from the other party. Settlement systems in emerging and frontier market countries also have a higher risk of failed trades and back to back settlements may not be possible.

A Fund may not be able to convert a foreign currency to U.S. dollars in time for the settlement of redemption requests. In the event of a redemption request from an AP, a Fund will be required to deliver U.S. dollars to the AP on the settlement date. In the event that a Fund is not able to convert the foreign currency to U.S. dollars in time for settlement, which may occur as a result of the delays described above, the Fund may be required to liquidate certain investments and/or borrow money in order to fund such redemption. The liquidation of investments, if required, could be at disadvantageous prices or otherwise have an adverse impact on the Fund's performance (*e.g.*, by causing the Fund to overweight foreign currency denominated holdings and underweight other holdings which were sold to fund redemptions). In addition, a Fund will incur interest expense on any borrowings and the borrowings will cause the Fund to be leveraged, which may magnify gains and losses on its investments.

In certain frontier and emerging market countries, the marketability of quoted shares may be limited due to the restricted opening hours of stock exchanges, and a narrow range of investors and a relatively high proportion of market value may be concentrated in the hands of a relatively small number of shareholders. In addition, because certain frontier and emerging market countries' stock exchanges on which a Fund's portfolio securities may trade are open when the NYSE Arca is closed, the Fund may be subject to heightened risk associated with market movements. Trading volume may be lower on certain frontier and emerging market countries' stock exchanges than on more developed securities markets and equities may be generally less liquid. The infrastructure for clearing, settlement and registration on the primary and secondary markets of certain frontier and emerging market countries are less developed than in certain other markets and under certain circumstances this may result in a Fund experiencing delays in settling and/or registering transactions in the markets in which it invests, particularly if the growth of foreign and domestic investment in certain frontier and emerging market countries places an undue burden on such investment infrastructure. Such delays could affect the speed with which a Fund can transmit redemption proceeds and may inhibit the initiation and realization of investment opportunities at optimum times.

Certain issuers in emerging and frontier market countries may utilize share blocking schemes. Share blocking refers to a practice, in certain foreign markets, where voting rights related to an issuer's securities are predicated on these securities being blocked from trading at the custodian or sub-custodian level for a period of time around a shareholder meeting. These restrictions have the effect of barring the purchase and sale of certain voting securities within a specified number of days before and, in certain instances, after a shareholder meeting where a vote of shareholders will be taken. Share blocking may prevent the Fund from buying or selling securities for a period of time. During the time that shares are blocked, trades in such securities will not settle. The blocking period can last up to several weeks. The process for having a blocking restriction lifted can be quite onerous with the particular requirements varying widely by country. In addition, in certain countries, the block cannot be removed. As a result of the ramifications of voting ballots in markets that allow share blocking, the Adviser, on behalf of the Fund, reserves the right to abstain from voting proxies in those markets.

Corporate and Securities Laws. Securities laws in emerging and frontier market countries are relatively new and unsettled and, consequently, there is a risk of rapid and unpredictable change in laws regarding foreign investment, securities regulation, title to securities and shareholder rights. Accordingly, foreign investors may be adversely affected by new or amended laws and regulations. In addition, the systems of corporate governance to which emerging and frontier market issuers are subject may be less advanced than those systems to which issuers located in more developed countries are subject, and therefore, shareholders of issuers located in emerging and frontier market countries may not receive many of the protections available to shareholders of issuers located in more developed countries. In circumstances where adequate laws and shareholder rights exist, it may not be possible to obtain swift and equitable enforcement of the law. In addition, the enforcement of systems of taxation at federal, regional and local levels in emerging and frontier market countries may be inconsistent and subject to sudden change.

Risk of Investing in Depositary Receipts. A Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities. Depositary receipts are receipts listed on U.S. or foreign exchanges issued by banks or trust companies that entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. The issuers of certain depositary receipts are under no obligation to distribute shareholder communications to the holders of such receipts, or to pass through to them any voting rights with respect to the deposited securities. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market and, if not included in a Fund's Index, may negatively affect the Fund's ability to replicate the performance of its Index. In addition, investments in depositary receipts may lead to tracking error.

Risk of Investing in the Basic Materials Sector. (VanEck Vectors Africa Index ETF, VanEck Vectors Egypt Index ETF, VanEck Vectors Russia ETF and VanEck Vectors Russia Small-Cap ETF only.) Because each Fund's respective Index includes securities of issuers in the basic materials sector, a Fund may be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the basic materials sector. Companies engaged in the production and distribution of basic materials may be adversely affected by changes in world events, political and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in the Consumer Discretionary Sector. (VanEck Vectors Brazil Small-Cap ETF, VanEck Vectors India Small-Cap Index ETF and VanEck Vectors Indonesia Index ETF only.) Because each Fund's respective Index includes securities of issuers in the consumer discretionary sector, a Fund may be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the consumer discretionary sector. Companies engaged in the consumer discretionary sector are subject to fluctuations in supply and demand. These companies may also be adversely affected by changes in consumer spending as a result of world events, political and economic conditions, commodity price volatility, changes in exchange rates, imposition of import controls, increased

competition, depletion of resources and labor relations.

Risk of Investing in the Consumer Staples Sector. (VanEck Vectors Africa Index ETF, VanEck Vectors Egypt Index ETF, VanEck Vectors Indonesia Index ETF, VanEck Vectors Russia ETF and VanEck Vectors Vietnam ETF only.) Because each Fund's respective Index includes securities of issuers in the consumer staples sector, a Fund may be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the consumer staples sector. These companies may be adversely affected by changes in the worldwide economy, consumer spending, competition, demographics and consumer preferences, exploration and production spending. Companies in this sector are also affected by changes in government regulation, world events and economic conditions.

Risk of Investing in the Energy Sector. (VanEck Vectors Africa Index ETF, VanEck Vectors Poland ETF, VanEck Vectors Russia ETF, VanEck Vectors Russia Small-Cap ETF and VanEck Vectors Vietnam ETF only.) Because each Fund's respective Index includes securities of issuers in the energy sector, a Fund may be sensitive to changes in, and its performance may

ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS
(continued)

depend to a greater extent on, the overall condition of the energy sector. Companies operating in the energy sector are subject to risks including, but not limited to, economic growth, worldwide demand, political instability in the regions that the companies operate, government regulation stipulating rates charged by utilities, interest rate sensitivity, oil price volatility and the cost of providing the specific utility services. Recently, the price of oil has declined significantly and experienced significant volatility, which has adversely impacted companies operating in the energy sector. In addition, these companies are at risk of civil liability from accidents resulting in injury, loss of life or property, pollution or other environmental damage claims and risk of loss from terrorism and natural disasters.

Risk of Investing in the Financial Services Sector. Because each Fund's respective Index includes securities of issuers in the financial services sector, a Fund may be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the financial services sector. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates, by loan losses, which usually increase in economic downturns, and by credit downgrades. In addition, the financial services sector is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, some companies in the financial services sector perceived as benefitting from government intervention in the past may be subject to future government-imposed restrictions on their businesses or face increased government involvement in their operations. Increased government involvement in the financial services sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets may cause companies operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in the Health Care Sector. (VanEck Vectors Brazil Small-Cap ETF and VanEck Vectors Israel ETF only.) Because the Israel Index includes securities of issuers in the health care sector, the Fund may be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the health care sector. Companies in the health care sector may be affected by extensive government regulation, restrictions on government reimbursement for medical expenses, rising costs of medical products and services, pricing pressure, an increased emphasis on outpatient services, limited number of products, industry innovation, changes in technologies and other market developments. Many health care companies are heavily dependent on patent protection. The expiration of patents may adversely affect the profitability of these companies. Many health care companies are subject to extensive litigation based on product liability and similar claims. Health care companies are subject to competitive forces that may make it difficult to raise prices and, in fact, may result in price discounting. Many new products in the health care sector may be subject to regulatory approvals. The process of obtaining such approvals may be long and costly. Companies in the health care sector may be thinly capitalized and may be susceptible to product obsolescence.

Risk of Investing in the Industrials Sector. (VanEck Vectors Brazil Small-Cap ETF, VanEck Vectors India Small-Cap Index ETF and VanEck Vectors Russia Small-Cap ETF only.) Because each Fund's respective Index includes securities of issuers in the industrials sector, a Fund may be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the industrials sector. Companies in the industrials sector may be adversely affected by changes in government regulation, world events and economic conditions. In addition, companies in the industrials sector may be adversely affected by environmental damages, product liability claims and exchange rates. The stock prices of companies in the industrials sector are affected by supply and demand both for their specific product or service and for industrial sector products in general. The products of manufacturing

companies may face product obsolescence due to rapid technological developments and frequent new product introduction. In addition, the industrials sector may also be adversely affected by changes or trends in commodity prices, which may be influenced or characterized by unpredictable factors.

Risk of Investing in the Information Technology Sector. (VanEck Vectors Israel ETF only.) Because each Fund's respective Index includes securities of issuers in the information technology sector, a Fund may be sensitive to changes in, and their performance may depend to a greater extent on, the overall condition of the information technology sector. Information technology companies face intense competition, both domestically and internationally, which may have an adverse effect on profit margins. Information technology companies may have limited product lines, markets, financial resources or personnel. The products of information technology companies may face product obsolescence due to rapid technological developments and frequent new product introduction, unpredictable changes in growth rates and competition for the services of qualified personnel. Companies in the information technology sector are heavily dependent on patent protection and the expiration of patents may adversely affect the profitability of these companies.

Risk of Investing in the Telecommunications Sector. (VanEck Vectors Africa Index ETF, VanEck Vectors Egypt Index ETF and VanEck Vectors Indonesia Index ETF only.) Because each Fund's respective Index includes securities of issuers in the telecommunications sector, a Fund may be sensitive to changes in, and its performance may depend to a greater extent on,

the overall condition of the telecommunications sector. Companies in the telecommunications sector may be affected by industry competition, substantial capital requirements, government regulations and obsolescence of telecommunications products and services due to technological advancement.

Risk of Investing in the Utilities Sector. (VanEck Vectors Poland ETF and VanEck Vectors Russia Small-Cap ETF only.) Because each Fund's respective Index includes securities of issuers in the utilities sector, a Fund may be sensitive to changes in, and their performance may depend to a greater extent on, the overall condition of the utilities sector. Issuers in the utilities sector are subject to a variety of factors that may adversely affect their business or operations, including high interest costs in connection with capital construction and improvement programs, difficulty in raising capital in adequate amounts on reasonable terms in periods of high inflation and unsettled capital markets, and the effects of economic slowdowns and surplus capacity. Companies in the utilities sector are subject to extensive regulation, including governmental regulation of rates charged to customers, and may face difficulty in obtaining regulatory approval of new technologies. The effects of a U.S. national energy policy and lengthy delays and greatly increased costs and other problems associated with the design, construction, licensing, regulation and operation of nuclear facilities for electric generation, including, among other considerations, the problems associated with the use of radioactive materials and the disposal of radioactive wastes, may adversely affect companies in the utilities sector. Certain companies in the utilities sector may be inexperienced and may suffer potential losses resulting from a developing deregulatory environment. Technological innovations may render existing plants, equipment or products obsolete. Companies in the utilities sector may face increased competition from other providers of utility services. The potential impact of terrorist activities on companies in the utilities sector and its customers and the impact of natural or man-made disasters may adversely affect the utilities sector. Issuers in the utilities sector also may be subject to regulation by various governmental authorities and may be affected by the imposition of special tariffs and changes in tax laws, regulatory policies and accounting standards.

Risk of Investing in Small- and/or Medium-Capitalization Companies. Each Fund may invest in small- and/or medium-capitalization companies and, therefore will be subject to certain risks associated with small- and/or medium-capitalization companies. These companies are often subject to less analyst coverage and may be in early and less predictable periods of their corporate existences, with little or no record of profitability. In addition, these companies often have greater price volatility, lower trading volume and less liquidity than larger more established companies. These companies tend to have smaller revenues, narrower product lines, less management depth and experience, smaller shares of their product or service markets, fewer financial resources and less competitive strength than large-capitalization companies. Returns on investments in securities of small- and/or medium-capitalization companies could trail the returns on investments in securities of larger companies.

Risk of Investing in Micro-Capitalization Companies. (VanEck Vectors Brazil Small-Cap ETF, VanEck Vectors Egypt Index ETF, VanEck Vectors India Small-Cap Index ETF and VanEck Vectors Vietnam ETF only.) A Fund may invest in micro-capitalization companies. These companies are subject to substantially greater risks of loss and price fluctuations because their earnings and revenues tend to be less predictable (and some companies may be experiencing significant losses), and their share prices tend to be more volatile and their markets less liquid than companies with larger market capitalizations. Micro-capitalization companies may be newly formed or in the early stages of development, with limited product lines, markets or financial resources and may lack management depth. In addition, there may be less public information available about these companies. The shares of micro-capitalization companies tend to trade less frequently than those of larger, more established companies, which can adversely affect the pricing of these securities and the future ability to sell these securities. Also, it may take a long time before the Fund realizes a gain, if any, on an investment in a micro-capitalization company.

Issuer-Specific Changes Risk. (VanEck Vectors Vietnam ETF only.) The value of individual securities or particular types of securities in a Fund's portfolio can be more volatile than the market as a whole and can perform differently from the value of the market as a whole, especially if the Fund's portfolio is concentrated in a country, group of countries, region, market, industry, group of industries, sector or asset class. The value of securities of smaller issuers can be more volatile than that of larger issuers. A change in the financial condition, market perception or the credit rating of an issuer of securities included in a Fund's Index may cause the value of its securities to decline.

Equity Securities Risk. The value of the equity securities held by each Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by a Fund participate, or factors relating to specific issuers in which a Fund invests. For example, an adverse event, such as an unfavorable earnings report, may result in a decline in the value of equity securities of an issuer held by a Fund; the price of the equity securities of an issuer may be particularly sensitive to general movements in the securities markets; or a drop in the securities markets may depress the price of most or all of the equities securities held by a Fund. In addition, the equity securities of an issuer in a Fund's portfolio may decline in price if the issuer fails to make anticipated dividend payments. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income,

ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS
(continued)

and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have generally also experienced significantly more volatility in those returns, although under certain market conditions fixed income securities may have comparable or greater price volatility.

A change in the financial condition, market perception or the credit rating of an issuer of securities included in a Fund's Index may cause the value of its securities to decline.

Risk of Investing in Other Funds. Each Fund may invest in shares of other funds, including ETFs. As a result, a Fund will indirectly be exposed to the risks of an investment in the underlying funds. Shares of other funds have many of the same risks as direct investments in common stocks or bonds. In addition, the market value of such funds' shares is expected to rise and fall as the value of the underlying index or securities rise and fall. If the shares of such funds are traded on a secondary market, the market value of such funds' shares may differ from the NAV of the particular fund. As a shareholder in a fund, each Fund will also bear its ratable share of the underlying fund's expenses. At the same time, each Fund will continue to pay its own investment management fees and other expenses. The expenses of such underlying funds will not, however, be counted towards a Fund's expense cap.

Market Risk. The prices of the securities in each Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. Overall securities values could decline generally or underperform other investments. An investment in a Fund may lose money.

Index Tracking Risk. Each Fund's return may not match the return of its Index for a number of reasons. For example, a Fund incurs a number of operating expenses not applicable to its Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of its Index and, to the extent the Fund creates and redeems Creation Units in cash, raising cash to meet redemptions or deploying cash in connection with newly created Creation Units. A Fund also bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of its Index. A Fund may not be fully invested at times, either as a result of cash flows into the Fund (if the Fund effects creations and redemptions for cash) or reserves of cash held by the Fund to pay expenses or meet redemptions. In addition, a Fund may not be able to invest in certain securities included in its Index, or invest in them in the exact proportions in which they are represented in its Index, due to legal restrictions or limitations imposed by the governments of certain countries, a lack of liquidity on stock exchanges in which such securities trade, potential adverse tax consequences or other regulatory reasons (such as diversification requirements). Moreover, a Fund may be delayed in purchasing or selling securities included in its Index. Any issues a Fund encounters with regard to currency convertibility (including the cost of borrowing funds, if any) and repatriation may also increase the index tracking risk. For tax efficiency purposes, a Fund may sell certain securities, and such sale may cause a Fund to realize a loss and deviate from the performance of its Index. In light of the factors discussed above, a Fund's return may deviate significantly from the return of its Index.

VanEck Vectors Africa Index ETF, VanEck Vectors Brazil Small-Cap ETF, VanEck Vectors Egypt Index ETF, VanEck Vectors India Small-Cap Index ETF, VanEck Vectors Russia ETF, VanEck Vectors Russia Small-Cap ETF and VanEck Vectors Vietnam ETF may accept cash in connection with a purchase of Creation Units or effect their redemptions in cash rather than in-kind and, as a result, each Fund's ability to match the return of its respective Index will be affected.

Pursuant to the methodology of the Index Provider (defined herein) used to calculate and maintain the India Small-Cap Index, when a security in the India Small-Cap Index reaches its limitation on foreign ownership, it may not be removed from the India Small-Cap Index that day. The VanEck Vectors India Small-Cap Index ETF, however, may be forced to sell securities at inopportune times or for prices other than at current market values or may elect not to sell such securities on the day that they are removed from the India Small-Cap Index, due to market conditions or otherwise. Due to these factors, the variation between the VanEck Vectors India Small-Cap Index ETF's annual return and the return of the India Small-Cap Index may increase.

In addition, with respect to VanEck Vectors Vietnam ETF, pursuant to the methodology of the Index Provider (defined herein) used to calculate and maintain the Vietnam Index, a company may be removed from the Vietnam Index at a quarterly rebalancing as a result of reaching its limitation on foreign ownership. Consequently, VanEck Vectors Vietnam ETF may be forced to sell securities at inopportune times or for prices other than at current market values or may elect not to sell such securities on the day that they are removed from the Vietnam Index, due to market conditions or otherwise. Due to these factors, the variation between the VanEck Vector Vietnam ETF's annual return and the return of the Vietnam Index may increase.

Each Fund is expected to fair value certain of the foreign securities it holds except those securities primarily traded on exchanges that close at the same time the Fund calculates its NAV. To the extent a Fund calculates its NAV based on fair

value prices and the value of its Index is based on securities' closing prices on local foreign markets (*i.e.*, the value of its Index is not based on fair value prices) or if a Fund otherwise calculates its NAV based on prices that differ from those used in calculating its Index, the Fund's ability to track its Index may be adversely affected. The need to comply with the tax diversification and other requirements of the Internal Revenue Code may also impact a Fund's ability to replicate the performance of its Index. In addition, if a Fund utilizes depositary receipts and other derivative instruments, its return may not correlate as well with its Index as would be the case if the Fund purchased all the securities in its Index directly. Actions taken in response to proposed corporate actions could result in increased tracking error.

With respect to VanEck Vectors Russia ETF and VanEck Vectors Russia Small-Cap ETF only, in the event economic sanctions are imposed by the United States against certain Russian companies, VanEck Vectors Russia ETF and VanEck Vectors Russia Small-Cap ETF may not be able to fully replicate the Russia Index and the Russia Small-Cap Index by investing in the relevant securities, which may lead to increased tracking error. VanEck Vectors Russia ETF and VanEck Vectors Russia Small-Cap ETF may also need to rely on borrowings to meet redemptions, which may lead to increased expenses.

VanEck Vectors Africa Index ETF and VanEck Vectors Egypt Index ETF maintain tax reserves as a provision for Egyptian taxes while the Africa Index and Egypt Index do not. In light of the above factors, including the maintenance of this tax reserve, VanEck Vectors Africa Index ETF's and VanEck Vectors Egypt Index ETF's returns may deviate significantly from the return of the Africa Index and the Egypt Index.

Index tracking risk may be heightened during times of increased market volatility or other unusual market conditions. Errors in the construction or calculation of a Fund's Index may occur from time to time. Any such errors may not be identified or corrected by an Index's Provider for some period of time, which may have an adverse effect on a Fund and its shareholders.

Replication Management Risk. Unlike many investment companies, the Funds are not actively managed. Therefore, unless a specific security is removed from its Index, a Fund generally would not sell a security because the security's issuer is in financial trouble. If a specific security is removed from a Fund's Index, the Fund may be forced to sell such security at an inopportune time or for prices other than at current market values. An investment in a Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. Each Fund's Index may not contain the appropriate or a diversified mix of securities for any particular economic cycle. The timing of changes in the securities of a Fund's portfolio in seeking to replicate its Index could have a negative effect on the Fund. Unlike with an actively managed fund, the Adviser does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, a Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Authorized Participant Concentration Risk. The Fund may have a limited number of financial institutions that act as APs, none of which are obligated to engage in creation or redemption transactions. To the extent that those APs exit the business, or are unable to or choose not to process creation and/or redemption orders, and no other AP is able to step forward to create and redeem, Shares may trade like closed-end funds at a discount to NAV and possibly face trading halts and/or de-listing.

No Guarantee of Active Trading Market. While Shares are listed on NYSE Arca, there can be no assurance that an active trading market for the Shares will be maintained. Further, secondary markets may be subject to irregular trading activity, market dislocations, wide bid/ask spreads and extended trade settlement periods, which could cause a material decline in a Fund's NAV. Van Eck Securities Corporation, the distributor of the Shares (the Distributor), does not maintain a secondary market in the Shares. Investors purchasing and selling shares in the secondary market may not experience investment results consistent with those experienced by those APs creating and redeeming directly with a Fund.

Decisions by market makers or APs to reduce their role or step away from these activities in times of market stress could inhibit the effectiveness of the arbitrage process in maintaining the relationship between the underlying value of the Fund's portfolio securities and the Fund's market price. This reduced effectiveness could result in Fund Shares trading at a discount to its NAV and also in greater than normal intraday bid/ask spreads for Fund Shares.

Trading Issues. Trading in Shares on NYSE Arca may be halted due to market conditions or for reasons that, in the view of NYSE Arca, make trading in Shares inadvisable. In addition, trading in Shares on NYSE Arca is subject to trading halts caused by extraordinary market volatility pursuant to NYSE Arca's circuit breaker rules. If a trading halt or unanticipated early close of NYSE Arca occurs, a shareholder may be unable to purchase or sell Shares of a Fund. There can be no assurance that the requirements of NYSE Arca necessary to maintain the listing of a Fund will continue to be met or will remain unchanged.

ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS
(continued)

ETF Shares Trading and Premium/Discount Risk. Disruptions to creations and redemptions, the existence of market volatility or potential lack of an active trading market for Shares (including through a trading halt), as well as other factors, may result in Shares trading at a significant premium or discount to NAV or to the intraday value of a Fund's holdings. The NAV of the Shares will fluctuate with changes in the market value of the Fund's securities holdings. The market prices of Shares will fluctuate, in some cases materially, in accordance with changes in NAV and the intraday value of a Fund's holdings, as well as supply and demand on the NYSE Arca. The Adviser cannot predict whether Shares will trade below, at or above their NAV. Given the fact that Shares can be created and redeemed by APs in Creation Units, the Adviser believes that large discounts or premiums to the NAV of Shares should not be sustained in the long-term. While the creation/redemption feature is designed to make it likely that Shares normally will trade close to the value of a Fund's holdings, market prices are not expected to correlate exactly to a Fund's NAV due to timing reasons, supply and demand imbalances and other factors. The price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the securities of a Fund's Index trading individually or in the aggregate at any point in time. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses. Any of these factors, discussed above and further below, may lead to the Shares trading at a premium or discount to a Fund's NAV. In addition, because certain of the Fund's underlying securities trade on exchanges that are closed when the NYSE Arca (i.e., the exchange that Shares of the Fund trade on) is open, there are likely to be deviations between the current pricing of an underlying security and the closing security's price (i.e., the last quote from its closed foreign market) resulting in premiums or discounts to NAV that may be greater than those experienced by other ETFs. In addition, the securities held by such Funds may be traded in markets that close at a different time than NYSE Arca. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when NYSE Arca is open but after the applicable market closing, fixing or settlement times, bid/ask spreads and the resulting premium or discount to the Shares' NAV may widen.

When you buy or sell Shares of a Fund through a broker, you will likely incur a brokerage commission or other charges imposed by brokers. In addition, the market price of Shares, like the price of any exchange-traded security, includes a bid/ask spread charged by the market makers or other participants that trade the particular security. The spread of a Fund's Shares varies over time based on the Fund's trading volume and market liquidity and may increase if the Fund's trading volume, the spread of the Fund's underlying securities, or market liquidity decrease. In times of severe market disruption, including when trading of a Fund's holdings may be halted, the bid/ask spread may increase significantly. This means that Shares may trade at a discount to a Fund's NAV, and the discount is likely to be greatest during significant market volatility.

Risk of Cash Transactions. Unlike other ETFs, VanEck Vectors Africa Index ETF, VanEck Vectors Brazil Small-Cap ETF, VanEck Vectors Egypt Index ETF, VanEck Vectors India Small-Cap Index ETF, VanEck Vectors Russia ETF, VanEck Vectors Russia Small-Cap ETF and VanEck Vectors Vietnam ETF effect all of their creations and redemptions at least partially for cash, rather than in-kind securities. As a result, an investment in such Fund may be less tax-efficient than an investment in a more conventional ETF. Other ETFs generally are able to make in-kind redemptions and avoid realizing gains in connection with transactions designed to raise cash to meet redemption requests. Because these Funds currently intend to effect all or a portion of redemptions, as applicable, for cash, rather than in-kind distributions, they may be required to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds, which involves transaction costs. If a Fund recognizes gain on these sales, this generally will cause the Fund to recognize gain it might not otherwise have recognized if it were to distribute portfolio

securities in-kind, or to recognize such gain sooner than would otherwise be required. The Funds generally intend to distribute these gains to shareholders to avoid being taxed on this gain at the Fund level and otherwise comply with the special tax rules that apply to it. This strategy may cause shareholders to be subject to tax on gains they would not otherwise be subject to, or at an earlier date than, if they had made an investment in a different ETF. Additionally, transactions may have to be carried out over several days if the securities market is relatively illiquid and may involve considerable transaction fees and taxes.

Non-Diversified Risk. (All Funds except VanEck Vectors Africa Index ETF, VanEck Vectors Brazil Small-Cap ETF and VanEck Vectors India Small-Cap Index ETF.) Each Fund is a separate investment portfolio of VanEck Vectors ETF Trust (the Trust), which is an open-end investment company registered under the 1940 Act. Each Fund is classified as a non-diversified investment company under the 1940 Act. As a result, each Fund is subject to the risk that it will be more volatile than a diversified fund because the Fund may invest its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single issuer. As a result, the gains and losses on a single investment may have a greater impact on a Fund's NAV and may make the Fund more volatile than more diversified funds. VanEck Vectors Egypt Index ETF and VanEck Vectors Vietnam ETF may be particularly vulnerable to this risk because their respective Indices are comprised of securities of a very limited number of issuers.

Concentration Risk. A Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent that its respective Index concentrates in a particular sector or sectors or industry or group of industries. The securities of many or all of the companies in the same sector or industry may decline in value due to developments adversely affecting such sector or industry. By concentrating its assets in a particular sector or sectors or industry or group of industries, a Fund is subject to the risk that economic, political or other conditions that have a negative effect on that sector or industry will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

ADDITIONAL INVESTMENT STRATEGIES

Each Fund may invest in securities not included in their respective Index, money market instruments, including repurchase agreements or other funds which invest exclusively in money market instruments, convertible securities, structured notes (notes on which the amount of principal repayment and interest payments are based on the movement of one or more specified factors, such as the movement of a particular stock or stock index) and certain derivatives. Convertible securities and depositary receipts not included in a Fund's Index and underlying stocks in respect of depositary receipts included in a Fund's Index may be used by the Fund in seeking performance that corresponds to its respective Index and in managing cash flows, and may count towards compliance with a Fund's 80% policy. Certain Funds may also utilize participation notes to seek performance that corresponds to its respective Index. Each Fund may also invest, to the extent permitted by the 1940 Act, in other affiliated and unaffiliated funds, such as open-end or closed-end management investment companies, including other ETFs. A Fund will not invest in money market instruments as part of a temporary defensive strategy to protect against potential stock market declines.

BORROWING MONEY

Each Fund may borrow money from a bank up to a limit of one-third of the market value of its assets. Each Fund has entered into a credit facility to borrow money for temporary, emergency or other purposes, including the funding of Shareholder redemption requests, trade settlements and as necessary to distribute to Shareholders any income required to maintain such Fund's status as a regulated investment company. To the extent that a Fund borrows money, it will be leveraged; at such times, the Fund will appreciate or depreciate in value more rapidly than its benchmark Index. Leverage generally has the effect of increasing the amount of loss or gain a Fund might realize, and may increase volatility in the value of a Fund's investments.

LENDING PORTFOLIO SECURITIES

Each Fund may lend its portfolio securities to brokers, dealers and other financial institutions desiring to borrow securities to complete transactions and for other purposes. In connection with such loans, a Fund receives liquid collateral equal to at least 102% of the value of the portfolio securities being loaned. This collateral is marked-to-market on a daily basis. Although a Fund will receive collateral in connection with all loans of its securities holdings, the Fund would be exposed to a risk of loss should a borrower fail to return the borrowed securities (*e.g.*, the Fund would have to buy replacement securities and the loaned securities may have appreciated beyond the value of the collateral held by the Fund) or become insolvent. A Fund may pay fees to the party arranging the loan of securities. In addition, a Fund will bear the risk of loss of any cash collateral that it invests.

ADDITIONAL RISKS

Risk of Investing in Derivatives. Derivatives are financial instruments whose values are based on the value of one or more reference assets or indicators, such as a security, currency, interest rate, or index. A Fund's use of derivatives

involves risks different from, and possibly greater than, the risks associated with investing directly in securities and other more traditional investments. Moreover, although the value of a derivative is based on an underlying indicator, a derivative does not carry the same rights as would be the case if a Fund invested directly in the underlying securities, currencies or other assets.

Derivatives are subject to a number of risks, such as potential changes in value in response to market developments, or in the case of over-the-counter derivatives, as a result of a counterparty's credit quality and the risk that a derivative transaction may not have the effect the Adviser anticipated. Derivatives also involve the risk of mispricing or improper valuation and the risk that changes in the value of a derivative may not achieve the desired correlation with the underlying asset or indicator. Derivative transactions can create investment leverage, may be highly volatile, and a Fund could lose more than the amount it invests. The use of derivatives may increase the amount and affect the timing and character of taxes payable by shareholders of a Fund.

Many derivative transactions are entered into over-the-counter (not on an exchange or contract market); as a result, the value of such a derivative transaction will depend on, among other factors, the ability and the willingness of a Fund's counterparty to perform its obligations under the transaction. If a counterparty were to default on its obligations, a Fund's contractual remedies against such counterparty may be subject to bankruptcy and insolvency laws, which could affect the

ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS (continued)

Fund's rights as a creditor (*e.g.*, the Fund may not receive the net amount of payments that it is contractually entitled to receive). A liquid secondary market may not always exist for a Fund's derivative positions at any time.

Participation Notes. Participation Notes (P-Notes) are issued by banks or broker-dealers and are designed to offer a return linked to the performance of a particular underlying equity security or market. P-Notes can have the characteristics or take the form of various instruments, including, but not limited to, certificates or warrants. The holder of a P-Note that is linked to a particular underlying security is entitled to receive any dividends paid in connection with the underlying security. However, the holder of a P-Note generally does not receive voting rights as it would if it directly owned the underlying security.

P-Notes constitute direct, general and unsecured contractual obligations of the banks or broker-dealers that issue them, which therefore subject a Fund to counterparty risk, as discussed below.

Investments in P-Notes involve certain risks in addition to those associated with a direct investment in the underlying foreign companies or foreign securities markets whose return they seek to replicate. For instance, there can be no assurance that the trading price of a P-Note will equal the underlying value of the foreign company or foreign securities market that it seeks to replicate. As the purchaser of a P-Note, a Fund is relying on the creditworthiness of the counterparty issuing the P-Note and has no rights under a P-Note against the issuer of the underlying security. Therefore, if such counterparty were to become insolvent, a Fund would lose its investment. The risk that a Fund may lose its investments due to the insolvency of a single counterparty may be amplified to the extent the Fund purchases P-Notes issued by one issuer or a small number of issuers. P-Notes also include transaction costs in addition to those applicable to a direct investment in securities. In addition, a Fund's use of P-Notes may cause the Fund's performance to deviate from the performance of the portion of its Index to which the Fund is gaining exposure through the use of P-Notes.

Due to liquidity and transfer restrictions, the secondary markets on which P-Notes are traded may be less liquid than the markets for other securities, which may lead to the absence of readily available market quotations for securities in a Fund's portfolio. The ability of a Fund to value its securities becomes more difficult and the judgment in the application of fair value procedures may play a greater role in the valuation of a Fund's securities due to reduced availability of reliable objective pricing data. Consequently, while such determinations will be made in good faith, it may nevertheless be more difficult for a Fund to accurately assign a daily value to such securities.

Leverage Risk. To the extent that a Fund borrows money or utilizes certain derivatives, it may be leveraged. Leveraging generally exaggerates the effect on NAV of any increase or decrease in the market value of a Fund's portfolio securities.

TAX ADVANTAGED PRODUCT STRUCTURE

Unlike many conventional mutual funds which are only bought and sold at closing NAVs, the Shares of each Fund have been designed to be tradable in a secondary market on an intra-day basis and to be created and redeemed in-kind, except for VanEck Vectors Africa Index ETF, VanEck Vectors Brazil Small-Cap ETF, VanEck Vectors Egypt Index ETF, VanEck Vectors India Small-Cap Index ETF, VanEck Vectors Russia ETF, VanEck Vectors Russia Small-Cap

ETF and VanEck Vectors Vietnam ETF whose Shares are created and redeemed partially or principally for cash, in Creation Units at each day's market close. These in-kind arrangements are designed to mitigate the adverse effects on a Fund's portfolio that could arise from frequent cash purchase and redemption transactions that affect the NAV of the Fund. Moreover, in contrast to conventional mutual funds, where frequent redemptions can have an adverse tax impact on taxable shareholders because of the need to sell portfolio securities which, in turn, may generate taxable gain, the in-kind redemption mechanism of certain Funds, to the extent used, generally is not expected to lead to a tax event for shareholders whose shares are not being redeemed.

PORTFOLIO HOLDINGS

A description of each Fund's policies and procedures with respect to the disclosure of the Fund's portfolio securities is available in the Fund's SAI.

MANAGEMENT OF THE FUNDS

Board of Trustees. The Board of Trustees of the Trust has responsibility for the general oversight of the management of the Funds, including general supervision of the Adviser and other service providers, but is not involved in the day-to-day management of the Trust. A list of the Trustees and the Trust officers, and their present positions and principal occupations, is provided in the Funds' SAI.

Investment Adviser. Under the terms of an investment management agreement between the Trust and Van Eck Associates Corporation with respect to the Funds (the Investment Management Agreement), Van Eck Associates Corporation serves as the adviser to each Fund and, subject to the supervision of the Board of Trustees, is responsible for the day-to-day investment management of the Fund. As of December 31, 2015, the Adviser managed approximately \$24.85 billion in assets. The Adviser has been an investment adviser since 1955 and also acts as adviser or sub-adviser to mutual funds, other exchange-traded funds, other pooled investment vehicles and separate accounts. The Adviser's principal business address is 666 Third Avenue, 9th Floor, New York, New York 10017.

A discussion regarding the Board of Trustees' approval of the Investment Management Agreement is available in the Trust's semi-annual report for the period ended June 30, 2015.

For the services provided to each Fund under the Investment Management Agreement, each Fund pays the Adviser monthly fees based on a percentage of each Fund's average daily net assets at the annual rate of 0.50%. From time to time, the Adviser may waive all or a portion of its fee. Until at least May 1, 2017, the Adviser has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of each Fund (excluding acquired fund fees and expenses, interest expense, depositary receipt fees up to 0.10% and 0.08% of the average daily net assets for VanEck Vectors Russia ETF and VanEck Vectors Russia Small-Cap ETF, respectively, offering costs, trading expenses, taxes and extraordinary expenses) from exceeding 0.57% (with respect to VanEck Vectors Indonesia Index ETF), 0.59% (with respect to VanEck Vectors Brazil Small-Cap ETF and VanEck Vectors Israel ETF), 0.60% (with respect to VanEck Vectors Poland ETF), 0.62% (with respect to VanEck Vectors Russia ETF), 0.67% (with respect to VanEck Vectors Russia Small-Cap ETF), 0.76% (with respect to VanEck Vectors Vietnam ETF), 0.78% (with respect to VanEck Vectors Africa Index ETF), 0.85% (with respect to VanEck Vectors India Small-Cap Index ETF), and 0.94% (with respect to VanEck Vectors Egypt Index ETF) of its average daily net assets per year. Offering costs excluded from the expense caps are: (a) legal fees pertaining to a Fund's Shares offered for sale; (b) SEC and state registration fees; and (c) initial fees paid for Shares of a Fund to be listed on an exchange.

Each Fund is responsible for all of its expenses, including the investment advisory fees, costs of transfer agency, custody, legal, audit and other services, interest, taxes, any distribution fees or expenses, offering fees or expenses and extraordinary expenses.

Manager of Managers Structure. With respect to VanEck Vectors Israel ETF, the Adviser and the Trust may rely on an exemptive order (the Order) from the SEC that permits the Adviser to enter into investment sub-advisory agreements with unaffiliated sub-advisers without obtaining shareholder approval. The Adviser, subject to the review and approval of the Board of Trustees, may select sub-advisers for VanEck Vectors Israel ETF and supervise, monitor and evaluate the performance of each sub-adviser.

The Order also permits the Adviser, subject to the approval of the Board of Trustees, to replace sub-advisers and amend investment sub-advisory agreements, including fees, without shareholder approval whenever the Adviser and the Board of Trustees believe such action will benefit VanEck Vectors Israel ETF and its shareholders. The Adviser thus would have the responsibility (subject to the oversight of the Board of Trustees) to recommend the hiring and

replacement of sub-advisers as well as the discretion to terminate any sub-adviser and reallocate VanEck Vectors Israel ETF's assets for management among any other sub-adviser(s) and itself. This means that the Adviser would be able to reduce the sub-advisory fees and retain a larger portion of the management fee, or increase the sub-advisory fees and retain a smaller portion of the management fee. The Adviser would compensate each sub-adviser out of its management fee.

Administrator, Custodian and Transfer Agent. Van Eck Associates Corporation is the administrator for the Funds (the Administrator), and The Bank of New York Mellon is the custodian of the Funds' assets and provides transfer agency and fund accounting services to the Funds. The Administrator is responsible for certain clerical, recordkeeping and/or bookkeeping services which are provided pursuant to the Investment Management Agreement.

Distributor. Van Eck Securities Corporation is the distributor of the Shares. The Distributor will not distribute Shares in less than Creation Units, and does not maintain a secondary market in the Shares. The Shares are traded in the secondary market.

PORTFOLIO MANAGERS

The portfolio managers who currently share joint responsibility for the day-to-day management of each Fund's portfolio are Hao-Hung (Peter) Liao and George Chao. Mr. Liao has been employed by the Adviser since the summer of 2004. Mr. Liao also serves as a portfolio manager for certain other investment companies advised by the Adviser. Mr. Chao has been employed by the Adviser since December 2007. Prior to joining the Adviser, he served as a Controller of Operations Administrations Division and Corporate Safety (September 2006-December 2007) for United Airlines. Messrs. Liao and Chao also serve as portfolio managers for certain other investment companies and pooled investment vehicles managed by the Adviser. See the Funds' SAI for additional information about the portfolio managers' compensation, other accounts managed by the portfolio managers and their respective ownership of Shares of each Fund.

SHAREHOLDER INFORMATION

DETERMINATION OF NAV

The NAV per Share for each Fund is computed by dividing the value of the net assets of the Fund (*i.e.*, the value of its total assets less total liabilities) by the total number of Shares outstanding. Expenses and fees, including the management fee, are accrued daily and taken into account for purposes of determining NAV. The NAV of each Fund is determined each business day as of the close of trading (ordinarily 4:00 p.m. Eastern time) on the New York Stock Exchange (NYSE).

The values of each Fund's portfolio securities are based on the securities' closing prices on the markets on which the securities trade, when available. Due to the time differences between the United States and certain countries in which a Fund invests, securities on these exchanges may not trade at times when Shares of the Fund will trade. In the absence of a last reported sales price, or if no sales were reported, and for other assets for which market quotes are not readily available, values may be based on quotes obtained from a quotation reporting system, established market makers or by an outside independent pricing service. Prices obtained by an outside independent pricing service may use information provided by market makers or estimates of market values obtained from yield data related to investments or securities with similar characteristics and may use a computerized grid matrix of securities and its evaluations in determining what it believes is the fair value of the portfolio securities. Any assets or liabilities denominated in currencies other than the U.S. dollar are converted into U.S. dollars at the current market rates on the date of valuation as quoted by one or more sources. If a market quotation for a security or other asset is not readily available or the Adviser believes it does not otherwise accurately reflect the market value of the security at the time a Fund calculates its NAV, the security or asset will be fair valued by the Adviser in accordance with the Trust's valuation or asset policies and procedures approved by the Board of Trustees. Each Fund may use fair value pricing in a variety of circumstances, including but not limited to, situations when the value of a security in the Fund's portfolio has been materially affected by events occurring after the close of the market on which the security is principally traded (such as a corporate action or other news that may materially affect the price of a security) or trading in a security has been suspended or halted. In addition, each Fund that holds foreign equity securities currently expects that it will fair value certain of such securities held by the Fund each day the Fund calculates its NAV, except those securities principally traded on exchanges that close at the same time a Fund calculates its NAV. Accordingly, a Fund's NAV is expected to reflect certain portfolio securities' fair values rather than their market prices at the time the exchanges on which they principally trade close. Fair value pricing involves subjective judgments and it is possible that a fair value determination for a security or other asset is materially different than the value that could be realized

upon the sale of such security or asset. In addition, fair value pricing could result in a difference between the prices used to calculate a Fund's NAV and the prices used by such Fund's Index. This may adversely affect a Fund's ability to track its Index. With respect to securities that are principally traded on foreign exchanges, the value of a Fund's portfolio securities may change on days when you will not be able to purchase or sell your Shares.

RULE 144A RESTRICTION

An AP (i.e., a person eligible to place orders with the Distributor to create or redeem Creation Units of a Fund) that is not a qualified institutional buyer, as such term is defined under Rule 144A of the Securities Act of 1933, as amended (Securities Act), will not be able to receive, as part of a redemption, restricted securities eligible for resale under Rule 144A.

BUYING AND SELLING EXCHANGE-TRADED SHARES

The Shares of the Funds are listed on NYSE Arca. If you buy or sell Shares in the secondary market, you will incur customary brokerage commissions and charges and may pay some or all of the spread between the bid and the offered price in the secondary market on each leg of a round trip (purchase and sale) transaction. In times of severe market disruption or low trading volume in a Fund's Shares, this spread can increase significantly. It is anticipated that the Shares will trade in the secondary market at prices that may differ to varying degrees from the NAV of the Shares. During periods of

disruptions to creations and redemptions or the existence of extreme market volatility, the market prices of Shares are more likely to differ significantly from the Shares' NAV.

The Depository Trust Company (DTC) serves as securities depository for the Shares. (The Shares may be held only in book-entry form; stock certificates will not be issued.) DTC, or its nominee, is the record or registered owner of all outstanding Shares. Beneficial ownership of Shares will be shown on the records of DTC or its participants (described below). Beneficial owners of Shares are not entitled to have Shares registered in their names, will not receive or be entitled to receive physical delivery of certificates in definitive form and are not considered the registered holder thereof. Accordingly, to exercise any rights of a holder of Shares, each beneficial owner must rely on the procedures of: (i) DTC; (ii) DTC Participants, *i.e.*, securities brokers and dealers, banks, trust companies, clearing corporations and certain other organizations, some of whom (and/or their representatives) own DTC; and (iii) Indirect Participants, *i.e.*, brokers, dealers, banks and trust companies that clear through or maintain a custodial relationship with a DTC Participant, either directly or indirectly, through which such beneficial owner holds its interests. The Trust understands that under existing industry practice, in the event the Trust requests any action of holders of Shares, or a beneficial owner desires to take any action that DTC, as the record owner of all outstanding Shares, is entitled to take, DTC would authorize the DTC Participants to take such action and that the DTC Participants would authorize the Indirect Participants and beneficial owners acting through such DTC Participants to take such action and would otherwise act upon the instructions of beneficial owners owning through them. As described above, the Trust recognizes DTC or its nominee as the owner of all Shares for all purposes. For more information, see the section entitled "Book Entry Only System" in the Funds' SAI.

The NYSE Arca is open for trading Monday through Friday and is closed on weekends and the following holidays; New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day. Because non-U.S. exchanges may be open on days when a Fund does not price its Shares, the value of the securities in the Fund's portfolio may change on days when shareholders will not be able to purchase or sell a Fund's Shares.

The right of redemption may be suspended or the date of payment postponed (1) for any period during which the NYSE Arca is closed (other than customary weekend and holiday closings); (2) for any period during which trading on the NYSE Arca is suspended or restricted; (3) for any period during which an emergency exists as a result of which disposal of the Shares of a Fund or determination of its NAV is not reasonably practicable; or (4) in such other circumstance as is permitted by the SEC.

Market Timing and Related Matters. The Funds impose no restrictions on the frequency of purchases and redemptions. The Board of Trustees considered the nature of each Fund (*i.e.*, a fund whose shares are expected to trade intra-day), that the Adviser monitors the trading activity of APs for patterns of abusive trading, that the Funds reserve the right to reject orders that may be disruptive to the management of or otherwise not in the Funds' best interests, and that each Fund may fair value certain of its securities. Given this structure, the Board of Trustees determined that it is not necessary to impose restrictions on the frequency of purchases and redemptions for the Funds at the present time.

DISTRIBUTIONS

Net Investment Income and Capital Gains. As a shareholder of a Fund, you are entitled to your share of such Fund's distributions of net investment income and net realized capital gains on its investments. Each Fund pays out substantially all of its net earnings to its shareholders as distributions.

Each Fund typically earns income dividends from stocks and interest from debt securities. These amounts, net of expenses, are typically passed along to Fund shareholders as dividends from net investment income. Each Fund realizes capital gains or losses whenever it sells securities. Net capital gains are distributed to shareholders as capital gain distributions.

Net investment income, if any, and net capital gains, if any, are typically distributed to shareholders at least annually. Dividends may be declared and paid more frequently to improve index tracking or to comply with the distribution requirements of the Internal Revenue Code. In addition, in situations where a Fund acquires investment securities after the beginning of a dividend period, a Fund may elect to distribute at least annually amounts representing the full dividend yield net of expenses on the underlying investment securities, as if the Fund owned the underlying investment securities for the entire dividend period. If a Fund so elects, some portion of each distribution may result in a return of capital, which, for tax purposes, is treated as a return of your investment in Shares. Record shareholders will be notified regarding the portion of the distribution which represents a return of capital.

Distributions in cash may be reinvested automatically in additional Shares of a Fund only if the broker through which you purchased Shares makes such option available.

SHAREHOLDER INFORMATION (continued)

TAX INFORMATION

As with any investment, you should consider how your Fund investment will be taxed. The tax information in this Prospectus is provided as general information. You should consult your own tax professional about the tax consequences of an investment in a Fund, including the possible application of foreign, state and local taxes. Unless your investment in a Fund is through a tax-exempt entity or tax-deferred retirement account, such as a 401(k) plan, you need to be aware of the possible tax consequences when: (i) the Fund makes distributions, (ii) you sell Shares in the secondary market or (iii) you create or redeem Creation Units.

Taxes on Distributions. As noted above, each Fund expects to distribute net investment income at least annually, and any net realized long-term or short-term capital gains annually. Each Fund may also pay a special distribution at any time to comply with U.S. federal tax requirements.

In general, your distributions are subject to U.S. federal income tax when they are paid, whether you take them in cash or reinvest them in a Fund. Distributions of net investment income, including any net short-term gains, if any, are generally taxable as ordinary income. Whether distributions of capital gains represent long-term or short-term capital gain is determined by how long a Fund owned the investments that generated them, rather than how long you have owned your Shares. Distributions of net short-term capital gains in excess of net long term capital losses, if any, are generally taxable as ordinary income. Distributions of net long-term capital gains in excess of net short-term capital losses, if any, that are reported as capital gain dividends are generally taxable as long-term capital gains. Long-term capital gains of non-corporate shareholders are taxable at a maximum rate of 15% or 20%, depending on whether the shareholder's income exceeds certain threshold amounts.

The Funds may receive dividends, the distribution of which the Fund may designate as qualified dividends. In the event that a Fund receives such a dividend and designates the distribution of such dividend as a qualified dividend, the dividend may be taxed at the maximum capital gains rates, provided holding period and other requirements are met at both the shareholder and the Fund level.

Distributions in excess of a Fund's current and accumulated earnings and profits are treated as a tax-free return of your investment to the extent of your basis in the Shares, and generally as capital gain thereafter. A return of capital, which for tax purposes is treated as a return of your investment, reduces your basis in Shares, thus reducing any loss or increasing any gain on a subsequent taxable disposition of Shares. A distribution will reduce a Fund's NAV per Share and may be taxable to you as ordinary income or capital gain even though, from an economic standpoint, the distribution may constitute a return of capital.

Dividends, interest and gains from non-U.S. investments of a Fund may give rise to withholding and other taxes imposed by foreign countries. Tax conventions between certain countries and the United States may, in some cases, reduce or eliminate such taxes.

If more than 50% of a Fund's total assets at the end of its taxable year consist of foreign securities, the Fund may elect to pass through to its investors certain foreign income taxes paid by the Fund, with the result that each investor will (i) include in gross income, even though not actually received, the investor's pro rata share of the Fund's foreign income taxes, and (ii) either deduct (in calculating U.S. taxable income) or credit (in calculating U.S. federal income), subject to certain holding period and other limitations, the investor's pro rata share of the Fund's foreign income taxes. It is expected that more than 50% of each Fund's assets will consist of foreign securities.

Backup Withholding. Each Fund may be required to withhold a percentage of your distributions and proceeds if you have not provided a taxpayer identification number or social security number or otherwise established a basis for exemption from backup withholding. The backup withholding rate for individuals is currently 28%. This is not an additional tax and may be refunded, or credited against your U.S. federal income tax liability, provided certain required information is furnished to the Internal Revenue Service.

Taxes on the Sale or Cash Redemption of Exchange Listed Shares. Currently, any capital gain or loss realized upon a sale of Shares is generally treated as long-term capital gain or loss if the Shares have been held for more than one year and as a short term capital gain or loss if held for one year or less. However, any capital loss on a sale of Shares held for six months or less is treated as long-term capital loss to the extent that capital gain dividends were paid with respect to such Shares. The ability to deduct capital losses may be limited. To the extent that a shareholder's Shares are redeemed for cash, this is normally treated as a sale for tax purposes.

Taxes on Creations and Redemptions of Creation Units. A person who exchanges securities for Creation Units generally will recognize a gain or loss. The gain or loss will be equal to the difference between the market value of the Creation Units at the time of exchange and the sum of the exchanger's aggregate basis in the securities surrendered and the amount of any cash paid for such Creation Units. A person who exchanges Creation Units for securities will generally recognize a gain or

loss equal to the difference between the exchanger's basis in the Creation Units and the sum of the aggregate market value of the securities received. The Internal Revenue Service, however, may assert that a loss realized upon an exchange of primarily securities for Creation Units cannot be deducted currently under the rules governing wash sales, or on the basis that there has been no significant change in economic position. Persons exchanging securities for Creation Units or redeeming Creation Units should consult their own tax adviser with respect to whether wash sale rules apply and when a loss might be deductible and the tax treatment of any creation or redemption transaction.

Under current U.S. federal income tax laws, any capital gain or loss realized upon a redemption (or creation) of Creation Units is generally treated as long-term capital gain or loss if the Shares (or securities surrendered) have been held for more than one year and as a short-term capital gain or loss if the Shares (or securities surrendered) have been held for one year or less.

If you create or redeem Creation Units, you will be sent a confirmation statement showing how many Shares you created or sold and at what price.

Medicare Tax. An additional 3.8% Medicare tax is imposed on certain net investment income (including ordinary dividends and capital gain distributions received from a Fund and net gains from redemptions or other taxable dispositions of Fund Shares) of U.S. individuals, estates and trusts to the extent that such person's modified adjusted gross income (in the case of an individual) or adjusted gross income (in the case of an estate or trust) exceeds certain threshold amounts.

Non-U.S. Shareholders. If you are not a citizen or resident alien of the United States, a Fund's ordinary income dividends (which include distributions of net short-term capital gains) will generally be subject to a 30% U.S. withholding tax, unless a lower treaty rate applies or unless such income is effectively connected with a U.S. trade or business.

As part of the Foreign Account Tax Compliance Act, (FATCA), a Fund may be required to withhold a 30% withholding tax on certain types of U.S. sourced income (*e.g.*, dividends, interest, and other types of passive income), and after January 1, 2019, proceeds from the sale or other disposition of property producing U.S. sourced income and certain gain dividends to (i) foreign financial institutions (FFIs), including non-U.S. investment funds, unless they agree to collect and disclose to the Internal Revenue Service (IRS) information regarding their direct and indirect U.S. account holders and (ii) certain nonfinancial foreign entities (NFFEs), unless they certify certain information regarding their direct and indirect U.S. owners. To avoid possible withholding, FFIs will need to enter into agreements with the IRS which state that they will provide the IRS information, including the names, account numbers and balances, addresses and taxpayer identification numbers of U.S. account holders and comply with due diligence procedures with respect to the identification of U.S. accounts as well as agree to withhold tax on certain types of withholdable payments made to non-compliant foreign financial institutions or to applicable foreign account holders who fail to provide the required information to the IRS, or similar account information and required documentation to a local revenue authority, should an applicable intergovernmental agreement be implemented. NFFEs will need to provide certain information regarding each substantial U.S. owner or certifications of no substantial U.S. ownership, unless certain exceptions apply, or agree to provide certain information to the IRS.

While some parts of the FATCA rules have not been finalized, a Fund may be subject to the FATCA withholding obligation, and also will be required to perform due diligence reviews to classify foreign entity investors for FATCA purposes. Investors are required to agree to provide information necessary to allow a Fund to comply with the FATCA rules. If a Fund is required to withhold amounts from payments pursuant to FATCA, investors will receive distributions that are reduced by such withholding amounts.

Non-U.S. shareholders are advised to consult their tax advisors with respect to the particular tax consequences to them of an investment in the Funds, including the possible applicability of the U.S. estate tax.

The foregoing discussion summarizes some of the consequences under current U.S. federal income tax law of an investment in a Fund. It is not a substitute for personal tax advice. Consult your own tax advisor about the potential tax consequences of an investment in a Fund under all applicable tax laws.

Mauritian Tax Status. The Subsidiary is wholly owned by the VanEck Vectors India Small-Cap Index ETF (for purposes of this section, the Fund) and is a tax resident of Mauritius. The Subsidiary is regulated by the Financial Services Commission in Mauritius (FSC) which has issued a Category 1 Global Business License (GBL 1 License) to the Subsidiary to conduct the business of investment holding under the Financial Services Act 2007. The Subsidiary will apply for a tax residence certificate (TRC) to the Mauritius Revenue Authority (the MRA) through the FSC. The MRA will issue a TRC to the Subsidiary if the Subsidiary provides an undertaking to the MRA that it is and will be centrally managed and controlled in Mauritius.

In order to satisfy the MRA that it is centrally managed and controlled in Mauritius, the Subsidiary must:

- (a) have at all times at least two (2) directors of appropriate caliber and able to exercise independence of mind and judgment, who are ordinarily resident in Mauritius;
- (b) maintain, at all times, its principal bank account in Mauritius;

SHAREHOLDER INFORMATION (continued)

- (c) keep and maintain, at all times, its accounting records in Mauritius;
- (d) prepare its statutory financial statements and cause its financial statements to be audited in Mauritius; and
- (e) have at least two (2) directors from Mauritius present in meetings of directors.

In addition to the above, the FSC has devised additional requirements when determining whether a company holding a GBL 1 License is managed and controlled in Mauritius (this by way of amendments brought to section 3 of chapter 4 of the Guide to Global Business (the Guide)). Holders of GBL 1 Licenses are expected to comply with the new economic substance requirement by January 1, 2015, and the FSC shall consider whether a corporation meets at least one of the following criteria:

- (a) the corporation has or shall have office premises in Mauritius; or
- (b) the corporation employs or shall employ on a full time basis at administrative/technical level, at least one person who shall be resident in Mauritius; or
- (c) the corporation's constitution contains a clause whereby all disputes arising out of the constitution shall be resolved by way of arbitration in Mauritius; or
- (d) the corporation holds or is expected to hold within the next twelve months, assets (excluding cash held in bank account or shares/interests in another corporation holding a GBL 1 License) which are worth at least United States Dollars 100,000 in Mauritius; or
- (e) the corporation's shares are listed on a securities exchange licensed by the FSC; or
- (f) the corporation has or is expected to have a yearly expenditure in Mauritius which can be reasonably expected from any similar corporation which is controlled and managed from Mauritius.

The Guide further provides that a corporation shall be deemed to have satisfied the additional economic substance requirements where a related corporation, that is a subsidiary, fellow subsidiary, a parent corporation or any other corporation within the same group structure, holding a GBL 1 License satisfies one of the economic substance criteria.

A TRC currently is issued on an annual basis. Under the current provisions of the Income Tax Act 1995 (ITA 95), a Mauritian company is taxed at the rate of fifteen percent on its chargeable income. A company holding a GBL 1 License is entitled to claim a tax credit on foreign source income at a rate which is the higher of:

- (a) the actual foreign tax paid (including if the Mauritius company holds more than 5% of the issued capital of a company effecting a dividend distribution, a proportionate share of the foreign tax paid by such company) on such income; or
- (b) a deemed foreign tax representing 80% of the Mauritius tax on such income.

Section 2 of ITA 95 defines the term foreign source income as income which is not derived from Mauritius. This includes, in the case of a corporation holding a GBL 1 License, income derived from transactions with non-residents. The ITA 95 has an extensive definition of non-residents. The Fund expects to derive foreign source income only. Therefore, it will pay tax in Mauritius at an effective maximum rate of 3% on its taxable profits.

Under ITA 95, dividends paid to shareholders that do not otherwise derive income from Mauritius are not subject to Mauritius income tax. Moreover, there are no withholding taxes on dividends paid by a Mauritian resident company to its non-resident and resident shareholders. Distributions paid to shareholders following a redemption of shares are not subject to Mauritius income tax provided that the shareholder does not hold its shares in the course of trading activities. There is no Mauritius capital gains tax on the disposal of shares. Profits made from the disposal of securities in the course of trading activities may be liable to income tax at the applicable rate. Under ITA 95, interests paid by a corporation holding a GBL 1 License out of its foreign source income to non-residents that do not carry on any business in Mauritius are not subject to Mauritius income tax.

Indian Tax Status. The taxation of the Subsidiary in India is governed by the provisions of the ITA 1961 read with the provisions of the Treaty. As per Section 90(2) of the ITA 1961, the provisions of the ITA 1961 are subject to applicable tax treaty relief.

In order to claim the beneficial provisions of the Treaty, the Subsidiary must be a tax resident of Mauritius and should obtain a TRC pertaining to the relevant period from the Mauritius Financial Services Commission. Further, in light of Section 90(4) of the ITA 1961 and circular 789 (dated April 13, 2000) issued by the Central Board of Direct Taxes, the Subsidiary should be eligible for the benefits under the Treaty if it is incorporated in Mauritius and has been issued a TRC by the MRA.

Under circular 789, which has been upheld by the Supreme Court of India, the Subsidiary should be eligible for the benefits under the Treaty if it is incorporated in Mauritius and holds a valid TRC issued by the Mauritius income tax authorities.

Additionally, as per the amendments to the ITA 1961 brought in through the Finance Act, 2013 the Subsidiary may have to provide to the tax authorities such other documents and information, as may be prescribed.

Further, as per amendments to the Income Tax Rules, 1962 (underlying rules to the ITA 1961) dated May 1, 2013, persons seeking to avail of treaty benefits (under Section 90 of the ITA 1961) are required to furnish their return of income (irrespective of whether such income is liable to tax in India or not) from assessment years 2013-2014 onwards in the manner prescribed under the ITA 1961. For purposes of filing tax returns, a permanent account number or PAN (i.e., a taxpayer identification number) is required to be obtained.

Exposure to Place of Effective Management (POEM). The Finance Act, 2015 introduced the concept of POEM to determine the tax residency of a company established outside India, and the Central Board of Direct Taxes issued draft guidelines to determine the existence of POEM.

It remains to be seen how the draft guidelines and the Finance Bill, 2016 are finalized/translated into law, whether any material modifications are made in that process and what rules are notified by the Central Government of India for the transition phase.

While the Subsidiary believes that the activities of the Subsidiary or Adviser described in this Prospectus should not lead to a situation where the POEM of the Subsidiary or the Adviser is considered to be in India, there may be a risk that the Indian tax authorities will claim that these activities have resulted in a POEM of the Subsidiary and/or the Adviser in India. If for any reason the activities are held to be a POEM of the Subsidiary and/or the Adviser in India, then the worldwide profits of the Subsidiary would be subject to taxation in India at the corporate tax rate of 30%.

If entitled to relief under the Treaty (as described above), the tax treatment in India of income derived by the Subsidiary (as an FPI) under the ITA 1961 would be as follows:

- i. Transfer of securities: With effect from April 1, 2014, securities held by an FPI pursuant to FPI Regulations are regarded as capital assets and, as a corollary, gains derived from their transfer should be considered as capital gains. As a result of this amendment, gains arising on disposal/transfer of a range of listed securities including shares, debentures and eligible derivative instruments as may have been acquired under applicable laws, shall be taxed as capital gains (and not business income) under Indian domestic law. The taxation of capital gains would be as follows:
 - (a) Under the ITA 1961, capital gains from the sale of zero coupon bonds held for twelve months or less will be taxed as short-term capital gains at the rate of 30% (excluding the applicable surcharge and cess) and those held for more than twelve months shall be taxed at the rate of 10% (excluding the applicable surcharge and cess);
 - (b) Under the ITA 1961, capital gains from the sale of unlisted securities (or from sale of listed securities off the floor of the stock exchange) held for 36 months or less (in case of unlisted securities) or 12 months or less (in case of listed securities) will be taxed at the rate of 30 % (excluding the applicable surcharge and cess) and those held for more than 36/12 months respectively shall be taxed at the rate of 10% (excluding the applicable surcharge and cess) without adjustment for foreign exchange fluctuation;
 - (c) Under the ITA 1961, capital gains from the sale of listed Indian securities on the floor of the stock exchange held for twelve months or less will be taxed at the rate of 15% (excluding the applicable surcharge and cess) and those held for more than twelve months shall be exempt from taxation;
 - (d) The Finance Act, 2012 has exempted from tax the gains arising from the sale of unlisted shares by existing shareholders of a company in an initial public offer (IPO). However, such sale shall be subject to STT.

However, in light of relief available under the Treaty, capital gains outlined in (a) to (c) above should not be subject to tax in India, provided the Fund has no PE in India. If the Fund has a PE in India, it can opt to be taxed under the domestic law provisions, in which case its gains from transfer of securities should be taxable as capital gains. Alternatively, it can also opt to be taxed under the Treaty, in which case income from such transfer (net of expenses) is taxable at 40% (plus applicable surcharge and cess) to the extent attributable to the permanent establishment.

- ii. The Subsidiary will seek to (i) comply with the requirements of the Treaty, (ii) qualify as a tax resident of Mauritius, (iii) maintain its central management and control in Mauritius and (iv) obtain a valid TRC from time to time. On that basis, the Fund's management believes that the Subsidiary should be able to obtain the benefits of the Treaty benefitting the Fund ultimately. However, there can be no assurance that the Subsidiary will be granted a TRC in the future, or that the Indian government will grant benefits under the Treaty based on the issuance of TRC. In addition, while the validity of the Treaty and its applicability to entities such as the Subsidiary was upheld by the Supreme Court of India, no assurance can be given that the terms of the Treaty will not be subject to re-interpretation or re-negotiation in the future. Any change in the Treaty's application could have a material adverse effect on the returns of the Fund. Further, it is possible that the Indian tax authorities may take the position that the Subsidiary is not entitled to the benefits of the Treaty notwithstanding the receipt of a TRC.
- iii. Dividends: Dividends paid by the Indian companies are exempt from tax in the hands of the Subsidiary, subject to payment of dividend distribution tax by the Indian company upon distribution of dividends at an effective rate of 20.36% on such dividends.

SHAREHOLDER INFORMATION (continued)

- iv. Any interest income from loans made or debt securities held in India are taxable at the rate of (1) 10% under the Treaty provided the Subsidiary qualifies as the beneficial owner of the interest income; or (2) 20% (plus applicable surcharge and education cess) under the ITA 1961 except in case of interest income with respect to investment in rupee-denominated debts of an Indian company or Government Security (as defined in Section 2(b) of Securities Contracts (Regulation) Act, 1956), which is taxable at the rate of 5% (plus applicable surcharge and education cess) if payable to FPIs on or after June 1, 2013 and before July 1, 2017 and if the rate of interest does not exceed such rate as may be notified by the Government of India.

Securities Transaction Tax

All transactions entered on a recognized stock exchange in India are subject to a securities transaction tax (STT). STT was introduced under Section 98 of the Finance (No.2) Act, 2004 on transactions relating to sale, purchases and redemption of investments made by purchasers or sellers of Indian securities and equity oriented mutual fund units. The current STT as levied on the transaction value as follows:

- 0.1% payable by the buyer and 0.1% by the seller on the value of transactions of delivery based transfer of an equity share in an Indian company entered in a recognized stock exchange;
 - 0.001% on the value of transactions of delivery based sale of a unit of an equity oriented mutual fund entered in a recognized stock exchange, payable by the seller;
 - 0.025 % on the value of transactions of non-delivery based sale of an equity share in an Indian company or a unit of an equity oriented mutual fund, entered in a recognized stock exchange payable by the seller;
 - 0.017% on the value of transactions of derivatives being options, entered in a recognized stock exchange. STT is to be paid by the seller;
 - 0.01% on the value of transactions of sale of derivatives being futures, entered in a recognized stock exchange. STT is to be paid by the seller;
 - 0.001 % on the value of transactions of sale of units of an equity-oriented fund to the mutual fund, payable by the seller in accordance with the Finance Act, 2013;
 - 0.125% on the value of transactions of sale of derivatives being options, where the option is exercised, entered in a recognized stock exchange. STT is to be paid by buyer;
- The Finance Act, 2012 has exempted from tax the capital gains (under the ITA 1961) arising from the sale of unlisted shares by existing shareholders of a Sub-Fund in an initial public offer. However, such sale is subject to STT at 0.2% of the sale consideration payable by the seller.

Minimum Alternate Tax (MAT)

In the event the Subsidiary is not eligible to benefits of the Treaty, then the Subsidiary may be subject to Indian MAT. As per the ITA 1961, if the Indian income tax payable by any company is less than 18.5% of its book profits, then the Indian tax payable by the company is the MAT rate of 18.5% of book profits (excluding surcharge and cess). It may be noted that long-term capital gains on the sale of listed securities which are normally exempt from income tax under the ITA 1961 are included in the definition of book profits for the purposes of calculating MAT. Courts have traditionally held that MAT is not applicable to companies incorporated and resident outside India (since they do not maintain their books under the Indian Companies Act). However, there have been certain decisions by the Authority for Advance Rulings holding that MAT is applicable to foreign companies. The Finance Act, 2015 provides that with effect from April 1, 2015, if capital gains or interest arising to an FPI on transactions in securities has been credited by the FPI to its profit and loss account, then such amount is to be excluded from the computation of book profits .

Introduction of GAAR

The Finance Act, 2012 had introduced GAAR, which is slated to be effective from April 1, 2017.

As per the provisions introduced in the ITA 1961 by the Finance Act, 2012 on GAAR, upon declaration of an arrangement as an impermissible avoidance arrangement, the tax authorities can disregard entities in a structure, reallocate income and expenditure between parties to the arrangement, alter the tax residence of such entities and the legal situs of assets involved, treat debt as equity and vice versa. The tax authorities also have the power to deny benefits under an applicable double-taxation avoidance treaty.

The term impermissible avoidance arrangement has been defined broadly to mean an arrangement entered into with the main purpose of obtaining a tax benefit and satisfying one or more of the following: (a) non-arm's length dealings; (b) misuse or abuse of the provisions of the domestic income tax provisions; (c) lack of commercial substance; and (d) arrangement similar to that employed for non-bona fide purposes. Factors such as the holding period of the investment, availability of an

exit route and whether taxes have been paid in connection with the arrangement may be relevant but not sufficient for determining commercial substance. An arrangement shall also be deemed to be lacking commercial substance, if it does not have a significant effect upon the business risks, or net cash flows of any party to the arrangement apart from any effect attributable to the tax benefit that would be obtained.

According to a notification issued by the Central Board of Direct Taxes dated September 23, 2013 (Notification), only those arrangements which result in a tax benefit of Indian Rupees 30 million (approximately \$500,000) or more will attract the provisions of GAAR. Further, the provisions of Chapter X-A of the Tax Act (relating to GAAR) are not applicable in respect of any income accruing or arising to, or deemed to accrue or arise to, or received or deemed to be received by any person from transfer of investments made before August 30, 2010 by such person.

The above notification does not provide clarity on the applicability of GAAR from transfer of investments made on or after August 30, 2010 but before the effective date from which GAAR is applicable. However, the Finance Minister stated (at the time the Finance Act, 2015 was laid before Parliament) that investments made up to March 31, 2017 will be protected from the applicability of GAAR through an amendment of the relevant rules in this regard. These rules have not yet been issued.

Taxation of Indirect Transfer of Indian Assets

The Finance Act, 2012 had introduced a provision for the levy of capital gains tax on income arising from the transfer of shares/interest in a company/entity organized outside India which derives, directly or indirectly, its value substantially from the assets located in India.

The Finance Act, 2015 has introduced the criteria to determine when the share or interest of a foreign company or entity shall be deemed to derive its value substantially from the assets (whether tangible or intangible) located in India. The Finance Act, 2015 states that if on the specified date , the value of such Indian assets (i) exceeds INR 10 crores (approximately \$166,667); and (ii) represents at least 50% of the value of all the assets owned by the company or entity in which shares/interest is being transferred. The value of assets is proposed to be the fair value of such asset, without reduction of liabilities, if any, in respect of the asset. The manner of determination of the fair value of the assets has not been prescribed and is to be provided for by amending the Income Tax Rules, 1962.

The end of the accounting period preceding the date of transfer is proposed to be the specified date for the purposes of valuation. However, in a situation when the book value of the assets on the date of transfer exceeds the book value of the assets as of the end of the accounting period preceding the date of transfer by at least 15%, it is proposed that the specified date shall be the date of transfer.

The gains arising on transfer of a share or interest deriving, directly or indirectly, its value substantially from assets located in India is proposed to be taxed in India only to the extent income arising from such transfer can be reasonably attributable to assets located in India. This would be relevant where the entity in which shares or interest is transferred also has assets outside India. While the Finance Act, 2015 does not provide for the mechanism determination of income attributable to assets in India, it is proposed to be prescribed subsequently by amending the Income Tax Rules, 1962. These rules have not yet been issued.

Further, the situations when indirect transfer of Indian assets is proposed to be exempted from taxation have also been provided in the Finance Act, 2015:

Where the transferor of shares or interest in a foreign entity, along with its related parties does not hold (i) the right of control or management; and (ii) the voting power or share capital or interest exceeding 5% of the total voting power or total share capital in such foreign company or entity directly holding the Indian assets.

In case the transfer is of shares or interest in a foreign company/entity which does not hold the Indian assets directly, then the exemption shall be available to the transferor if it along with related parties does not hold (i) the right of management or control in relation to such foreign company/entity (whose shares/interests are being transferred); and (ii) (A) any rights in or in relation to such foreign company/entity (whose shares/interests are being transferred) which would entitle it to the right of control or management of the (underlying) company/entity which directly holds Indian assets; or (B) any percentage of voting power or share capital or interest in such foreign company/entity (whose shares/interests are being transferred) which results in holding (either individually or along with associated enterprises) a voting power or share capital or interest exceeding 5% of the total voting power or total share capital or total interest of the (underlying) company/entity which directly holds Indian assets.

In case of business reorganization in the form of demergers and amalgamation, exemptions have been provided. The conditions for availing these exemptions are similar to the exemptions that are provided under the ITA to transactions of a similar nature.

SHAREHOLDER INFORMATION (continued)

The above indirect transfer tax-related provisions could impact the redemption and/or the transfer of the Shareholders interests in the Fund. Such taxation should be subject to relief under an applicable tax treaty. However, it would be important to note that the India-US tax treaty, the India-UK tax treaty and certain other treaties do not provide relief from such taxation.

In case of investors situated in a country where treaty relief is available against such taxation, it would be important to note that requirements with respect to obtaining a TRC, submitting certain additional information and filing tax returns (as outlined above) would also be applicable to such Shareholders claiming tax treaty relief.

Taxation of Shareholders

For investors in the Fund who are tax residents outside India and who do not carry on any business activities in India, there should be no Indian income tax implications on distributions received from the Fund. However, where shares in the Fund are sold by the investors, gains from such transfer could be subject to tax in India as outlined under the heading *Taxation of Indirect Transfer of Indian Assets* above, subject to applicable tax treaty relief.

Please note that the above description is based on current provisions of Mauritius and Indian law, and any change or modification made by subsequent legislation, regulation, or administrative or judicial decision could increase the Indian tax liability of the Subsidiary and thus reduce the return to Fund shareholders.

Compliance with the Foreign Account Tax Compliance Act. On September 27, 2013, the Government of Mauritius and the Government of the United States signed an Agreement for the Exchange of Information Relating to Taxes (the Agreement) to set the legal framework to enable the exchange of tax information between the two countries. That was followed by the signing of another agreement known as the Inter-Governmental Agreement (the Model 1 IGA) to improve international tax compliance and to implement FATCA. The Agreement provides for the exchange of tax information (upon request, spontaneous and automatic) between Mauritius and the US. The Model 1 IGA provides for the automatic reporting and exchange of information in relation to financial accounts held with Mauritius Financial Institutions by U.S. account holders and the reciprocal exchange of information regarding U.S. accounts held by Mauritius residents. According to the Model 1 IGA, Mauritius Financial Institutions are not subject to 30% withholding tax on US source income provided they comply with the requirements of FATCA. The Agreement for the Exchange of Information Relating to Taxes (United States of America FATCA Implementation) Regulations 2014 (the FATCA Regulations), published in the Government Gazette No. 61 of 05 July 2014 as GN 135 of 2014 will give effect to both the Agreement and the Model 1 IGA. According to section 6 of the FATCA Regulations, the Agreement will come into operation on a date to be specified by the Minister of Finance and Economic Development in a notice to be published in the Government Gazette. The notice has not yet been published in the Government Gazette.

Prevention of Money Laundering and Anti-terror Financing in Mauritius. Under the Mauritius Financial Intelligence and Anti-Money Laundering Act 2002, in Mauritius an offence of money laundering carries a fine not exceeding 2,000,000 Mauritius Rupees (approximately US\$ 69,200) and a term of imprisonment not exceeding 10 years. Consequently, the Fund will carry out a due diligence selection process, based on generally accepted industry norms, prior to accepting investors. This will include but may not be limited to: (a) applying the know your client principle by making sure that investors provide valid proof of identification; (b) maintaining records of identification information; (c) determining that potential investors are not known or suspected terrorists by checking their names against a list of known or suspected terrorists; (d) informing investors that information they provide may be used to verify their identity; and (e) monitoring investors money transactions, that is, the level of subscriptions.

To ensure compliance with the Financial Intelligence and Anti-Money Laundering Act 2002 and the Code on the Prevention of Money Laundering and Terrorist Financing (Anti Money Laundering Code) issued by the Financial Services Commission in Mauritius, an investor will be required to provide certain information/documents for the purpose of verifying the identity of the investor and source of funds and obtain confirmation that the subscription monies do not represent, directly or indirectly, the proceeds of any crime. The request for information may be exempted where an investor (other than an agent acting on behalf of underlying principals) is a regulated financial services business based in Mauritius or in an equivalent jurisdiction (that is subject to the supervision of a public authority) or in the case of public companies listed on recognized stock/investment exchanges, as set out in the Anti-Money Laundering Code.

By way of example, an individual will be required to produce a copy of a passport or identification card duly certified by a public authority such as a notary public, the police or an accountant together with evidence of his address, such as a utility bill or bank statement. In the case of corporate applicants, this may require production of a certified copy of the certificate of incorporation (and any change of name) and the memorandum and articles of association (or equivalent), and of the names and residential and business addresses of all directors and beneficial owners, the passport copies and utility bills of directors and controllers as well as due diligence on source of funds of the corporate entity. The details given above are by way of example only and the Fund may request such information and documentation as it considers necessary to verify the identity

of an investor. In the event of delay or failure on the part of an investor to produce any information required for verification purposes, the Fund may refuse to accept the application and the subscription monies relating thereto or may refuse to process a redemption request until proper information has been provided.

Egyptian Tax. Egypt has imposed a 10% tax on dividends and capital gains derived from investments in an issuer resident of Egypt. Effective July 18, 2014, each of VanEck Vectors Africa Index ETF and VanEck Vectors Egypt Index ETF began reserving 10% of its unrealized gains from its Egyptian investments to meet this tax liability. The tax reserve is reflected in each of VanEck Vectors Africa Index ETF's and VanEck Vectors Egypt Index ETF's daily NAV calculations as a deduction from the Fund's NAV. Egyptian tax laws and regulations and interpretations thereof may be revised or amended in the future and may be applied retroactively.

INDEX PROVIDERS

The Africa Index, Brazil Small-Cap Index, Egypt Index, India Small-Cap Index, Indonesia Index, Poland Index, Russia Index, Russia Small-Cap Index and Vietnam Index are published by MV Index Solutions GmbH (MVIS), which is a wholly owned subsidiary of the Adviser.

The Israel Index is published by BlueStar Global Investors, LLC (BlueStar).

BlueStar and MVIS are referred to herein as the Index Providers. The Index Providers do not sponsor, endorse, or promote the Funds and bear no liability with respect to the Funds or any security.

MVIS™ GDP AFRICA INDEX

The Africa Index is a rules based, modified capitalization weighted, float adjusted index and is intended to give investors a means of tracking the overall performance of the publicly traded companies in Africa. The Africa Index includes local listings of companies that are incorporated in Africa and offshore listings of companies incorporated outside of Africa but that have African exposure. Countries are considered for inclusion based upon gross domestic product (GDP).

To be initially eligible for the Africa Index, (i) offshore companies must generate at least 50% of their revenues (or, where applicable, have at least 50% of their assets) in Africa and (ii) all stocks must have a market capitalization of greater than \$150 million as of the end of the month prior to which a rebalancing date occurs.

As of December 31, 2015, the Africa Index included 89 securities of companies with a market capitalization range of between approximately \$510 million and \$57.4 billion and a weighted average market capitalization of \$7.34 billion. These amounts are subject to change.

The Africa Index is the exclusive property of MVIS (a wholly owned subsidiary of the Adviser), which has contracted with Solactive AG to maintain and calculate the Africa Index. Solactive AG uses its best efforts to ensure that the Africa Index is calculated correctly. Irrespective of its obligations towards MVIS, Solactive AG has no obligation to point out errors in the Africa Index to third parties. VanEck Vectors Africa Index ETF is not sponsored, endorsed, sold or promoted by MVIS and MVIS makes no representation regarding the advisability of investing in VanEck Vectors Africa Index ETF.

The Africa Index is reconstituted and rebalanced quarterly.

MVIS™ BRAZIL SMALL-CAP INDEX

The Brazil Small-Cap Index is a rules based, modified capitalization weighted, float adjusted index intended to give investors a means of tracking the overall performance of publicly traded small-cap companies that are incorporated in Brazil or that are incorporated outside of Brazil but that have Brazilian exposure.

To be initially eligible for the Brazil Small-Cap Index, (i) offshore companies must generate at least 50% of their revenues (or, where applicable, have at least 50% of their assets) in Brazil and (ii) all stocks must have a market capitalization of greater than \$150 million as of the end of the month prior to which a rebalancing date occurs.

As of December 31, 2015, the Brazil Small-Cap Index included 61 securities of companies with a market capitalization range of between approximately \$120 million and \$1.5 billion and a weighted average market capitalization of \$750 million. These amounts are subject to change.

The Brazil Small-Cap Index is the exclusive property of MVIS (a wholly owned subsidiary of the Adviser), which has contracted with Solactive AG to maintain and calculate the Brazil Small-Cap Index. Solactive AG uses its best efforts to ensure that the Brazil Small-Cap Index is calculated correctly. Irrespective of its obligations towards MVIS, Solactive AG has no obligation to point out errors in the Brazil Small-Cap Index to third parties. VanEck Vectors Brazil Small-Cap ETF is not sponsored, endorsed, sold or promoted by MVIS and MVIS makes no representation regarding the advisability of investing in VanEck Vectors Brazil Small-Cap ETF.

The Brazil Small-Cap Index is reconstituted and rebalanced quarterly.

MVIS™ EGYPT INDEX

The Egypt Index is a rules based, modified capitalization weighted, float adjusted index intended to give investors a means of tracking the overall performance of publicly traded companies that are incorporated in Egypt or that are incorporated outside of Egypt but that have Egyptian exposure.

To be initially eligible for the Egypt Index, (i) offshore companies must generate at least 50% of their revenues (or, where applicable, have at least 50% of their assets) in Egypt and (ii) all stocks must have a market capitalization of greater than \$150 million as of the end of the month prior to which a rebalancing date occurs.

As of December 31, 2015, the Egypt Index included 26 securities of companies with a market capitalization range of between approximately \$100 million and \$4.9 billion and a weighted average market capitalization of \$1.2 billion. These amounts are subject to change.

The Egypt Index is the exclusive property of MVIS (a wholly owned subsidiary of the Adviser), which has contracted with Solactive AG to maintain and calculate the Egypt Index. Solactive AG uses its best efforts to ensure that the Egypt Index is calculated correctly. Irrespective of its obligations towards MVIS, Solactive AG has no obligation to point out errors in the Egypt Index to third parties. VanEck Vectors Egypt Index ETF is not sponsored, endorsed, sold or promoted by MVIS and MVIS makes no representation regarding the advisability of investing in VanEck Vectors Egypt Index ETF.

The Egypt Index is reconstituted and rebalanced quarterly.

MVIS™ INDIA SMALL-CAP INDEX

The India Small-Cap Index is a rules based, modified capitalization weighted, float adjusted index intended to give investors a means of tracking the overall performance of publicly traded small-cap companies that are incorporated in India or that are incorporated outside of India but that have Indian exposure.

To be initially eligible for the India Small-Cap Index, (i) offshore companies must generate at least 50% of their revenues (or, where applicable, have at least 50% of their assets) in India and (ii) all stocks must have a market capitalization of greater than \$150 million as of the end of the month prior to which a rebalancing date occurs.

As of December 31, 2015, the India Small-Cap Index included 141 securities of companies with a market capitalization range of between approximately \$120 million and \$1.2 billion and a weighted average market capitalization of \$570 million. These amounts are subject to change.

The India Small-Cap Index is the exclusive property of MVIS (a wholly owned subsidiary of the Adviser), which has contracted with Solactive AG to maintain and calculate the India Small-Cap Index. Solactive AG uses its best efforts to ensure that the India Small-Cap Index is calculated correctly. Irrespective of its obligations towards MVIS, Solactive AG has no obligation to point out errors in the India Small-Cap Index to third parties. VanEck Vectors India Small-Cap Index ETF is not sponsored, endorsed, sold or promoted by MVIS and MVIS makes no representation regarding the advisability of investing in VanEck Vectors India Small-Cap Index ETF.

The India Small-Cap Index is reconstituted and rebalanced quarterly.

MVIS™ INDONESIA INDEX

The Indonesia Index is a rules based, modified capitalization weighted, float adjusted index intended to give investors a means of tracking the overall performance of publicly traded companies that are incorporated in Indonesia or that are incorporated outside of Indonesia but that have Indonesian exposure.

To be initially eligible for the Indonesia Index, (i) offshore companies must generate at least 50% of their revenues (or, where applicable, have at least 50% of their assets) in Indonesia and (ii) all stocks must have a market capitalization of greater than \$150 million as of the end of the month prior to which a rebalancing date occurs.

As of December 31, 2015, the Indonesia Index included 44 securities of companies with a market capitalization range of between approximately \$490 million and \$23.8 billion and a weighted average market capitalization of \$10.5 billion. These amounts are subject to change.

The Indonesia Index is the exclusive property of MVIS (a wholly owned subsidiary of the Adviser), which has contracted with Solactive AG to maintain and calculate the Indonesia Index. Solactive AG uses its best efforts to ensure that the Indonesia Index is calculated correctly. Irrespective of its obligations towards MVIS, Solactive AG has no obligation to point out errors in the Indonesia Index to third parties. VanEck Vectors Indonesia Index ETF is not sponsored, endorsed, sold or promoted by MVIS and MVIS makes no representation regarding the advisability of investing in the VanEck Vectors Indonesia Index ETF.

The Indonesia Cap Index is reconstituted and rebalanced quarterly.

BLUESTAR ISRAEL GLOBAL INDEX™

The Israel Index is a rules based, modified capitalization, float adjusted weighted index comprised of equity securities, which may include depositary receipts, of publicly traded companies that are generally considered by the Index Provider to be Israeli companies. The Index Provider considers a range of factors such as domicile, country of company formation/founding, primary location of management, operations and/or research and development facilities, tax status, location of revenues and employees, among other things, when determining whether a company will be included in the Israel Index.

For a company to be considered part of the Israel Index, it must meet at least one quantitative criterion and/or at least two qualitative criteria, below, as decided upon by the BlueStar Index Advisory Committee. If a company meets this requirement, it will be considered an Israeli company and part of the universe of Israeli global equities.

Quantitative criteria:

- 1) The company is listed on the Tel Aviv Stock Exchange.
- 2) The company's tax status is in Israel.
- 3) The company is headquartered in Israel.
- 4) The company generates at least 50% of its revenues or at least 50% of its operating expenses are derived from operations in Israel.

Qualitative criteria:

- 1) The company was founded or formed in Israel.
- 2) The company has major management, operational, logistical, or R&D facilities in Israel.
- 3) The company has a majority of its board of directors or at least two executives domiciled in Israel.
- 4) The company's business results would be materially altered without its Israel based assets. These assets may include, but are not limited to: intellectual and human capital, or licenses to Israeli technology that materially affect revenue or R&D
- 5) The company is a subsidiary or non-Israel operating branch of an Israeli company that meets at least one of the quantitative criteria described above.

The Israel Index generally only includes the largest and most liquid companies as well mid-cap and small-cap companies that display sufficient liquidity for global investors. Companies are added or removed by BlueStar Indexes and the International Securities Exchange (ISE) based on the methodology described below. Each component security must not be listed on an exchange in a country which employs restrictions on foreign capital investment such that those restrictions render the component effectively non-investible, as determined by the ISE and BlueStar Indexes. The Israel Index does not consider exchange-listed limited partnerships to be part of the investable universe of Israeli companies. In cases where a limited partnership's parent company is included in the Index, the free-float weight of the limited partnership will be added to the parent company's weight. Constituent stocks of the Israel Index must have a float-adjusted market capitalization of at least \$75 million on a rebalancing date to be eligible for the Israel Index. Stocks whose market capitalizations fall below \$75 million as of any rebalancing date will no longer be eligible for the Israel Index. Stocks must have a minimum six-month average daily trading volume of at least \$250,000 to be eligible for the Israel Index. No single component stock represents more than 12.5% of the weight of the Israel Index. Should a component represent greater than 12.5% of the weight of the Israel Index, the weight shall be modified such that it represents no more than 12.5% of the Israel Index at the conclusion of rebalance periods. The cumulative weight of all components with an individual weight of 5% or greater may not in the aggregate account for more than 50% of the weight of the Israel Index. This particular requirement will be satisfied at the conclusion of the Israel Index's semi-annual rebalance periods.

As of December 31, 2015, the Israel Index included 113 securities of companies with a market capitalization range of between approximately \$71 million and \$67 billion and a weighted average market capitalization of \$14 billion. These amounts are subject to change.

The Israel Index is the exclusive property of BlueStar Indexes, and is calculated and maintained by Standard & Poor's based on a methodology developed by BlueStar Indexes and the ISE in consultation with Standard & Poor's. The Israel Index is calculated on an end-of-day basis. Information on the Israel Index is freely available on the website of BlueStar Indexes at www.BlueStarIndexes.com, and the Israel Index is freely available on ISE's website, <http://www.ise.com/etf-ventures/indexdata/bluestar-israel-global-index-bls/>.

The Israel Index is reconstituted semi-annually in June and December of each year. Component changes are made after the close on the third Friday of June and December, and become effective at the opening on the next trading day. Companies are added and/or deleted based upon the Israel Index eligibility criteria described above. BlueStar maintains a watch list of securities that might be eligible for inclusion. This list is available on BlueStar's website. Whenever possible, BlueStar and ISE will publicly announce changes to the Israel Index on ISE's publicly available website at least five trading days prior to the effective date.

MVIS™ POLAND INDEX

The Poland Index is a rules based, modified capitalization weighted, float adjusted index intended to give investors a means of tracking the overall performance of publicly traded companies that are incorporated in Poland or that are incorporated outside of Poland but that have Polish exposure.

To be initially eligible for the Poland Index, (i) offshore companies must generate at least 50% of their revenues (or, where applicable, have at least 50% of their assets) in Poland and (ii) all stocks must have a market capitalization of greater than \$150 million as of the end of the month prior to which a rebalancing date occurs.

As of December 31, 2015, the Poland Index included 26 securities of companies with a market capitalization range of between approximately \$320 million and \$9.5 billion and a weighted average market capitalization of \$4.9 billion. These amounts are subject to change.

The Poland Index is the exclusive property of MVIS (a wholly owned subsidiary of the Adviser), which has contracted with Solactive AG to maintain and calculate the Poland Index. Solactive AG uses its best efforts to ensure that the Poland Index is calculated correctly. Irrespective of its obligations towards MVIS, Solactive AG has no obligation to point out errors in the Poland Index to third parties. VanEck Vectors Poland ETF is not sponsored, endorsed, sold or promoted by MVIS and MVIS makes no representation regarding the advisability of investing in VanEck Vectors Poland ETF.

The Poland Index is reconstituted and rebalanced quarterly.

MVIS™ RUSSIA INDEX

The Russia Index is a rules based, modified capitalization weighted, float adjusted index intended to give investors a means of tracking the overall performance of publically traded companies that are incorporated in Russia or that are incorporated outside of Russia but that have Russian exposure.

To be initially eligible for the Russia Index, (i) offshore companies must generate at least 50% of their revenues (or, where applicable, have at least 50% of their assets) in Russia and (ii) all stocks must have a market capitalization of greater than \$150 million as of the end of the month prior to which a rebalancing date occurs.

As of December 31, 2015, the Russia Index included 28 securities of companies with a market capitalization range of between approximately \$2.7 billion and \$43.7 billion and a weighted average market capitalization of \$16.9 billion. These amounts are subject to change.

The Russia Index is the exclusive property of MVIS (a wholly owned subsidiary of the Adviser), which has contracted with Solactive AG to maintain and calculate the Russia Index. Solactive AG uses its best efforts to ensure that the Russia Index is calculated correctly. Irrespective of its obligations towards MVIS, Solactive AG has no obligation to point out errors in the Russia Index to third parties. VanEck Vectors Russia ETF is not sponsored, endorsed, sold or promoted by MVIS and MVIS makes no representation regarding the advisability of investing in the VanEck Vectors Russia ETF.

The Russia Index is reconstituted and rebalanced quarterly.

MVIS™ RUSSIA SMALL-CAP INDEX

The Russia Small-Cap Index is a rules based, modified capitalization weighted, float adjusted index intended to give investors a means of tracking the overall performance of publicly traded small-capitalization companies that are incorporated in Russia or that are incorporated outside of Russia but that have Russian exposure.

To be initially eligible for the Russia Small-Cap Index, (i) offshore companies must generate at least 50% of their revenues (or, where applicable, have at least 50% of their assets) in Russia and (ii) all stocks must have a market capitalization of greater than \$150 million as of the end of the month prior to which a rebalancing date occurs.

As of December 31, 2015, the Russia Small-Cap Index included 26 securities of companies with a market capitalization range of between approximately \$150 million and \$4.1 billion with a weighted average market capitalization of \$1.3 billion. These amounts are subject to change.

The Russia Small-Cap Index is the exclusive property of MVIS (a wholly owned subsidiary of the Adviser), which has contracted with Solactive AG to maintain and calculate the Russia Small-Cap Index. Solactive AG uses its best efforts to ensure that the Russia Small-Cap Index is calculated correctly. Irrespective of its obligations towards MVIS, Solactive AG has no obligation to point out errors in the Russia Small-Cap Index to third parties. VanEck Vectors Russia Small-Cap ETF is not sponsored, endorsed, sold or promoted by MVIS and MVIS makes no representation regarding the advisability of investing in VanEck Vectors Russia Small-Cap ETF.

The Russia Small-Cap Index is reconstituted and rebalanced quarterly.

MVIS™ VIETNAM INDEX

The Vietnam Index is a rules based, modified capitalization weighted, float adjusted index intended to give investors a means of tracking the overall performance of publically traded companies that are incorporated in Vietnam or that are incorporated outside of Vietnam but that have Vietnamese exposure.

To be initially eligible for the Vietnam Index, (i) offshore companies must generate at least 50% of their revenues (or, where applicable, have at least 50% of their assets) in Vietnam and (ii) all stocks must have a market capitalization of greater than \$150 million as of the end of the month prior to which a rebalancing date occurs.

As of December 31, 2015, the Vietnam Index included 25 securities of companies with a market capitalization range of between approximately \$120 million and \$5.2 billion and a weighted average market capitalization of \$1.4 billion. These amounts are subject to change.

The Vietnam Index is the exclusive property of MVIS (a wholly owned subsidiary of the Adviser), which has contracted with Solactive AG to maintain and calculate the Vietnam Index. Solactive AG uses its best efforts to ensure that the Vietnam Index is calculated correctly. Irrespective of its obligations towards MVIS, Solactive AG has no obligation to point out errors in the Vietnam Index to third parties. VanEck Vectors Vietnam ETF is not sponsored, endorsed, sold or promoted by MVIS and MVIS makes no representation regarding the advisability of investing in VanEck Vectors Vietnam ETF.

The Vietnam Index is reconstituted and rebalanced quarterly.

LICENSE AGREEMENTS AND DISCLAIMERS

The Adviser has entered into a licensing agreement with MVIS to use each of the Africa Index, Brazil Small-Cap Index, Egypt Index, India Small-Cap Index, Indonesia Index, Poland Index, Russia Index, Russia Small-Cap Index and Vietnam Index. Each of VanEck Vectors Africa Index ETF, VanEck Vectors Brazil Small-Cap ETF, VanEck Vectors Egypt Index ETF, VanEck Vectors India Small-Cap Index ETF, VanEck Vectors Indonesia Index ETF, VanEck Vectors Poland ETF, VanEck Vectors Russia ETF, VanEck Vectors Russia Small-Cap ETF and VanEck Vectors Vietnam ETF is entitled to use its Index pursuant to a sub-licensing arrangement with the Adviser.

The Shares of VanEck Vectors Africa Index ETF, VanEck Vectors Brazil Small-Cap ETF, VanEck Vectors Egypt Index ETF, VanEck Vectors India Small-Cap Index ETF, VanEck Vectors Indonesia Index ETF, VanEck Vectors Poland ETF, VanEck Vectors Russia ETF, VanEck Vectors Russia Small-Cap ETF and VanEck Vectors Vietnam ETF are not sponsored, endorsed, sold or promoted by MVIS. MVIS makes no representation or warranty, express or implied, to the owners of Shares of VanEck Vectors Africa Index ETF, VanEck Vectors Brazil Small-Cap ETF, VanEck Vectors Egypt Index ETF, VanEck Vectors India Small-Cap Index ETF, VanEck Vectors Indonesia Index ETF, VanEck Vectors Poland ETF, VanEck Vectors Russia ETF, VanEck Vectors Russia Small-Cap ETF and VanEck Vectors Vietnam ETF or any member of the public regarding the advisability of investing in securities generally or in the Shares of VanEck Vectors Africa Index ETF, VanEck Vectors Brazil Small-Cap ETF, VanEck Vectors Egypt Index ETF, VanEck Vectors India Small-Cap Index ETF, VanEck Vectors Indonesia Index ETF, VanEck Vectors Poland ETF, VanEck Vectors Russia ETF, VanEck Vectors Russia Small-Cap ETF and VanEck Vectors Vietnam ETF particularly or the ability of the Africa Index, Brazil Small-Cap Index, Egypt Index, India Small-Cap Index, Indonesia Index, Poland Index, Russia Index, Russia Small-Cap Index and Vietnam Index to track the performance of its respective securities market. MVIS's only relationship to the Adviser is the licensing of certain service marks and trade names and of the Africa Index, Brazil Small-Cap Index, Egypt Index, India Small-Cap Index, Indonesia Index, Poland Index, Russia Index, Russia Small-Cap Index and Vietnam Index that is determined, composed and calculated by MVIS without regard to the Adviser or the Shares of VanEck Vectors Africa Index ETF, VanEck Vectors Brazil Small-Cap ETF, VanEck Vectors Egypt Index ETF, VanEck Vectors India Small-Cap Index ETF, VanEck Vectors Indonesia Index ETF, VanEck Vectors Poland ETF, VanEck Vectors Russia ETF, VanEck Vectors Russia Small-Cap ETF and VanEck Vectors Vietnam ETF. MVIS has no obligation to take the needs of the Adviser or the owners of Shares of VanEck Vectors Africa Index ETF, VanEck Vectors Brazil Small-Cap ETF, VanEck Vectors Egypt Index ETF, VanEck Vectors India Small-Cap Index ETF, VanEck Vectors Indonesia Index ETF, VanEck Vectors Poland ETF, VanEck Vectors Russia ETF, VanEck Vectors Russia Small-Cap ETF and VanEck Vectors Vietnam ETF into consideration in determining, composing or calculating the Africa Index, Brazil Small-Cap Index, Egypt Index, India Small-Cap Index, Indonesia Index, Poland Index, Russia Index, Russia Small-Cap Index and Vietnam Index. MVIS is not responsible for and has not participated in the determination of the timing of, prices at, or quantities of the Shares of VanEck Vectors Africa Index ETF, VanEck Vectors Brazil Small-Cap ETF, VanEck Vectors Egypt Index ETF, VanEck Vectors India Small-Cap Index ETF, VanEck Vectors Indonesia Index ETF, VanEck Vectors Poland ETF, VanEck Vectors Russia ETF, VanEck Vectors Russia Small-Cap ETF and VanEck Vectors Vietnam ETF to be issued or in the determination or calculation of the equation by which the Shares of VanEck Vectors Africa Index ETF, VanEck Vectors Brazil Small-Cap ETF, VanEck Vectors Egypt Index ETF, VanEck Vectors India Small-Cap Index ETF, VanEck Vectors Indonesia Index ETF, VanEck Vectors Poland ETF, VanEck Vectors Russia ETF, VanEck Vectors Russia Small-Cap ETF and VanEck Vectors Vietnam ETF are to be converted into cash. MVIS has no obligation or liability in connection with the administration, marketing or trading of the Shares of VanEck Vectors Africa Index ETF, VanEck Vectors Brazil Small-Cap ETF, VanEck Vectors Egypt Index ETF, VanEck Vectors India Small-Cap Index ETF, VanEck Vectors Indonesia Index ETF, VanEck Vectors Poland ETF, VanEck Vectors Russia ETF, VanEck Vectors Russia Small-Cap ETF and VanEck Vectors Vietnam ETF.

MVIS DOES NOT GUARANTEE THE ACCURACY AND/OR THE COMPLETENESS OF THE AFRICA INDEX, BRAZIL SMALL-CAP INDEX, EGYPT INDEX, INDIA SMALL-CAP INDEX, INDONESIA INDEX, POLAND INDEX, RUSSIA INDEX, RUSSIA SMALL-CAP INDEX AND VIETNAM INDEX OR ANY DATA INCLUDED THEREIN AND MVIS SHALL HAVE NO LIABILITY FOR ANY ERRORS, OMISSIONS, OR INTERRUPTIONS THEREIN. MVIS MAKES NO WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY THE ADVISER, OWNERS OF SHARES OF VANECK VECTORS AFRICA INDEX ETF, VANECK VECTORS BRAZIL SMALL-CAP ETF, VANECK VECTORS EGYPT INDEX ETF, VANECK VECTORS INDIA SMALL-CAP INDEX ETF, VANECK VECTORS INDONESIA INDEX ETF, VANECK VECTORS POLAND ETF, VANECK VECTORS RUSSIA ETF, VANECK VECTORS RUSSIA SMALL-CAP ETF AND VANECK VECTORS VIETNAM ETF, OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE AFRICA INDEX, BRAZIL SMALL-CAP INDEX, EGYPT INDEX, INDIA SMALL-CAP INDEX, INDONESIA INDEX, POLAND INDEX, RUSSIA INDEX, RUSSIA SMALL-CAP INDEX AND VIETNAM INDEX OR ANY DATA INCLUDED THEREIN. MVIS MAKES NO EXPRESS OR IMPLIED WARRANTIES, AND EXPRESSLY DISCLAIMS ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE WITH RESPECT TO THE AFRICA INDEX, BRAZIL SMALL-CAP INDEX, EGYPT INDEX, INDIA SMALL-CAP INDEX, INDONESIA INDEX, POLAND INDEX, RUSSIA INDEX, RUSSIA SMALL-CAP INDEX AND VIETNAM INDEX OR ANY DATA INCLUDED THEREIN. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT SHALL MVIS HAVE ANY LIABILITY FOR ANY SPECIAL, PUNITIVE,

INDIRECT, OR CONSEQUENTIAL DAMAGES (INCLUDING LOST PROFITS), EVEN IF NOTIFIED OF THE POSSIBILITY OF SUCH DAMAGES.

The Shares of VanEck Vectors Africa Index ETF, VanEck Vectors Brazil Small-Cap ETF, VanEck Vectors Egypt Index ETF, VanEck Vectors India Small-Cap Index ETF, VanEck Vectors Indonesia Index ETF, VanEck Vectors Poland ETF, VanEck Vectors Russia ETF, VanEck Vectors Russia Small-Cap ETF and VanEck Vectors Vietnam ETF are not sponsored, promoted, sold or supported in any other manner by Solactive AG nor does Solactive AG offer any express or implicit guarantee or assurance either with regard to the results of using the Africa Index, Brazil Small-Cap Index, Egypt Index, India Small-Cap Index, Indonesia Index, Poland Index, Russia Index, Russia Small-Cap Index and Vietnam Index and/or its trade mark or its price at any time or in any other respect. The Africa Index, Brazil Small-Cap Index, Egypt Index, India Small-Cap Index, Indonesia Index, Poland Index, Russia Index, Russia Small-Cap Index and Vietnam Index are calculated and maintained by Solactive AG. Solactive AG uses its best efforts to ensure that the Africa Index, Brazil Small-Cap Index, Egypt Index, India Small-Cap Index, Indonesia Index, Poland Index, Russia Index, Russia Small-Cap Index and Vietnam Index are calculated correctly. Irrespective of its obligations towards MVIS, Solactive AG has no obligation to point out errors in the Africa Index, Brazil Small-Cap Index, Egypt Index, India Small-Cap Index, Indonesia Index, Poland Index, Russia Index, Russia Small-Cap Index and Vietnam Index to third parties including but not limited to investors and/or financial intermediaries of VanEck Vectors Africa Index ETF, VanEck Vectors Brazil Small-Cap ETF, VanEck Vectors Egypt Index ETF, VanEck Vectors India Small-Cap Index ETF, VanEck Vectors Indonesia Index ETF, VanEck Vectors Poland ETF, VanEck Vectors Russia ETF, VanEck Vectors Russia Small-Cap ETF and VanEck Vectors Vietnam ETF. Neither publication of the Africa Index, Brazil Small-Cap Index, Egypt Index, India Small-Cap Index, Indonesia Index, Poland Index, Russia Index, Russia Small-Cap Index and Vietnam Index by Solactive AG nor the licensing of the Africa Index, Brazil Small-Cap Index, Egypt Index, India Small-Cap Index, Indonesia Index, Poland Index, Russia Index, Russia Small-Cap Index and Vietnam Index or its trade mark for the purpose of use in connection with the VanEck Vectors Africa Index ETF, VanEck Vectors Brazil Small-Cap ETF, VanEck Vectors Egypt Index ETF, VanEck Vectors India Small-Cap Index ETF, VanEck Vectors Indonesia Index ETF, VanEck Vectors Poland ETF, VanEck Vectors Russia ETF, VanEck Vectors Russia Small-Cap ETF and VanEck Vectors Vietnam ETF constitutes a recommendation by Solactive AG to invest capital in VanEck Vectors Africa Index ETF, VanEck Vectors Brazil Small-Cap ETF, VanEck Vectors Egypt Index ETF, VanEck Vectors India Small-Cap Index ETF, VanEck Vectors Indonesia Index ETF, VanEck Vectors Poland ETF, VanEck Vectors Russia ETF, VanEck Vectors Russia Small-Cap ETF and VanEck Vectors Vietnam ETF nor does it in any way represent an assurance or opinion of Solactive AG with regard to any investment in VanEck Vectors Africa Index ETF, VanEck Vectors Brazil Small-Cap ETF, VanEck Vectors Egypt Index ETF, VanEck Vectors India Small-Cap Index ETF, VanEck Vectors Indonesia Index ETF, VanEck Vectors Poland ETF, VanEck Vectors Russia ETF, VanEck Vectors Russia Small-Cap ETF and VanEck Vectors Vietnam ETF. Solactive AG is not responsible for fulfilling the legal requirements concerning the accuracy and completeness of VanEck Vectors Africa Index ETF, VanEck Vectors Brazil Small-Cap ETF, VanEck Vectors Egypt Index ETF, VanEck Vectors India Small-Cap Index ETF, VanEck Vectors Indonesia Index ETF, VanEck Vectors Poland ETF, VanEck Vectors Russia ETF, VanEck Vectors Russia Small-Cap ETF and VanEck Vectors Vietnam ETF s Prospectus.

FINANCIAL HIGHLIGHTS

The financial highlights tables which follow are intended to help you understand the Funds' financial performance for the past five years or as indicated. Certain information reflects financial results for a single Fund share. The total returns in the table represent the rate that an investor would have earned (or lost) on an investment in a Fund (assuming reinvestment of all dividends and distributions). This information has been audited by Ernst & Young LLP, the Trust's independent registered public accounting firm, whose report, along with the Funds' financial statements, are included in the Funds' Annual Report, which is available upon request.

- (a) Commencement of operations
- (b) Total return is calculated assuming an initial investment made at the net asset value at the beginning of period, reinvestment of any dividends and distributions at net asset value on the dividend/distributions payment date and a redemption at the net asset value on the last day of the period. The return does not reflect the deduction of taxes that a shareholder would pay on Fund dividends/distributions or the redemption of Fund shares.
- (c) Annualized
- (d) Not Annualized
- # On July 1, 2013, the Fund effected a 1 for 3 reverse share split. Per share data has been adjusted to give effect to the share split.

PREMIUM/DISCOUNT INFORMATION

Information regarding how often the Shares of each Fund traded on NYSE Arca at a price above (*i.e.*, at a premium) or below (*i.e.*, at a discount) the NAV of the Fund during the past four calendar quarters, as applicable, can be found at www.vaneck.com.

GENERAL INFORMATION

CONTINUOUS OFFERING

The method by which Creation Units are created and traded may raise certain issues under applicable securities laws. Because new Creation Units are issued and sold by the Trust on an ongoing basis, a distribution, as such term is used in the Securities Act may occur at any point. Broker dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the prospectus delivery and liability provisions of the Securities Act.

For example, a broker dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the Distributor, breaks them down into constituent Shares, and sells such Shares directly to customers, or if it chooses to couple the creation of a supply of new Shares with an active selling effort involving solicitation of secondary market demand for Shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to a categorization as an underwriter.

Broker dealers who are not underwriters but are participating in a distribution (as contrasted to ordinary secondary trading transactions), and thus dealing with Shares that are part of an unsold allotment within the meaning of Section 4(3)(C) of the Securities Act, would be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. This is because the prospectus delivery exemption in Section 4(3) of the Securities Act is not available in respect of such transactions as a result of Section 24(d) of the 1940 Act. As a result, broker dealer firms should note that dealers who are not underwriters but are participating in a distribution (as contrasted with ordinary secondary market transactions) and thus dealing with the Shares that are part of an overallotment within the meaning of Section 4(3)(A) of the Securities Act would be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. Firms that incur a prospectus delivery obligation with respect to Shares are reminded that, under Rule 153 of the Securities Act, a prospectus delivery obligation under Section 5(b)(2) of the Securities Act owed to an exchange member in connection with a sale on NYSE Arca is satisfied by the fact that the prospectus is available at NYSE Arca upon request. The prospectus delivery mechanism provided in Rule 153 is only available with respect to transactions on an exchange.

In addition, certain affiliates of the Funds and the Adviser may purchase and resell Fund shares pursuant to this Prospectus.

OTHER INFORMATION

The Trust was organized as a Delaware statutory trust on March 15, 2001. Its Declaration of Trust currently permits the Trust to issue an unlimited number of Shares of beneficial interest. If shareholders are required to vote on any matters, each Share outstanding would be entitled to one vote. Annual meetings of shareholders will not be held except as required by the 1940 Act and other applicable law. See the Funds' SAI for more information concerning the Trust's form of organization. Section 12(d)(1) of the 1940 Act restricts investments by investment companies in the securities of other investment companies, including Shares of a Fund. Registered investment companies are permitted to invest in the Funds beyond the limits set forth in Section 12(d)(1) subject to certain terms and conditions set forth in an SEC exemptive order issued to the Trust, including that such investment companies enter into an agreement with the Funds.

The Prospectus, SAI and any other Fund communication do not create any contractual obligations between the Fund's shareholders and the Trust, the Fund, the Adviser and/or the Trustees. Further, shareholders are not intended third-party beneficiaries of any contracts entered into by (or on behalf of) the Fund, including contracts with the Adviser or other parties who provide services to the Fund.

Dechert LLP serves as counsel to the Trust, including the Funds. Ernst & Young LLP serves as the Trust's independent registered public accounting firm and will audit the Fund's financial statements annually.

ADDITIONAL INFORMATION

This Prospectus does not contain all the information included in the Registration Statement filed with the SEC with respect to the Funds' Shares. Information about the Funds can be reviewed and copied at the SEC's Public Reference Room and

information on the operation of the Public Reference Room may be obtained by calling the SEC at 1.202.551.8090. The Funds' Registration Statement, including this Prospectus, the Funds' SAI and the exhibits may be examined at the offices of the SEC (100 F Street, NE, Washington, DC 20549) or on the EDGAR database at the SEC's website (<http://www.sec.gov>), and copies may be obtained, after paying a duplicating fee, by electronic request at the following email address: publicinfo@sec.gov, or by writing the SEC's Public Reference Section, Washington, DC 20549-1520. These documents and other information concerning the Trust also may be inspected at the offices of NYSE Arca (20 Broad Street, New York, New York 10005).

The SAI for the Funds, which has been filed with the SEC, provides more information about the Funds. The SAI for the Funds is incorporated herein by reference and is legally part of this Prospectus. Additional information about the Funds' investments is available in each Fund's annual and semi-annual reports to shareholders. In each Fund's annual report, you will find a discussion of the market conditions and investment strategies that significantly affected the Fund's performance during its last fiscal year. The SAI and the Funds' annual and semi-annual reports may be obtained without charge by writing to the Funds at Van Eck Securities Corporation, the Funds' distributor, at 666 Third Avenue, New York, New York 10017 or by calling the distributor at the following number: Investor Information: 1.800.826.2333.

Shareholder inquiries may be directed to the Funds in writing to 666 Third Avenue, 9th Floor, New York, New York 10017 or by calling 1.800.826.2333.

The Funds' SAI is available at www.vaneck.com.

(Investment Company Act file no. 811-10325)

Edgar Filing: VanEck Vectors ETF Trust - Form 497

For more detailed information about the Funds, see the SAI dated May 1, 2016, which is incorporated by reference into this Prospectus.
